Explanation of Supporting Materials File List:

The following tables identify the supporting materials for the second public notice draft (AOP.2026.1D) of Renewal 4 of the Hanford Site Air Operating Permit (AOP).

In total, the application and other supporting materials comprise 331 files and 2.3 gigabytes of data. Ecology determined that this was too large for direct posting on our website. Instead, we are identifying the files which are available and providing Update Tracking/Summary Files to identify which supporting materials were used in the decision-making process for each update. The Update Tracking/Summary Files and this Supporting Materials File List will be directly available from Ecology's Public Involvement website with the AOP.2026.1D draft permit files. All other files listed below are available for viewing at Ecology's Richland Field Office and will be provided, in electronic form, upon request. Please see the AOP.2026.1D public notice for more information on viewing or requesting files.

This is the second public notice draft of Renewal 4 of the Hanford Site AOP. To better separate changes which came from public comments on the first public notice draft (AOP.2025.1D), all supporting materials for AOP.2025.1D are listed separtely from the additional supporting materials which were added for AOP.2026.1D. Files which are directly related to updates to Radioactive Air Emissions License (RAEL) FF-01, which is incoporated as AOP Attachment 2, are separated and designated for the Washington State Department of Health (Health). Other supporting materials are designed for Ecology.
