SECTION 1 - SHORELINE MASTER PROGRAM INTRODUCTION

1.1 Intro/Background Info

Pursuant to the Revised Code of Washington (RCW) 90.58 (i.e. the Shoreline Management Act (SMA) of 1971), and WAC 173-26-010, the Town is updating its Shoreline Master Program (SMP). In 2012, the town began the process of updating their SMP. The update must be completed by June 30, 2014 to meet Ecology's schedule.

The Washington State SMA requires jurisdictions that contain "Shorelines of the State" within their boundaries to periodically update their SMP as required with the regulatory agency, namely the Washington State Department of Ecology (Ecology). The SMA was originally established by the Washington State Legislature in 1971. The passage of the SMA provided a state and local partnership that outlines minimum guidance standards for adoption by local governments for shoreline use. Additionally, it requires local governments to develop and administer SMPs to regulate shoreline development. The SMA applies to marine waters, lakes greater than 20 acres, and rivers and streams with average flows greater than 20 cubic feet per second (cfs). The SMA covers land 200 feet from the ordinary high water mark (OHWM) of these waters and beyond if associated wetlands extend outward of the 200 foot buffer.

The three areas of focus of the SMP update are: 1) accommodate reasonable and protective uses of the shoreline; 2) protect shoreline environmental resources; and 3) protect the public's right to access and use the shorelines (RCW 90.58.020). These protections are designed to meet the overarching policy of the SMA, which is to ensure that, "the public's opportunity to enjoy the physical and aesthetic qualities of natural Shorelines of the State shall be preserved to the greatest extent feasible consistent with the overall best interest of the state and the people generally (RCW 90.58.020)."

The purpose of this SMP Update is to be consistent with the SMA and corresponding guidelines; coordinate with the State Growth Management Act; protect, restore and enhance the Town's environmental resources; offer public access and enjoyment of shorelines; and promote the public health, safety, and general welfare by providing guidelines and regulations for the future development of the Town's shoreline.

This SMP Update provides goals, policies and regulations for the development of shorelines within the jurisdiction of the town and acts as a regulatory tool for shoreline development. This SMP Update incorporates the Shoreline Inventory/Characterization Assessment Report (2012) and the Shoreline Restoration Plan (June, 2013).

1.2 Overview of Process

The SMA and the SMP guidelines identify specific components that need to be included in the SMP Update. The following is a summary of each component.

Community Vision – This component identifies the community’s long range vision of their shorelines. This vision suggests how the overall community SMP policies, regulations, and environment designations are established.

Goals & Policies – The implementation of the community vision begins with the development of goals and policies. The SMA and SMP guidelines require the community to develop goals, policies and regulations for the shoreline jurisdiction, without regard to environmental designations. Some of these categories include: archaeological and historic resources, critical areas, flood hazard areas, public access, shoreline vegetation conservation, water quality, storm water and non-point pollution. The goals provide a foundation for policies, which shall shape the regulations that can be specific to environment designations, shoreline uses, and/or shoreline modifications.

Environmental Designations – Environmental designations classify shoreline areas based on local shoreline conditions including; ecological functions, land use patterns, community goals, and shoreline management recommendations made in the inventory and characterization reports. The environment designations are similar to land use designations in the local comprehensive plan.

Environmental designations provide “the framework for implementing shoreline policies and regulatory measures specific to the environment designation” [WAC 173-26-191(1)(d)]. Each environmental designation must have a purpose statement, designation criteria, and management policies and regulations specific to each environment. Environmental designation regulations establish specific uses such as residential or industrial for these shoreline areas [WAC 173-26-211]. Through this SMP Update, the environmental designations are mapped in a similar way as a zoning map.

Regulations – Regulations identify specific rules that apply to shoreline development. The SMP distinguishes development between uses (e.g. residential, agriculture or commercial) and modifications (e.g. shoreline stabilization or dredging). The regulations apply requirements for the permitting of uses and modifications within each environmental designation. Management policies will be projected through regulations and include elements pertaining to: permitted, conditional and prohibited uses; setbacks and buffers; height and lot coverage; density limits; vegetation conservation; signage; and public access.

Administrative Provisions – This component defines the policies and regulations that cover how the SMP will be administered and enforced. The Administrative Provisions define the triggers and processes that are administered through the SMP.

Appendices – The appendices include the complete Shoreline Inventory / Characterization Report, Community Visioning Report, Cumulative Impact Analysis.

This SMP Update was developed around the community visioning that took place at the beginning of the update process. This set the framework for the development of the goals, policies and regulations that are required to manage, protect and improve the shoreline of Hangman Creek. The issues and priorities

the community members identified during the visioning process, influenced the establishment of specific goals and policies that the community can support as the Town implements the SMP Update. It offers a platform for reinforcing the positive aspects of the Town while striving to overcome barriers to success, balancing the need to encourage growth and investment with the need to foster a quality living environment.

Each of the following elements present a summary of related existing conditions, the planning objectives the section strives to achieve, and a set of goals, policies and programs for the Town to pursue. For purposes of this plan, these key concepts are defined as:

Goals are the broadest expression of community desires consistent with the Shoreline Management Act (SMA). These statements provide value in the goal-setting process because it focuses the community on mutually desired outcomes before beginning the potentially more divisive process of deciding how to best achieve those outcomes. A goal is a direction setter. It is an ideal future end, condition, or state related to the public health, safety, or general welfare toward which planning and implementation measures are directed. Consequently, a goal is generally not quantifiable, time dependent, or suggestive of specific actions for its achievement.

A **policy** is a commitment to act in a prescribed manner in the administration of the master program. Policy statements identify guidelines to establish a definite course to guide present and future decisions. A policy is a specific statement that guides decision-making. It indicates a clear commitment of the local legislative body. A policy is based on the SMP's goals. A policy guides the development of ordinances and regulations.

A **regulation** is an authoritative rule dealing with the specifics of a use or physical standard. Regulations are specific implementation measures driven from specific policies. All future development shall conform to the regulations.

An **action** is the outcome or product of a project, which could involve some sort of public infrastructure (e.g. a new bridge or stormwater facility) or private development (e.g. a new restaurant).

Figure 1 on Page 5 illustrates a planning schematic of how these elements are inter-related and how each of these elements build upon each other. This figure depicts the structural format, and also paints an abstract picture as to how this SMP Update flows.

1.3 Using of this document

This SMP Update develops both a policy and regulatory document per the SMA. The process is similar for other planning documents such as the comprehensive plan (policy) and zoning code (regulatory).

