

## Forecast Fixes as of 03/04/2013

### V5.12.8.4 (Forecast Patch 13.1)

Vaccine Family/Vaccine Type	Fixed Bug Description
Influenza	For Patients <9 years of age with no prior history of influenza receiving 2 doses of influenza in the 2012 – 2013 flu season were being incorrectly forecasted for a 3 <sup>rd</sup> dose in the same season.
Tdap	Modified the past due age to 13 years of age from 13 years +1 month to be consistent with past due calculations for other vaccines with recommended age of 11 – 12 years of age.
Hepatitis A Ped/Adol	For Patients that received a Hep A Ped/Adol dose administered at 18+ yrs. of age was not being counted as a final dose when dose 1 was administered at < 18 years of age.
