This map is a planning and preparation tool. Learn the evacuation routes for you and your family where you live, work, and play—evacuation maps may not be on hand during an actual emergency.

This evacuation walk time map for Ilwaco and Cape Disappointment has been developed to estimate the amount of time it would take to evacuate from possibly inundation zones during a large earthquake. The map provides the evacuation routes for a typical emergency. It’s a tool. Take advantage of this map to plan your evacuation route to a designated assembly area.

- The walk time map is based on a worst-case scenario. It's a planning tool, not a determination of how long it would normally take to evacuate.
- Evacuation walk times are averages and may not include unexpected or unforeseen delays.
- In some places a slow walk may not be fast enough to evacuate before waves arrive. In these cases a faster pace may be necessary. Some areas may require vertical evacuation structures for successful evacuation.

Approximate tsunami evacuation not possible in model.

Estimated wave arrival times:
- Ilwaco: 15 minutes
- Cape Disappointment State Park: 20 minutes
- South Beach: 30 minutes
- North Head Trail: 45 minutes
- Discovery Trail: 60 minutes

Use situational awareness when evacuating and be prepared to take alternate paths if necessary.

Inundation may persist for many hours after the earthquake and modeled wave arrival at that location. Time estimates on this map are modeled assuming a slow walking pace of 2.46 mph.

Assembly areas are places of high ground for displaced people. These rally points are typically in open outdoor spaces or in large open parks far from the nearest inundation zones and far from roadways.

Estimated wave arrival times:
- Ilwaco: 15 minutes
- Cape Disappointment State Park: 20 minutes
- South Beach: 30 minutes
- North Head Trail: 45 minutes
- Discovery Trail: 60 minutes

In some places a slow walk may not be fast enough to evacuate before waves arrive. In these cases a faster pace may be necessary. Some areas may require vertical evacuation structures for successful evacuation.

Some areas may require vertical evacuation structures for successful evacuation.