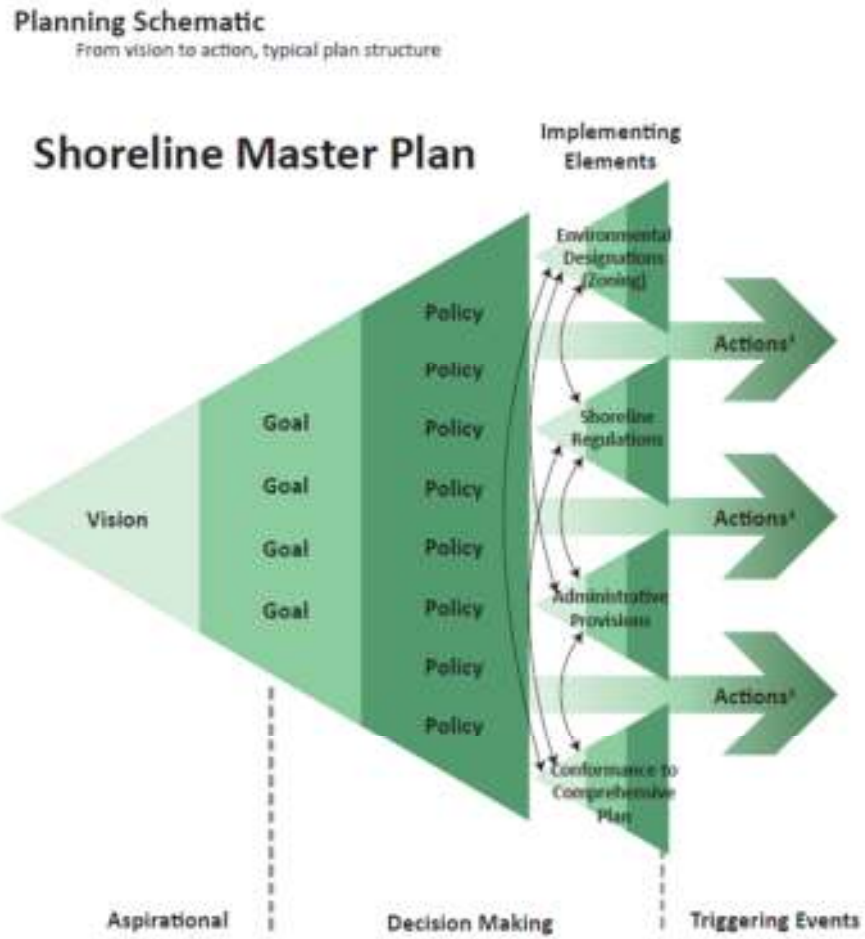

In using this document, it is important to understand that the intended role is to yield:

- a. A vision of the shoreline.
- b. An internal guide providing Town staff with set goals and policies.
- c. A guide for elected and appointed leaders providing direction on decision making and establishing regulations.
- d. An outline of key issues and Town characteristics.

The overall intent of this plan is to provide a comprehensive and coordinated step towards a variety of community goals as they relate to the shoreline. However, further actions will be needed to implement this plan including:

- a. Further study – in some cases the Town will need to conduct relatively simple inventories or studies; in other cases, the creation of more topic-specific or sub-area plans will be necessary.
- b. Consistency – the Town’s set of development and zoning regulations will need to be updated and/or revised to implement the plan. Other, department specific plans may also require review.
- c. Use and updates – Town leaders and staff will need to internalize and use the plan, marking progress, considering revisions, and updating the plan regularly on-pace with conditions.
- d. Public involvement – residents will need to remain active in helping achieve goals and in monitoring the plan’s progress over time.

Figure 1 – Planning Schematic

¹Examples of Actions include: implementing capital investments or private developments.

Figure 1.0 - This image illustrates the basic structure of this Shoreline Master Plan Update, including the relationship between broad-brush ideals (vision) leading to more specific action items including policies and implementing elements.

Source: J-U-B ENGINEERS, Inc. - Note: Planning schematic modeled after a similar schematic viewed from the City of Cheney (Washington) Comprehensive Plan (dated 2010), prepared by Studio Cascade, Inc.)

SECTION 2 – ENVIRONMENTAL DESIGNATIONS

As described in WAC 173-26-191 (1)(d), shoreline master programs shall contain a system to classify shoreline areas into specific environmental designations. Shoreline Environmental Designations (SED) are analogous to zoning designations for areas within the shoreline jurisdiction. SEDs provide a uniform basis for applying policies and use regulations within each designation if allowed by underlying zoning requirements. SEDs are intended to encourage appropriate uses and activities while providing for protection and restoration of shoreline ecological functions.

SEDs are based on existing and proposed land use patterns, the biological and physical character of the shoreline as described in the Shoreline Inventory and Characterization Summary Report, URS, November 2012, and the goals and aspirations of the community expressed through the local comprehensive plan. The shoreline designations are illustrated on the Shorelines Designations Map which is an integral part of the Shoreline Master Program, and is available for public viewing at Town Hall.¹ Characteristics and general management policies for each of the designations are given in Section 3.0.

It is anticipated that reasonable standards, restrictions, and prohibitions on shoreline developments will be instituted as shoreline regulations. This is necessary so that shoreline development will reasonably protect existing uses and shoreline character so that the statewide goal for “No Net Loss” of shoreline ecological functions is achieved.

2.1 Environmental Designation Provisions (WAC 126-211(5))

The information provided for each SED generally follows the state classification guidelines (WAC 173-26-211 (4) and (5)). The state guidelines provide a recommended classification system. Local governments may establish a different designation system or may retain their current environment designations (WAC 173-26-211(5), 211(4)(c)(i)).

The new SEDs that reflect the findings of the 2010 shoreline inventory and of current shoreline uses as well as to allow for management of the shorelines under the new state guidelines. The proposed SED categories are Aquatic (AQ), Urban Conservancy (UC), and Mixed Use (MU). These SEDs closely reflect the state standards but minor revisions to the state standard designation criteria and management policies have been incorporated.

The AQ designation is intended for work within and over the water. The UC designation provides emphasis on public access, vegetation conservation and restoration. The MU designation recognizes the importance of commercial areas to the community.

¹ In the event of a mapping error, the jurisdiction will rely upon common boundary descriptions and the criteria contained in RCW 90.58.030(2) and Chapter 173-22 WAC pertaining to determinations of shorelands, as amended, rather than the incorrect or outdated map.

2.2 Aquatic Environment

2.2.1 Purpose

The purpose of the “aquatic” environment is to protect, restore, and manage the unique characteristics and resources of the areas waterward of the ordinary high water mark.

2.2.2 Designation Criteria

Assign an "aquatic" environment designation to lands waterward of the ordinary high-water mark.

2.2.3 Management Policies

1. Allow new over-water structures only for water-dependent uses, public access, or ecological restoration.
2. The size of new over-water structures should be limited to the minimum necessary to support the structure's intended use.
3. All developments and uses should be located and designed to minimize interference with surface navigation, to consider impacts to public views, and to allow for the safe, unobstructed passage of fish and wildlife.
4. Shoreline uses and modifications should be designed and managed to prevent degradation of water quality and alteration of natural hydrographic conditions.
5. Allow for maintenance and expansion of existing flood control facilities needed to protect the community. Maintenance activities include dredging and levee maintenance.
6. Allow consideration of in-stream modifications to retain water for habitat, recreation, and aesthetics.
7. Permitting for activities and structures within the aquatic environment shall comply with all state and federal laws, including coordination with applicable agencies.

2.3 Urban Conservancy Environment

2.3.1 Purpose

The purpose of the "urban conservancy" environment is to protect and restore ecological functions of open space, floodplain and other sensitive lands where they exist in urban and developed settings, while allowing a variety of compatible uses.

2.3.2 Designation Criteria

Assign an "urban conservancy" environment designation to shoreline areas appropriate and planned for development that is compatible with maintaining or restoring of the ecological functions of the area, that are not generally suitable for water-dependent uses and that lie in incorporated municipalities, urban

growth areas, or commercial or industrial "rural areas of more intense development" if any of the following characteristics apply:

- a. They are suitable for water-related or water-enjoyment uses.
- b. They are open space, flood plain or other sensitive areas that should not be more intensively developed.
- c. They have potential for ecological restoration.
- d. They retain important ecological functions, even though partially developed; or
- e. They have the potential for development that is compatible with ecological restoration.

