

Vaccine Choices in CHILD Profile for H1N1 Influenza Vaccines

The easiest vaccine choices to use in the CHILD Profile system for H1N1 Influenza are “**Novel H1N1, All Formulations**” for any of the injectable products and “**Novel H1N1, Nasal**”, for the live attenuated vaccine administered nasally. These choices are set on the vaccine shortcut list that you see on the vaccination view/add screen.

Any DTT Batch or HL7 Submissions that send CPT code 90663 or CVX code 128 will be listed as “Novel H1N1, All Formulations” in CHILD Profile.

If you want to be more specific with the vaccine options and you are doing manual data entry, the choices in the table below can be found in the drop down vaccine list, under the word “**Novel**”. If you choose to use these more specific vaccine names, please follow the guidelines below. Be sure to communicate to all staff involved with entering lot numbers what decision has been made to match the lot numbers with the different vaccine options.

Preservative Free H1N1 vaccines, Injectable, Supplied by CDC, not VFC.

CHILD Profile Vaccine Name	Age	NDC Code	Formulation	CPT	CVX	Manufacturer Name - Code
