This map is a planning and preparation tool. Learn the evacuation routes for you and your family where you live, work, and play—evacuation maps may not be on hand during an actual emergency.

This evacuation walk time map for the City of Bellingham provides an estimate of the amount of time it would take to evacuate from within the inundated inundation zones of Cascadia. The inundation zone area is the extent defined as the 10-year wave zone from which tsunami inundation zones are defined. Time estimates are used to make evacuation decisions in the event of a tsunami and are intended to assist in planning. This map is not a evacuation plan but rather a tool that can be used in conjunction with the evacuation plan to provide a relative indication of time required.

- This map should be used in conjunction with other earthquake safety planning tools.