2.3.3 Management Policies

1. Uses that preserve the natural character of the area or promote preservation of open space, floodplain or sensitive lands either directly or over the long term should be the primary allowed uses. Uses that result in restoration of ecological functions should be allowed if the use is otherwise compatible with the purpose of the environment and the setting.
2. Allow continuation of existing low intensity agricultural uses.
3. Standards should be established for shoreline stabilization measures, vegetation conservation, water quality, and shoreline modifications within the "urban conservancy" designation. These standards shall ensure that new development does not result in a net loss of shoreline ecological functions or further degrade other shoreline values.
4. Public access and public recreation objectives should be implemented whenever feasible and significant ecological impacts can be mitigated.
5. Water-oriented uses should be given priority over non-water oriented uses.

2.4 Shoreline Mixed Use Environment

2.4.1 Purpose

The purpose of the "shoreline mixed use" environment is to accommodate mixed use development including residential, commercial, institutional, utility and industrial development that is consistent with the shoreline management act, creates a unique urban waterfront environment, enhances aesthetic appeal, provides public access, and allows compatible uses.

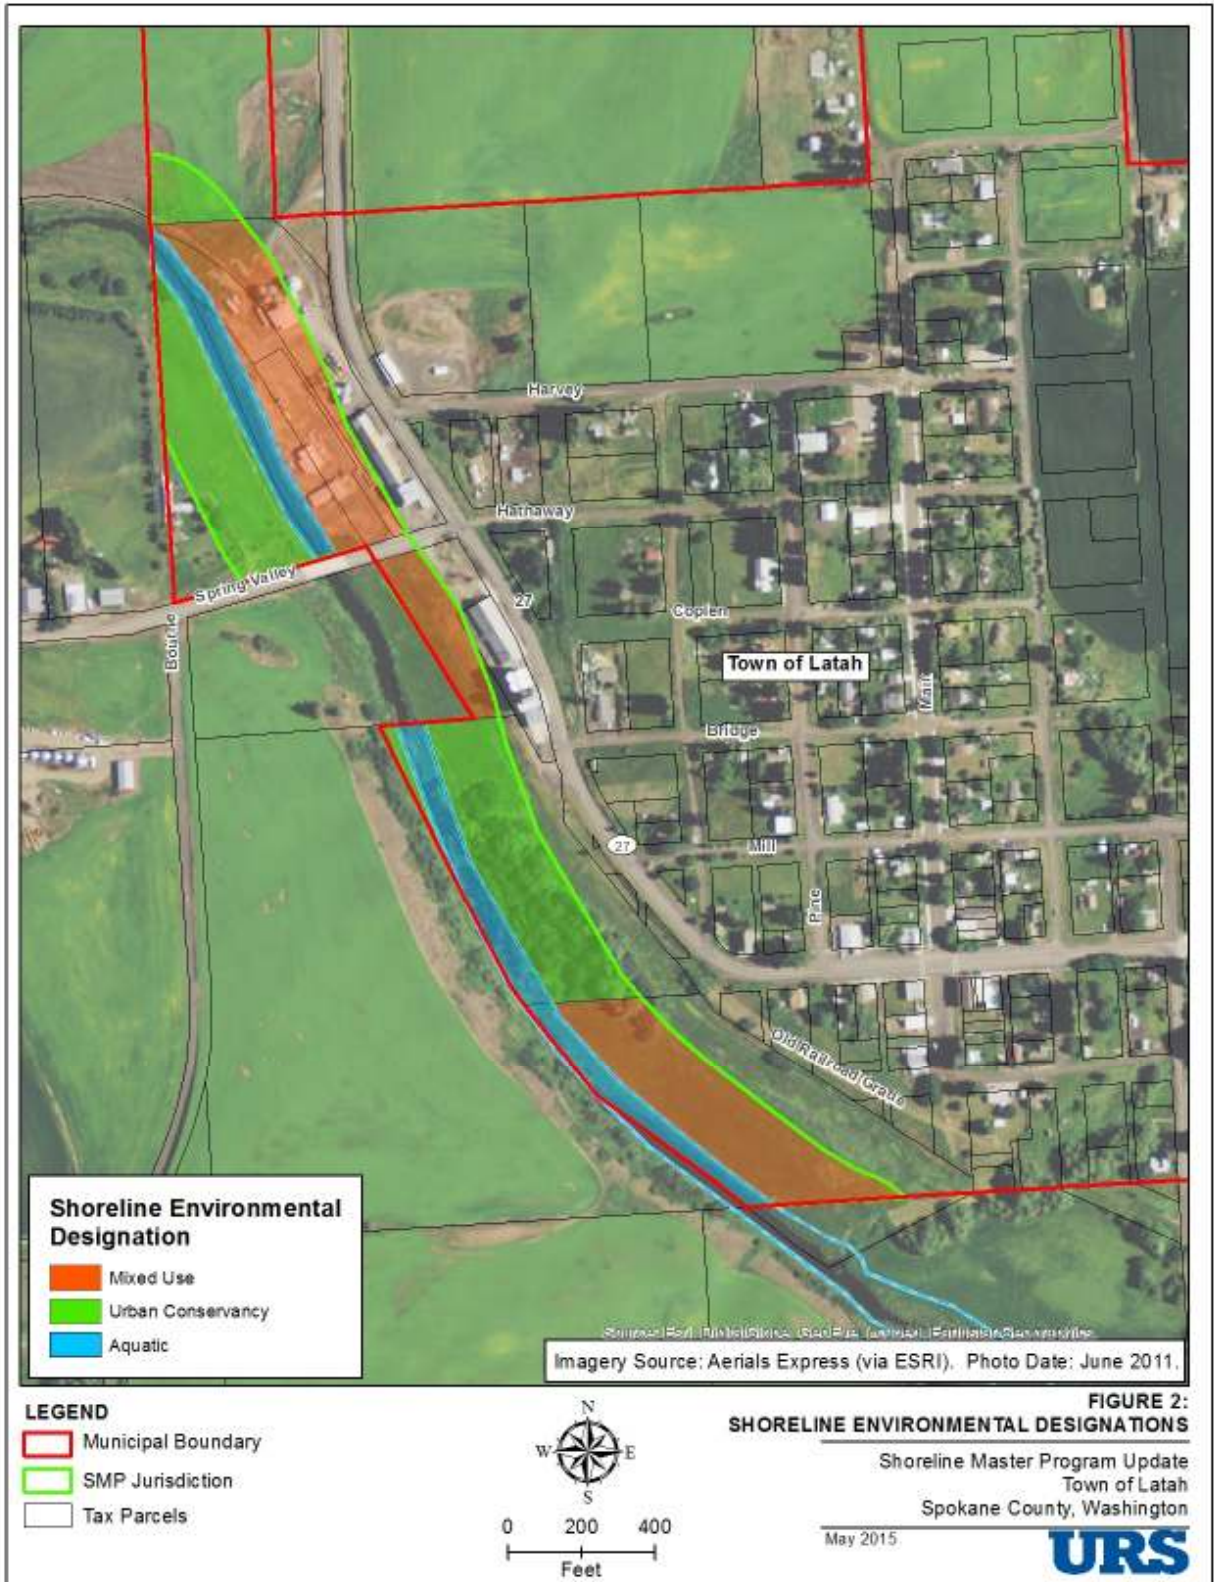

2.4.2 Designation Criteria

Assign a "shoreline mixed use" environment designation to shoreline areas that are predominately non-residential in nature. Areas that are predominately non-residential commercial but not developed, or have been developed in the past but are not currently in productive use should be considered for this designation. Established parcels containing ongoing or anticipated commercial developments as identified during the Visioning Process should be afforded this environmental designation.

