Open Source Intelligence Techniques for Domestic/Sexual Violence, Stalking and Trafficking Investigations With Michael Bazzell

This 2-day training identifies and demonstrates over 150 free online resources that can aid internet researchers in solving both technical and non-technical investigations. Participants will be shown how to "dig" into the internet for personal information about any target. While popular sites such as Twitter, Instagram, and Facebook are covered in detail (including techniques that legally access some "private" content), the training goes much deeper into the vast resources available online for researching personal information.
