- ✓ Civil Liability Issues & Settlement Agreements
- ✓ Officer Rights and Union Representation
- ✓ Administrative Procedures

Government ID Required at the Door

While most police administrators are aware that traffic crashes are the leading killer of cops, many are left scratching their heads as to what to do about it. This two-day course identifies the key components of an effective crash prevention program. Officer involved collisions are not “a cost of doing business”. These tragedies can be prevented with proper training, supervision, and investigation.

This training is appropriate for patrol officers, supervisors, command staff, collision investigators, EVOC instructors, union board members, and risk managers. The material is presented through the use of scenarios that replicate current case law and real collisions. We guarantee that students will leave this course armed with the information they need to develop or improve your collision prevention program.