2.4.3 Management Policies

1. Standards should be established for shoreline stabilization measures, vegetation conservation, water quality, and shoreline modifications within the "shoreline mixed use" designation. These standards shall ensure that new development does not result in a net loss of shoreline ecological functions or further degrade other shoreline values.
2. Public access and public recreation objectives should be implemented whenever feasible and significant ecological impacts can be mitigated.
3. Water-oriented uses should be given priority over non-water oriented uses. For shoreline areas adjacent to commercially navigable waters, water-dependent uses should be given highest priority.
4. Policies and regulations shall assure no net loss of shoreline ecological functions as a result of new development. Where applicable, new development shall include restoration of the shoreline to comply with any relevant state and federal law.
5. Where feasible, visual and physical public access should be required as provided for in WAC 173-26-221(4)(d).
6. Aesthetic objectives should be implemented by means such as sign control regulations, appropriate development siting, screening and architectural standards, and maintenance of natural vegetative buffers.
7. Access, utilities, and public services should be available and adequate to serve existing needs and/or planned future development.

Figure 2 - Shoreline Environmental Designations Exhibit

SECTION 3 – GOALS AND POLICIES

3.1 Introduction

This Chapter of the Shoreline Master Program provides the goals and policies that guide the SMP regulations.

3.2 General Goals and Policies

Goal SMP 1: Enhance and maintain the Town’s shorelines by establishing and implementing goals, policies, and regulations that promote a mixture of reasonable and appropriate shoreline uses that improve the Town’s character, foster its historic and cultural identity, provide for economic development, provide flood protection, and conserve environmental resources.

Policies

SMP 1.1 Coordinated Planning

Coordinate shoreline planning between the Town, agencies with jurisdiction, adjoining jurisdictions, the State of Washington, and the State of Idaho into which the river basin extends, and consider the plans of non-government organizations (NGO’s) and/or special interest groups.

SMP 1.2 Consistency with Other Plans and Programs

Ensure that the Town’s Shoreline Master Program is consistent with the Washington State Shoreline Management Act and Growth Management Act, the basic concepts, goals, policies, and land use plan of the Town’s Comprehensive Plan and development regulations, the Town’s Critical Areas Ordinances, and the Shoreline Master Programs of adjacent jurisdictions.

SMP 1.3 No Net Loss of Ecological Functions

Ensure that shoreline use and development is regulated in a manner that guarantees no net loss of shoreline ecological functions.

SMP 1.4 Public Interest and Property Rights

Protect the interests of the public in attaining the goals of the Shoreline Master Program in a manner consistent with all relevant constitutional and other legal limitations on the regulation of private property.

SMP 1.5 Shoreline Designated Environments

Designate shoreline environments for the Town’s shorelines that are consistent with the Comprehensive Plan land uses, existing land uses and zoning, shoreline management practices, and shoreline inventory.

SMP 1.6 Use preferences for all Shorelines

Give preference to those shoreline activities which fulfill long range Comprehensive Plan goals and the Shoreline Management Act policy priorities, as listed and discussed in RCW 90.58.020.

SMP 1.7 Flood Control

Provide provisions to allow maintenance of floodways to reduce flooding risk to downtown Latah.

SMP 1.8 Economic Development

Provide provisions to utilize Hangman Creek and associated shorelines for economic development while maintaining and enhancing shoreline ecological function.

3.3 Economic Development

Goal SMP 2: Encourage and support water dependent, water oriented, and water related economic activities within the shoreline jurisdiction of the Town that will be an asset to the economy of the area, will reduce flooding to downtown, and that will protect, maintain and enhance the ecological functions of the shoreline environment.

Policies

SMP 2.1 Location and Design for Economic Development

Give preference to economic development within the shoreline jurisdiction that is particularly dependent on location or use of the shoreline.

Development should be designed to minimize the impacts to the shoreline aesthetic through architectural, landscape, and other design features. Encourage design that seeks to restore damaged or compromised shoreline and provides flood protection for the Town. Design and locate commercial developments in a manner so that surface waters, wetlands, steep slopes, and erodible soils are duly considered, and so that new developments comply with storm water management criteria and applicable Critical Areas Ordinance regulations (*see Latah Comprehensive Plan*).

SMP 2.2 Provisions for Physical and Visual Availability to Water

Historic sites, overlook points, structures, and points of public access to the waterfront should be incorporated in economic development site-planning.

SMP 2.3 Encourage Regional Tourism

Strengthen regional tourism by expanding and developing commercial, neighborhood and regional linkages and improvements that use the shoreline areas.

SMP 2.4 Promote Recreational Uses

Promote recreational uses of the shorelines to contribute to the economic attractiveness of the Town. Seek opportunities to identify and partner with public and private property owners to establish public recreational opportunities in the shoreline including pathways, parks, viewpoints, and beaches.

SMP 2.5 Provisions for Shoreline Protection

Require that development provide provisions for the protection of water quality, erosion control, native vegetation, aesthetic characteristics, fish and wildlife habitat, views, archaeological sites, public use, and flood protection.

3.4 Public Access Element

Goal SMP 3: Provide reasonable and adequate public access to the Shorelines of the State consistent with the natural shoreline character, private property rights, public rights under the Public Trust Doctrine, and public safety.

Policies

SMP 3.1 Shoreline Development by Public Entities

Require public entities, including local governments, state agencies and public utility districts, to include public access as part of each development project unless such access is incompatible due to reasons of safety, security or impact to the shoreline environment.

SMP 3.2 Shoreline Development by Private Entities

Require the dedication and improvement of public access in new developments for water-enjoyment, water-related and non-water-dependent uses and for the subdivision of land into more than four parcels, with exceptions as allowed by WAC 173-26-221(4)(d)(iii).

SMP 3.3 Design of Access Measures

Require that public access measures have a design appropriate to the site, adjacent property, and general nature of the proposed development, while protecting and providing views. Public access facilities should be designed with provisions for persons with disabilities, where appropriate. Access design and spacing of access points should be based on the biophysical capabilities of the shoreline features and should protect fragile shoreline environments.

3.5 Recreation Element

Goal SMP 4: Preserve and increase recreational opportunities on the Town's shorelines.

Policies

SMP 4.1 Promote and Preserve Shorelines for Public Recreational Use

Encourage development of recreation opportunities along the shorelines, particularly on publicly owned properties. Encourage private commercial development to incorporate a recreational element in the design if appropriate.

SMP 4.2 Recreational Areas Protect Shoreline Ecological Functions

Recreational areas should be located, designed, developed, managed and maintained in a manner that protects shoreline ecological functions and processes and results in no net loss of ecological functions.

SMP 4.3 Linkages to Recreation Areas

Hiking paths, bicycle paths, easements and scenic drives should link shoreline parks, recreation areas and public access points.

SMP 4.4 Adequate Support Facilities

Create adequate support facilities such as parking areas, maintenance buildings, and rest rooms to meet shoreline recreational demands.

