22. Reforestation. Check the appropriate box(es).

☑️ Planting. Tree Species: Conifer

☐ Natural. Include a Natural Regeneration Plan

☐ Not required because of one or more of the following:

☐ I am converting some or all of this land to non-forest land in the next 3 years or lands are exempted under WAC 222-34-050.

☐ Individual dead, dying, down, or wind-thrown trees will be salvaged.

☐ Trees are removed under a thinning program reasonably expected to maximize the long-term productivity of commercial timber.

☐ I am leaving at least 100 vigorous, undamaged, and well-distributed saplings or merchantable trees per acre.

☐ An average of 190 tree seedlings per acre are established on the harvest area and my harvest will not damage it.

☐ Road right-of-way or rock pit development harvest only.

**** If you own MORE than 80 forested acres in Washington, skip to Question 27 ****

23. Are you using the exempt 20-acre parcel riparian management zone (RMZ) rule on type S, F, or Np waters?

☐ No If no, continue to Question 27.

☐ Yes If yes, continue to Question 24. See instructions for qualifications and information.

24. Choose the answer below that best fits your situation. Show all RMZs on the Activity Map.

☐ a. ALL of the following apply to me and my land: (If no, answer b.)

- Between June 5, 2006 and today's date I have always owned less than 80 acres of forestland in Washington.
- Between June 5, 2006 and today's date this parcel has always been 20 acres or less of contiguous ownership. See RCW 76.05.020 for definition of 'contiguous'.

Appendix D. Slope Stability Informational Form

Complete and attach this form to your FPA if you answered 'Yes' to FPA Question 11 or 12. Refer to WAC 222-16-050(1)(d) and Forest Practices Board Manual Section 16—Guidelines for Evaluating Potentially Unstable Slopes for definitions and descriptions of potentially unstable slopes or landforms.

1. What screening tools were used? ☑ Aerial Photo, ☑ LiDAR, ☑ Landslide Inventory, ☑ Landslide Hazard Zone Polygon, ☑ GIS/Other (describe):

2. Were there any features identified using the screening tools in #1 that did not exist in the field? If yes, describe:

Yes. The Slope Stability Layer from DNR GIS shows high instability areas scattered all across the harvest unit. Field verification however only found potential instability in certain areas—generally adjacent to tyndad waters.

3. a. What potentially unstable slopes or landforms were identified in the area of your forest practices activity? Check all that apply:
   ☑ Inner Gorge ☑ Groundwater recharge areas for glacial deep-seated landslides
   ☑ Bedrock Hollow ☑ Convergent Headwall ☑ Toe of deep-seated landslide
   ☑ Outer edges of meander bends
   ☑ Other (Deep-seated landslides or other features of potentially unstable slopes). Describe:

   b. What activities may occur in potentially unstable slopes or landforms? Check all that apply:
   ☑ Timber harvest ☑ Road construction ☑ Suspending cables ☑ Yarding ☑ Tailholds

4. a. What potentially unstable slopes or landforms were identified around the area of your forest practices activity? Check all that apply:
   ☑ Inner Gorge ☑ Groundwater recharge areas for glacial deep-seated landslides
   ☑ Bedrock Hollow ☑ Convergent Headwall ☑ Toe of deep-seated landslide
   ☑ Outer edges of meander bends
   ☑ Other (Deep-seated landslides or other features of potentially unstable slopes). Describe:

There is a shallow slide feature adjacent to the northeast corner of the harvest—clearly visible on air photos. This feature appears to have occurred as a result of poor drainage of the orphaned road grade. It appears water was concentrated into this feature and a failure occurred (from photo records it appears to have occurred between 1996 and 1998). This old grade is currently being improved with proper drainage.

   b. What activities may occur around potentially unstable slopes or landforms? Check all that apply:
   ☑ Timber harvest ☑ Road construction ☑ Suspending cables ☑ Yarding ☑ Tailholds

For use with FPA/N dated 6/1/2016 or later
5. If any features identified in #3.a. and/or #4.a. were bounded out, describe the manner in which the boundary was determined:
   Convergent topography over 70% slopes meeting the definition of inner gorge were bound out generally at the 70% slope break.
   Inner gorge features were bound out out at the 70% slope break adjacent to streams.

Appendix E. CMZ Assessment Form

Section 08, Township 28N, Range 9E

Complete and attach this informational form to your FPA/N if you answered ‘Yes’ to FPA Question 11j. Refer to Forest Practices Board Manual Section 2—Standard Methods for Identifying Bankfull Channel Features and Channel Migration Zones for guidance on evaluating Channel Migration Zones (forms within Forest Practices Board Manual 2 are optional).

Applicant Office Review:

1. Screening tools used: [ ] GIS [ ] Aerial Photo Years: see below [ ] LiDAR [ ] USGS Topographic Map
   [ ] Other (describe): years: ‘1989,’96,’98,’03,’05,’06,’09,’11,’13,’14,’15,’17

2. Are you aware of channel movement or did you observe obvious channel movement between aerial photograph years?
   [ ] No, continue to question 3  [ ] Yes, continue to question 5

3. Evaluate valley confinement using USGS topographic map(s) or aerial photographs.
   [ ] Valley floor is significantly wider than the channel. Channel migration may be occurring.
   [ ] Valley floor is very narrow, obviously less than twice as wide as the channel. If you can clearly see this circumstance on the aerial photographs, it is unlikely that channel migration is occurring.

4. Did you observe any of the following on the aerial photographs?
   [ ] Side Channels  [ ] Multiple Channels (Braiding)
   [ ] Large Gravel Bars  [ ] Wood Jams
   [ ] Eroding Banks  [ ] High Sinuosity or Sharp Channel Bends
   [ ] New Channels Occurring Between Photo Years (Avulsions)

5. If CMZ is present check the component(s) present in your CMZ delineation.
   [ ] Avulsion hazard area  [ ] Erosion hazard area (attach erosion rate calculations)

6. What was the distance of channel walked? What was the length of CMZ boundary delineated?
   Approximately 1250 feet walked. Approximately 700’ of CMZ.

Briefly describe how you determined a CMZ exists, how you delineated the outer edge of the CMZ, and how you marked the outer edge of the CMZ on the ground (flagging color, paint, etc.):

Side channels were found where bed elevations were at or below bankfull elevation of North Fork Wallace River (F1). The CMZ was delineated at the top of a ~4’ bank associated with these old side channels. Continuous old growth stumps and no side channels exist east of the delineated CMZ. This CMZ is flagged pink with “CMZ” labels.

Continuing Forest Land Obligations (RCW 76.09.060, RCW 76.09.070, RCW 76.09.390, and WAC 222-20-055)

Obligations include reforestation, road maintenance and abandonment plans, conversions of forest land to non-forestry use and/or harvest strategies on perennial non-fish habitat (Type Np) waters in Eastern Washington.

Before the sale or transfer of land or perpetual timber rights subject to continuing forest land obligations, the seller must notify the buyer of such an obligation on a form titled “Notice of Continuing Forest Land Obligation”. The seller and buyer must both sign the “Notice of Continuing Forest Land Obligation” form and send it to the DNR Region Office for retention. This form is available at DNR region offices.

If the seller fails to notify the buyer about the continuing forest land obligation, the seller must pay the buyer’s costs related to continuing forest land obligations, including all legal costs and reasonable attorneys’ fees incurred by the buyer in enforcing the continuing forest land obligation against the seller.

Failure by the seller to send the required notice to the DNR at the time of sale will be prima facie evidence in an action by the buyer against the seller for costs related to the continuing forest land obligation prior to sale.
