Digital Video Evidence Recovery

Workshop Outline

In 2016, on Saturday September 17 at 8:30 PM an explosion occurs on West 23rd Street in the Chelsea neighborhood of New York City. Twenty-nine people were injured in the explosion. A second potential device was located on West 27th street which was safely removed and analyzed. Video surveillance was retrieved from the surrounding areas and released with requests for the public's assistance in identifying an individual that was seen in the area where the explosion and second device was found. Shortly thereafter, a bar owner sees and recognizes the person in the released images and calls police. The suspect is arrested Monday, September 19.

The Digital Video Evidence Recovery workshop is designed to aid the investigator in understanding the best practices for recovering video evidence from DVRs. Methods of recovering digital video evidence will be discussed and demonstrated. Additionally available tools for recovering video evidence will be shown as well as the must haves for a digital video evidence retrieval kit.

This workshop is appropriate for first responders, crime scene specialists, criminal investigators, and forensic video analysts who recover, review and/or analyze video evidence from Digital Video Security Systems. Numerous hands-on exercises utilizing a variety of DVRs will emphasize the complex nature of retrieving video evidence from these systems. The workshop utilizes over 700 pounds of video equipment to demonstrate effective and efficient retrieval methods with a wide variety of system tools.

Learn how to be prepared for the next case with digital video evidence. Attend the Digital Video Evidence Recovery Seminar presented by Resolution Video to find out how!

In this course students will learn:

- Basic technology of digital video security systems
- Recovery guidelines and best practices for working with digital video systems
- Tools available for the recovery of video evidence
- Evidence recovery workflow
- Verification techniques for digital video evidence