SMP 4.5 Non-Motorized Recreation

Preference shall be given to non-motorized recreational activities.

3.6 Circulation Element

Goal SMP 5: Provide a safe, convenient, and multimodal circulation system which will provide for vehicular traffic needs and vehicular and pedestrian access, but minimize disruption to the shoreline environment.

Policies

SMP 5.1 Transportation Access

Ensure that a system of roads and pathways adjacent to and within the shoreline jurisdiction provide appropriate access to Hangman Creek in a way that meets the needs and desires of the community as reflected in the Latah Growth Management Act Implementation Program, and planning goals of the Growth Management Act, RCW 36.70A.020; while also preserving ecological function of the shorelines.

SMP 5.2 Location of New Streets or Street Expansions

Locate new streets or street expansions outside of the shoreline jurisdiction, unless no other options are available or feasible. In all cases, streets should be on the landward side of development if feasible.

SMP 5.3 Consolidation of Road and Utility Corridors

Encourage the consolidation of transportation and utility corridors crossing the shoreline environment in order to minimize the number of crossings, and encourage the collocation of utilities on bridges or in transportation rights-of-way whenever possible by considering this need during the design of bridge and corridor upgrades.

SMP 5.4 Parking Facilities not a Primary Use.

Parking facilities should only be allowed as necessary to support permitted shoreline uses, and not as a primary use, and must be located outside of the shoreline jurisdiction area if other options are available and feasible. Minimize the environmental and visual impacts of parking facilities where allowed.

SMP 5.5 Retain Unused Public Rights-of-way for Visual and Physical Access

Retain unused public rights-of-way within the shoreline area to provide visual and physical access to the shoreline, and of rights-of-way for public access which are not in use and would be impractical or illogical to develop (see *the Latah Growth Management Act Implementation Program, Part II*).

3.7 Shoreline Use Element

Goal SMP 6: Consider the use and development of shorelines and adjacent land areas for housing, business, industry, transportation, recreation, education, public buildings and grounds, utilities and other categories of public and private land uses in relation to the natural environment.

Policies

General Use

SMP 6.1 Shoreline Use Priorities

Give preference to water-orientated and single family residential uses that are consistent with preservation of shoreline ecological functions and processes and flood protection

SMP 6.2 Protect Shoreline Ecological Functions

Ensure no net loss of ecological functions through the use of specific standards for setbacks, buffers, density, and shoreline stabilization.

SMP 6.3 Preserving Fish and Wildlife Habitat

Encourage new development to contribute to the creation or preservation of open space and/or fish and wildlife habitat along the shorelines.

SMP 6.4 Nonconforming Use and Development

Legally established uses and developments that were erected and maintained in lawful condition prior to the effective date of this Master Program, shall be allowed to continue as legal nonconforming uses provided that future development or redevelopment does not increase the degree of nonconformity with this program.

Residential Use

SMP 6.5 Public Access in Development

Ensure that shoreline development includes promotes and preserves visual and physical public access to the shorelines, while avoiding, minimizing, or mitigating negative impacts to the shoreline including views.

SMP 6.6 Subdivided Lots

Require new subdivided lots to be designed, configured, and developed to:

- Prevent the net loss of ecological functions at full build-out;
- Prevent the need for new shoreline stabilization or flood hazard reduction measures;
- Be consistent with applicable environmental designations and standards; and,
- Prohibit over-water residences.

Commercial Use

SMP 6.7 Priorities for Commercial Use

Give preference to new commercial uses in the following order:

1. First priority is given to water-dependent commercial uses.
2. Second priority is given to water-related and water-enjoyment commercial uses.

SMP 6.8 Water Dependent and Water Related Commercial Uses

Water dependent and water related commercial uses within the shoreline jurisdiction should be discouraged in areas that are susceptible to erosion and flooding and where there are impacts to ecological functions unless appropriate flood control measures can be implemented.

SMP 6.9 Agricultural Uses

Ongoing agricultural uses are exempt from this SMP. Agricultural activities include the cultivation of the soil, production of crops, and/or raising of livestock, including incidental preparation of these products for human use. (Agricultural activities are commercial uses; and specific agricultural meanings are provided in WAC 173-26-020).

Industrial Uses

SMP 6.10 Priorities for Industrial Use

Give priority to industrial uses in the following order:

1. First priority is given to water-dependent industrial uses.
2. Second priority is given to water-related industrial uses.

SMP 6.11 Water Dependent and Water Related Industrial Uses

Water dependent and water related industrial uses within the shoreline jurisdiction should be discouraged in areas that are susceptible to erosion and flooding and where there are impacts to ecological functions unless appropriate flood control measures can be implemented.

Shoreline Modifications

SMP 6.12 Shoreline Modifications

Allow structural shoreline modifications only where they are:

- Demonstrated to be necessary to support or protect an allowed primary structure, or a legally existing shoreline use that is in danger of loss or substantial damage; and,
- Necessary for reconfiguration of the shoreline for mitigation or enhancement purposes.

SMP 6.13 Modification Impacts and Limitations

Reduce the adverse effects of allowed shoreline modifications and, as much as possible, limit allowed shoreline modifications in number and extent. Base shoreline modification regulations on scientific and technical information of reach conditions for Hangman Creek.

SMP 6.14 Appropriate Modifications

Allow only shoreline modifications that are appropriate to the shoreline environment designations and environmental conditions for which they are proposed.

SMP 6.15 Modifications and No Net Loss of Ecological Functions

Assure that shoreline modifications individually and cumulatively do not result in a net loss of ecological functions by:

1. Giving preference to those types of shoreline modifications that have the least impact on ecological function; and,
2. Requiring mitigation of identified impacts resulting from shoreline modifications.

Piers and Docks**SMP 6.16 Dock Restrictions**

Allow new docks only for single-family residences and public access on Hangman Creek. For new residential development of more than two dwellings a joint use or community use dock will be allowed, rather than individual docks.

SMP 6.17 Design and Construction

Piers and docks shall be permitted only when a specific need is demonstrated, shall be the minimum size necessary to serve that need, and shall be designed and constructed to avoid, minimize and mitigate impacts to shoreline ecological processes and functions.

Shoreline Fill**SMP 6.18 Design and Location**

Shoreline fills shall be designed, located and constructed to protect shoreline ecological function and ecosystem-wide processes, including channel migration, wildlife habitat, water quality, water currents, and surface water drainage. Shoreline fills necessary for economic development of commercially zoned areas shall require a conditional use permit and shall be required to mitigate environmental impacts to the shoreline, provide and mitigate for flood protection, both upstream and downstream of the development and shall provide public access.

SMP 6.19 Limitations on Fill

Fill waterward of the Ordinary High Water Level shall require a conditional use permit and shall only be allowed under limited circumstances, including expansion or alteration of transportation facilities, flood protection for the Town, and environmental restoration.

Shoreline Stabilization**SMP 6.20 Integrated Approach to Shoreline Stabilization**

Select and design streambank stabilization measures using an integrated approach requiring an analysis of the reason for the erosion; fish and wildlife habitat characteristics, needs and potential; and the current and future risks associated with erosion and bank protection to property, infrastructure, fish and wildlife habitat and public safety.

SMP 6.21 Shoreline Stabilization Protection Measures

Prohibit new streambank protection measures except when necessity is documented through an integrated approach analysis of the site and shoreline characteristics.

