Change Control Logs ensure that changes to this unit are performed in a methodical, controlled, coordinated, and transparent manner. Each unit addendum will have its own change control log with a modification history table. The “Modification Number” represents Ecology’s method for tracking the different versions of the permit. This log will serve as an up to date record of modifications and version history of the unit.

E.1 INTRODUCTION

This addendum addresses security measures in effect at the Integrated Disposal Facility (IDF) dangerous waste management units (DWMUs) that comprise Operating Unit Group 11 of WA7890008967, Hanford Facility Resource Conservation and Recovery Act Permit of 1976. This security plan applies to all DWMUs defined in Addendum A, “Part A Form,” and is in effect through final closure.

E.2 SECURITY PROVISIONS

IDF, located within the 200 East Area of the Hanford Facility, complies with access control and warning sign requirements pursuant to Washington Administrative Code (WAC) 173-303-310(1) and (2), Dangerous Waste Regulations, Security. The active portions of the IDF include the following four DWMUs:

- Storage pad for container storage.
- Treatment pad for container storage and other treatment.
- Two disposal cells for landfill disposal.

Security measures are used to control access to the active portions of the Hanford Facility in accordance with Hanford Facility Permit Condition II.M, Security. The entire Hanford Facility is a controlled access area as described in Permit Attachment 3, Security. The security measures in Permit Attachment 3 and the unit-specific security measures in this addendum prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock. [WAC 173-303-310(1)]

E.2.1 Access Control

Unknowing entry and the possibility for unauthorized entry of persons or livestock onto the active DWMUs of IDF are minimized through implementation and maintenance of the following security measures.

- Authorization clearance for all entrants to the IDF is required. Clearance to enter is ultimately confirmed by facility personnel.
- Roadway access is controlled by a perimeter fence (nominally 1.8 m [6 ft] high chain link) surrounding the IDF boundary and locked swinging metal gates at the IDF entrances. During non-operational hours and periods of nonactivity or layup, the gates will remain locked. The gate keys are controlled and may only be accessed by authorized personnel.

Visitors to IDF must adhere to all personal protection requirements and are subject to escorting protocols. Personnel training requirements for IDF operators and workers are found in Addendum G, “Personnel Training.”

E.2.2 Warning Signs

Warning signs stating “Danger-Unauthorized Personnel Keep Out” are posted at each gate entrance to the IDF. Signs identical to those affixed at IDF gate entrances are posted along the fence lines at distances not to exceed 76.2 m (250 ft) between signs. Figure E-1 identifies the minimum number of signs posted along each segment of fence. Permittees must maintain warning signs and ensure that signs are written in English, legible from a distance of approximately 7.6 m (25 ft) or more, and visible from all angles of approach [WAC 173-303-310(2)(a)].
