An erosion hazard area (EHA) has been identified on the Skykomish River bank along the east side of the proposal area. We used georeferenced aerial photos from 1938 and 2013 to calculate an annual average rate of erosion. Using the formula in Board Manual Section 2 for calculating EHA, the area eroded between 1938 and 2013 was divided by the adjacent bank length and the number of years between images. Our calculations yielded a 0.5 ft/yr average annual rate of erosion. Multiplying this rate of erosion by the 140 year time period determined to grow functional size wood gives an EHA of 70'. The EHA is a no-harvest area, and the appropriate RMZ for the Skykomish River has been applied on top of the EHA.

There is a no-cut leave area on a historic road departing from highway 2 and entering the property. This area is marked on the ground with pink flagging, and shown on the FP map. No ground disturbance activities will be conducted in this area. All trees near the historic road will be felled away from the area.

32. We acknowledge the following:

- The information on this application/notification is true.
- We understand this proposed forest practice is subject to:
 - The Forest Practices Act and Rules AND
 - All other federal, state or local regulations.
- Compliance with the Forest Practices Act and Rules does not ensure compliance with the Endangered Species Act or other federal, state or local laws.
- If we said that we would not convert the land to non-forestry use, the county or city may deny development permits on this parcel for the next 6 years.
- The following may result in an unauthorized incidental take of certain endangered or threatened fish species:
 - Conversion of land to non-forestry use.
 - Harvesting within the maximum RMZ on a 20-acre exempt parcel that was acquired after June 5, 2006.
 - Equipment Crossings/Fords in or over Type S and F Waters.
- Inadvertent Discovery – Chapters 27.44, 27.53, 68.50 and 68.60 RCW
 - If you find or suspect you have found an archaeological object or Native American cairn, grave, or glyptic record, immediately cease disturbance activity, protect the area and promptly contact the Department of Archaeology and Historic Preservation at 360 586-3077.
 - If you find or suspect you have found human skeletal remains, immediately cease disturbance activity, protect the area, and contact the County Coroner or Medical Examiner and local law enforcement as soon as possible. Failure to report human remains is a misdemeanor.

The landowner understands that by signing and submitting this FPA, he/she is authorizing the Department of Natural Resources to enter the property in order to review the proposal, inspect harvest operations, and monitor compliance for up to three years after its expiration date. RCW 76.09.150

Appendix E. CMZ Assessment Form

Section 9, Township 27, Range 09 E

Complete and attach this informational form to your FPA/N if you answered 'Yes' to FPA Question 11j. Refer to Forest Practices Board Manual Section 2—*Standard Methods for Identifying Bankfull Channel Features and Channel Migration Zones* for guidance on evaluating Channel Migration Zones (forms within Forest Practices Board Manual 2 are optional).

Applicant Office Review:

- Screening tools used: GIS Aerial Photo Years: 1938, 1990, 2003, 2009, 2012, 2013, 2017 LiDAR USGS Topographic Map
 Other (describe):
- Are you aware of channel movement or did you observe obvious channel movement between aerial photograph years?
 No, continue to question 3 Yes, continue to question 5
- Evaluate valley confinement using USGS topographic map(s) or aerial photographs.
 Valley floor is significantly wider than the channel. Channel migration may be occurring.
 Valley floor is very narrow, obviously less than twice as wide as the channel. If you can clearly see this circumstance on the aerial photographs, it is unlikely that channel migration is occurring.
- Did you observe any of the following on the aerial photographs?
 Side Channels Multiple Channels (Braiding)
 Large Gravel Bars Wood Jams
 Eroding Banks High Sinuosity or Sharp Channel Bends
 New Channels Occurring Between Photo Years (Avulsions)

 Avulsion hazard area Erosion hazard area (attach erosion rate calculations)
- What was the distance of channel walked? What was the length of CMZ boundary delineated?
1300' of EHA adjacent to the proposed harvest area has been delineated.

Briefly describe how you determined a CMZ exists, how you delineated the outer edge of the CMZ, and how you marked the outer edge of the CMZ on the ground (flagging color, paint, etc.):

An erosion hazard area (EHA) was identified on the Skykomish River bank along the east side of the proposal area using aerial imagery from 1938, 2003, 2009, 2012, 2013, and 2017. We used georeferenced aerial photos from 1938 and 2013 to calculate an annual average rate of erosion. Following the formula in Board Manual Section 2 for calculating EHA distances, the area eroded between 1938 and 2013 was divided by the adjacent bank length and the number of years between images. Our calculations yielded a 0.5 ft/yr average annual rate of erosion. Multiplying this rate of erosion by the 140 year time period determined to grow functional size wood gives an EHA width of 70'. The appropriate RMZ for the Skykomish River has been applied on top of the EHA.