SMP 6.22 Design and Location of New Development

Locate and design new development and lots created through subdivision, particularly those located on steep slopes and bluffs, to prevent the need for future streambank stabilization measures during the life of the structure(s).

SMP 6.23 Public Access

Incorporate ecological restoration and public access as part of publicly funded streambank protection projects.

SMP 6.24 Soft Structure Stabilization Measures

Encourage the use of soft structure stabilization measures in the construction of erosion controls, and to preserve stream function.

Dredging**SMP 6.25 New Dredging**

Dredging and dredge disposal shall avoid or minimize shoreline ecological impacts. Site and design new development to avoid the need for new and maintenance dredging. Dredging for fill materials prohibited except for habitat restoration approved by a Conditional Use Permit.

SMP 6.26 Maintenance Dredging

Maintenance dredging for flood control shall be allowed but restricted to areas that have been previously maintained.

SMP 6.27 Disposal of Dredging Materials

Disposal of dredged materials within the shorelines and the channel migration zone is discouraged. In limited circumstances disposal in these areas may be allowed by a Conditional Use Permit.

In-stream Structures**SMP 6.28 In-Stream Structures**

Site in-stream structures to protect and preserve ecosystem-wide processes, ecological functions, and cultural resources, including but not limited to fish and fish passage, wildlife and water resources, shoreline critical areas, hydro-geological processes, and natural scenic vistas.

SMP 6.29 In-Stream Structure Location

Consider the full range of public interests, watershed functions and processes, and environmental concerns when planning and locating in-stream structures, with special emphasis on protecting and restoring priority habitats and species.

Habitat and Natural Systems Enhancement Projects

SMP-6.30 Habitat and Natural Systems Enhancement Projects

Advocate and foster habitat and natural system enhancement projects which restore the natural character and function of the shoreline provided they are consistent with the Restoration Plan.

3.8 Conservation

Goal SMP 7: Preserve for the future those natural resources, including the unique, fragile and scenic qualities of the shoreline, which cannot be replaced. Achieve no net loss of ecological functions of the shoreline.

Policies:

SMP 7.1 Areas to be Preserved

Areas that provide open spaces, scenic vistas, contribute to shoreline aesthetics, natural vegetation and, fish and wildlife habitat should be preserved.

SMP 7.2 Protect Vegetative Buffers and Setbacks

Protect existing vegetation and shoreline ecological function by designating buffers and setbacks that are supported by the 2012 Shoreline Inventory and Characterization Report.

SMP 7.3 Vegetation Management

1. Native vegetation shall be protected.
2. Remove and manage non-native and noxious plants.
3. Selective pruning of trees for safety and view protection is allowed.
4. Provide standards for chemical control of noxious and non-native vegetation.
5. Allow limited use of goat/sheep in shoreline jurisdiction to manage non-native and noxious plants.

3.9 Historical, Cultural, Scientific & Educational Element

Goal SMP 8: Protect the historic, cultural, scientific or educational sites within the shoreline that reflect our community's unique heritage and create or contribute to the collective sense of place.

Policies

SMP 8.1 Sites and Structures

Identify, preserve, and manage shoreline sites and structures having historical, cultural, scientific or educational value, and develop regulations that avoid, minimize, or mitigate any adverse impacts to these resources.

SMP 8.2 Development Impacts

Encourage public or private development and redevelopment activities on any site, area, or building identified as having historical, cultural, educational or scientific value to maintain the inherent historical, cultural, educational or scientific value.

SMP 8.3 Cooperation and Consultation

Ensure constant cooperation and consultation with affected agencies and tribes for projects that could potentially impact cultural and historical resources.

SMP 8.4 Inventory of Sites

Work with tribal, state, federal and local governments as appropriate to maintain an inventory of all known significant local historic, cultural, and archaeological sites in observance of applicable state and federal laws protecting such information from public disclosure.

SMP 8.5 Site Inspection and Evaluation

Ensure early and continuous site inspection, consultation or evaluation by a professional archaeologist in coordination with affected tribes for all permits issued in areas documented to contain archaeological resources.

3.10 Flood Hazard Reduction Element

Goal SMP 9: Prevent and reduce flood damage to public and private property, infrastructure, and promote economic development.

Policies

SMP 9.1 Development within the Shoreline

Prohibit development within the shorelines that would intensify flood hazards or result in cumulative significant adverse effects to other properties, as regulated by the *Latah Critical Areas Ordinance*, Section 7.0 – *Frequently Flooded Areas* (adopted September 16, 1997).

SMP 9.2 Coordination among agencies

Coordinate flood hazard reduction planning among the applicable agencies (e.g. Spokane County, Department of Ecology, Department of Fish and Wildlife and the U.S. Corps of Engineers).

SMP 9.3 Alteration of Watercourses

Notify Ecology and the Department of Fish and Wildlife prior to any alteration or relocation of a watercourse, and submit evidence of such notification to the Federal Insurance Administration. (*See Latah Critical Areas Ordinance (Ordinance No. 181)*, Section 7.0 – *Frequently Flooded Areas*).

Require that maintenance is provided within the altered or relocated portion of said watercourse so that the flood carrying capacity is not diminished.

SMP 9.4 Structural Flood Hazard Reduction

Allow new structural flood hazard reduction* measures only:

- Where scientific and engineering analysis has demonstrated it to be necessary to protect existing developments and new developments that contribute to the long term economic vitality of the town, when non-structural methods are infeasible, and mitigation is accomplished;
- Landward of associated wetlands and buffer areas except where no alternative exists as documented in an engineering analysis;

- When consistent with current best management practices using natural materials whenever feasible; and,
- When public access is provided.

*An example of a structural flood hazard reduction measure is a structure placed by humans within a stream or river waterward of the ordinary high water level such as, but not limited to, a diversion or modification of water flow to control flooding.

SMP 9.5 Natural Vegetative Buffers

Maintain, protect, and restore natural vegetative buffers that are within the floodway of Hangman Creek that function to stabilize the banks.

SMP 9.6 Substantial Modification.

Realignment and straightening within the stream channel migration zone should be discouraged as a means of flood protection.

3.11 Utilities Element

Goal SMP 10: Maintain and provide adequate utility services within the shoreline environment while preserving and maintaining the natural environment and ecology of the shoreline.

Policies

SMP 10.1 Location

Design, locate, and maintain utilities to assure no net loss of shoreline ecological functions. Locate new public and private facilities and utilities, including, but not limited to, utility production, processing, distribution, and transmission facilities, outside of the shoreline jurisdiction whenever feasible.

SMP 10.2 Existing Rights-of-way

Require new utilities and facilities to be located in existing rights-of-way whenever possible. Give preference to established utility corridors and rights-of-way for upgrades and reconstruction of existing utilities and facilities, unless a location with less potential to impact the shoreline environment is available.

SMP 10.3 Maintenance Design

When existing utilities located within shoreline jurisdiction require maintenance or other improvements, the maintenance/improvement should be designed and implemented to minimize additional impacts on the shoreline.

SMP 10.4 Stormwater Facilities

Stormwater facilities will be designed and located as to minimize environmental impacts within the shoreline jurisdiction. If located within the shoreline jurisdiction they shall require the use of best management practices (e.g. bio-filtration measures), and landscaping with native vegetation to provide habitat, ecological restoration, and aesthetic improvements. All stormwater facilities must protect water quality, manage runoff and address erosion control and sedimentation.

