Course Description:

Biological evidence has played a major role in helping to solve cold cases, identify individuals, and provide leads in homicide, sexual assault, and burglary cases. Crime scene investigators, criminal investigators, and district attorney investigators each play a vital role in the collection and/or presentation of biological evidence recovered in a criminal case. However, these different types of investigators are often compartmentalized and are not aware of the upstream or downstream role biological evidence plays in the overall investigation.

The purpose of this course is to teach investigators what, why, and how evidence is processed. It will also focus on various types of criminal incidents and how to more effectively use the laboratory analysis to further their investigation. This interactive course is 24 hours in length, addressing the role biological evidence plays in a criminal investigation from crime scene to courtroom.

Target Audience: Detectives, Crime Scene Personnel, DA Investigators
Tuition: FREE to ALL agencies **Space is limited register early**
NEW Date: February 10-12, 2014

Oakland Police Department received federal funds from the National Institute of Justice to provide forensic training to law enforcement partners. This course is funded under support of cooperative agreement 2011-MU-BX-K572.
