Comments

We are asking for recording of additional point of withdrawal that we have been using for about the last 15 years. It is necessary to pump our full amount when water is available in order to carry us through the time that it is not available.

The original system was two 25 H.P. pumps with a 15 H.P. lift pump putting water to them. The level of the stream is about 40 ft. down from the farmground level. We changed to a 15 H.P. pump for lower water and a 10 H.P. lift pump with 40 H.P. pump for higher water and getting the water to our highest hills (105 ft. up). This was designed to save on energy, plus give us more flexibility on amount of water pumped. It turned out that the 40 H.P. pump couldn't pump our top amount of water, so we added a 10 H.P. pump at the point of withdrawal in the application in order to supplement.

We already had metered electricity nearby, so it saved us installing a whole new station at the original point of withdrawal. Also, when water was very low, we had to drive a mile each time we needed to check the situation, in order to keep the pump from running dry. This new point is right across the road from the farmstead.