3.12 Critical Areas Element

Goal SMP 11: Preserve and protect existing ecological functions and ecosystem-wide processes within wetlands, fish and wildlife habitat conservation areas, geologically hazardous areas and frequently flooded areas. Ensure no net loss of ecological function within these critical areas.

Policies

SMP 11.1 Consistency with Critical Areas Goals and Policies

Ensure the critical area goals and policies for the Shoreline Master Program are consistent with the critical areas goals and policies contained in the Comprehensive Plan.

SMP 11.2 No net loss of ecological function

Ensure regulatory protection measures developed for the shoreline area ensure “no net loss of shoreline ecological functions” necessary to sustain shoreline natural resources as defined by Department of Ecology guidelines adopted pursuant to RCW 90.58.060.

SMP 11.3 Preserve and protect critical areas defined as wetlands through protective measures

Rate wetlands based on the quality of the wetland and the ecological function they serve. Develop protective measures (i.e. buffer setbacks) tailored to the wetland quality and function, and consider the characteristics and setting of the buffer and the impacts on adjacent land use.

SMP 11.4 Preserve and protect critical areas defined as wetlands through mitigation sequencing

Base wetland mitigation on the wetland rating and require mitigation sequencing. Only allow compensatory mitigation after mitigation sequencing has been applied and higher-priority means of mitigation have been deemed infeasible. Mitigation sequencing is further identified in section 4.6.2.

SMP 11.5 Wetland Elimination

Wetland elimination as the result of fill or grading as part of a conversion to commercial or residential use shall be discouraged.

SMP 11.6 Protect people and property from risk associated with critical areas defined as Geologically Hazardous Areas

Limit development that would cause foreseeable risk from geological conditions to people or property. Do not allow development that will require structural shoreline stabilization except in the limited cases where it is necessary to protect an allowed use and no alternative location is available. Allow structural shoreline stabilization to protect existing homes only when relocation or reconstruction is infeasible. Do not allow structural shoreline stabilization that will result in a net loss of ecological function.

SMP 11.7 Preserve and protect critical areas defined as Critical Area Ordinance fish and wildlife habitat conservation areas

Develop measures that assure no net loss of ecological functions of river, lake and stream corridors associated with fish and wildlife habitat. Integrate the protection of fish and wildlife habitat with flood hazard reduction and other fish and wildlife management provisions. Develop measures that authorize and facilitate habitat restoration projects.

SMP 11.8 Preserve and protect critical areas defined as Critical Aquifer Recharge Areas.

Protect the hydrologic connections between water bodies, water courses, and associated wetlands. Integrate the protection of *critical aquifer recharge areas* with jurisdictional and non-jurisdictional aquifer protection measures such as Watershed Management Plans, Wellhead Protection Plans, Department of Natural Resources Forest Practices, and others as appropriate.

SMP 11.9 Protect people and property from risk associated with critical areas defined as Frequently Flooded Areas

Limit development that would cause foreseeable risk to people and property from frequent flooding. Ensure frequently flooded areas are fully addressed in the goals and policies of the Flood Hazard Reduction element in this plan.

SECTION 4 – GENERAL SHORELINE REGULATIONS

Based on the Goals and Policies established for the Shoreline Master Program (SMP), the following regulations apply to all new uses, developments, and activities within the Town’s Shoreline Jurisdiction regardless of Environmental Designation.

These regulations are in addition to other adopted ordinances and rules. Where conflicts exist between regulations, those that provide more substantive protection to the shoreline area shall apply. These regulations are intended to make shoreline development responsive to specific needs and opportunities within the Town’s shorelines, protect the public’s interest in the shorelines’ recreational and aesthetic values and assure, at a minimum, no net loss of ecological functions necessary to sustain shoreline natural resources. These provisions address the elements of a SMP as required by RCW 90.58.100(2) and implement the governing principles of the SMP Guidelines as established in WAC 173-26-186.

4.1 Archaeological and Historic Resources

4.1.1 Applicability

The following provisions apply to archaeological and historic resources that are either recorded at the state historic preservation office and/or by local jurisdictions or have been inadvertently uncovered. Archaeological sites located both in and outside shoreline jurisdiction are subject to chapter 27.44 RCW (Indian graves and records) and chapter 27.53 RCW (Archaeological sites and records). Development or uses that may impact such sites shall comply with chapter 25-48 WAC as well as the provisions of this chapter.

4.1.2 Regulations

1. Developments that propose to alter historic or culturally significant resources identified by the National Trust for Historic Preservation, the State Department of Archeology and Historic Preservation, the Town, or resources that could potentially be designated as historically or culturally significant, shall follow applicable Federal, State, County, or local review processes.
2. If historic, cultural, and/or archaeological resources are uncovered during excavation, developers and property owners shall immediately stop work and notify the Town, the Washington State Department of Archeology and Historic Preservation and affected Tribes.
3. Permits issued in areas with probable or documented cultural and archaeological resources require a site inspection or evaluation by a professional archaeologist in coordination and consultation with affected Indian tribes.

4.2 Critical Areas

4.2.1 Applicability

This shoreline master program provides for the management of critical areas designated under RCW 36.70A.170 (1)(d) located within the shoreline jurisdiction pursuant to the provisions of RCW 90.58.090(4) and 36.70A.480(3) as amended by Chapter 107, Laws of 2010 (EHB 1653).

Critical area protection measures within shoreline jurisdiction shall be consistent with the Spokane County Critical Areas Ordinance (Critical Areas Ordinance (Chapter 11.20), August 27, 2013).

4.2.2 Regulations

1. Critical areas within the shoreline jurisdiction are managed through the provisions of this Shoreline Master Program. Critical areas are specified in the following sections of the Spokane County Critical Areas Ordinance (August 27, 2013) which are hereby adopted by reference as use regulations of this SMP:
 - Section 11.20.050 Wetlands
 - Section 11.20.060 Fish & Wildlife Habitat & Species Conservation Areas
 - Section 11.20.070 Geologically Hazardous Areas
 - Section 11.20.075 Critical Aquifer Recharge Areas
 - Section 11.20.090 Appendix O-Critical Areas Maps
2. Portions of the regulations and provisions of the Spokane County Critical Areas are herein adopted as regulations in the Shoreline Master Program as follows:
 - a. If provisions of the Critical Areas Ordinance and other parts of the SMP conflict, the provisions of the SMP shall apply.
 - b. Provisions of the Critical Area Ordinance adopted as regulations of this shoreline master program shall be administered exclusively through Section 5, and in accordance with the goals, policies and all other provisions of this master program.
 - c. Specific provisions of the Spokane County Critical Area Ordinance are adopted by reference as use regulations of the Rockford SMP and include:
 - Section 11.20.050 Wetlands;
 - Section 11.20.070 Geologically Hazardous Areas;
 - Section 11.20.075 Critical Aquifer Recharge Areas;
 - Section 11.20.080 Incentives of the Spokane County Critical Area Ordinance; and,
 - Section 11.20.090 Appendix O- Critical Areas Maps.
 - d. Specific provisions of the Spokane County Critical Area Ordinance not adopted as use regulations of the SCSMP include:
 - Section 11.20.010 Title, Purpose and Intent;
 - Section 11.20.020 Definitions;

- Section 11.20.030 General Provisions;
 - Section 11.20.040 Emergency Permits, Reasonable Use Exception;
 - Subsection 11.20.050C.6.c, storm water management facilities;
 - Subsection 11.20.060C.1.g, reference to WAC 222-16-031; and
 - Subsection 11.20.060C.1.h buffer widths for Type S streams.
3. The provisions of the Spokane County Critical Areas Ordinance, as adopted into this Shoreline Master Program, shall apply to any use, modification or development within jurisdiction of this master program.
 4. For development within critical areas within shoreline jurisdiction, the following shall apply:
 - a. Any use, modification, or development within critical areas shall result in no net loss of ecological functions.
 - b. Any use, modification, or development shall only be approved, and shall only proceed after meeting the requirements for mitigation sequencing as specified in Section 4 of this Shoreline Master Program.
 - c. Reasonable Use Exceptions pursuant to the Spokane County Critical Area Ordinance, Spokane County Code Chapter 11.20, are not applicable within the jurisdiction of this Shoreline Master Program.

