

Forensic Statement Analysis

~ The key in Deception Detection...

A key every Investigator needs...

Forensic Statement Analysis is a tool that is highly effective in the detection of deception hidden in a person's written or spoken statement.

Attendees will discover the techniques of critically examining the word choice, structure, and content of a person's statement to determine: Truth or Deception?

**This course is beneficial to Investigators of ALL types:
LE, Fire, Background, Private, Insurance, etc.**

Research by experts in the fields of language, psychology and deception detection has led to the identification of these trends in language that are referred to as "linguistic signals". Using Forensic Statement Analysis (series of layered techniques) you will identify these linguistic signals that differentiate deceptive statements from truthful ones as your suspect subconsciously reveals information they did not intend for you to know. This course is very interactive with significant hands-on, statement analysis practice.

This IS NOT Handwriting Analysis.

Participants remark that our courses are the "best they've ever attended", and are "well prepared, presented, and structured."