4.3 Flood Hazard Reduction

4.3.1 Applicability

The provisions of this subsection apply to actions taken within that portion of the 100-year floodplain that is located within the Town's Shoreline Jurisdiction. This subsection regulates uses, development, and shoreline modifications to reduce flood damage or hazard and that may increase flood hazards. Flood hazard reduction measures may consist of nonstructural measures, such as setbacks, land use controls, wetland restoration, use relocation, biotechnical measures, and storm water management programs, and of structural measures, such as dikes, levees, revetments, floodwalls, channel realignment, and elevation of structures consistent with the National Flood Insurance Program and RCW 86.12. Most flood hazard reduction projects will require additional permits from state and federal agencies.

Flood hazard reduction measures within shoreline jurisdiction shall be consistent with the Latah Critical Areas Ordinance, Section 7.0 – *Frequently Flooded Areas* (Latah Critical Areas Ordinance (Ordinance No. 181), adopted on September 16, 1997).

4.3.2 Regulations

1. Development in flood plains should not significantly or cumulatively increase flood hazard or be inconsistent with an adopted comprehensive flood hazard management plan.

2. New development or new uses in the shoreline jurisdiction, including the subdivision of land, should not be established when it would be reasonably foreseeable that the development or use would require structural flood hazard reduction measures within the channel migration zone or floodway unless there is a community benefit related to flood protection, economic development, or for critical municipal uses.
3. The following uses and activities may be appropriate and/or necessary within the channel migration zone or floodway:
 - a. Actions that protect or restore ecosystem-wide processes or ecological functions.
 - b. Actions that reduce flood hazard including dredging for flood management purposes and repair and maintenance of existing dikes including vegetation removal if needed for dike stability or to maintain the design river flow. Flood hazard reduction measures must be included in an adopted comprehensive flood hazard management plan.
 - c. Existing and ongoing agricultural practices provided that no new restrictions to channel movement occur.
 - d. Bridges, utility lines, and other public utility and transportation structures where no other feasible alternative exists or the alternative would result in unreasonable and disproportionate cost. Where such structures are allowed, mitigation shall address impacted functions and processes.
 - e. Repair and maintenance of an existing legal use, provided that such actions do not cause significant ecological impacts or increase flood hazards to other uses.
 - f. Modifications or additions to an existing nonagricultural legal use, provided that channel migration is not further limited and that the new development includes appropriate protection of ecological functions.
 - g. Measures to reduce shoreline erosion, provided that it is demonstrated that the erosion rate exceeds that which would normally occur in a natural condition, that the measure does not interfere with fluvial hydrological and geomorphological processes normally acting in natural conditions, and that the measure includes appropriate mitigation of impacts to ecological functions associated with the river or stream.
4. New structural flood hazard reduction measures are allowed in the shoreline jurisdiction only when it can be demonstrated by a scientific and engineering analysis that they are necessary to protect existing structures or provide a community benefit related to flood protection, economic development, or for critical municipal uses, that nonstructural measures are not feasible, that impacts on ecological functions and priority species and habitats can be successfully mitigated so as to assure no net loss, and that appropriate vegetation conservation actions are undertaken consistent with WAC [173-26-221](#)(5).
5. New structural flood hazard reduction measures are allowed landward of associated wetlands, and vegetation conservation areas, except for actions that increase ecological functions, such as wetland restoration. The need for, and analysis of feasible alternatives to, structural improvements shall be documented through an engineering and scientific analysis.

6. New structural public flood hazard reduction measures, such as dikes and levees, shall dedicate and improve public access unless public access improvements are considered infeasible in accordance with Section 4.5.2(7).
7. The Town may require from the applicant as appropriate during its review of shoreline flood management projects and programs the following information:
 - a. Stream channel hydraulics and floodway characteristics, up and downstream from the project area;
 - b. Description of existing shoreline stabilization and flood protection works within the area;
 - c. Physical, geological, and soil characteristics of the area;
 - d. Biological resources and predicted impact to the ecology, including fish, vegetation, and animal habitat;
 - e. Predicted impact upon area, shore, and hydraulic processes, adjacent properties, and shoreline and water uses; and
 - f. Analysis of alternative flood protection measures, both non-structural and structural.
8. The Town shall require engineered design of flood protection works where such projects may cause interference with normal geo-hydraulic processes, off-site impacts, or adverse effects to shoreline resources and uses. The town may retain consultants at the applicant's expense to assist in the review of the technical studies if needed.

4.4 Public Access

4.4.1 Applicability

Public access includes the ability of the general public to reach, touch, and enjoy the water's edge, to travel on the waters of the state, and to view the water and the shoreline from adjacent locations.

4.4.2 Regulations

1. Public access shall be required for all public shoreline development and uses, except where it is demonstrated to be infeasible.
2. Dedicated and improved public access sites shall be required for all new development and for subdivisions of land into more than four parcels except:
 - a. Where it is demonstrated to be infeasible due to reasons of incompatible uses, safety, security, or impact to the shoreline environment or due to constitutional or other legal limitations that may be applicable.
 - b. For individual single-family residences not part of a development planned for more than four parcels.

3. New development shall consider visual public access to the shorelines from public right of ways and shall minimize blocking views from a substantial number of residences.
4. Public access sites shall be fully developed and available for public use at the time of occupancy or use of the development or activity.
5. Requirement of public access to shorelines does not confer the right to enter upon or cross private property, except for within dedicated and marked public easements.
6. Public access sites shall be designed to result in no net loss of shoreline ecological functions.
7. Public access may be considered infeasible if the Applicant can show that a shoreline development or use demonstrates and the Town determines that one or more of the following provisions apply:
 - a. Unavoidable health or safety hazards to the public;
 - b. Inherent security requirements of the development or use cannot be satisfied through alternative design;
 - c. The cost of providing the access, easement, or an alternative amenity is unreasonably disproportionate to the total long-term cost of the development;
 - d. Unacceptable environmental harm will result from the public access which cannot be mitigated; or
 - e. Significant undue and unavoidable conflict between the proposed access and adjacent uses will occur and it cannot be mitigated.

4.5 Shoreline Vegetation Conservation

4.5.1 Applicability

Per WAC 173-26-221(5), Vegetation conservation includes activities to protect and restore vegetation along or near shorelines that contribute to shoreline ecological functions. Vegetation conservation also protects human safety and property, increases the stability of river banks, reduces the need for structural shoreline stabilization measures, improves the visual and aesthetic qualities of the shoreline, protects plant and animal species and their habitats, and enhances shoreline uses. Vegetation conservation regulations do not apply retroactively to existing uses and structures, activities related to the establishment or maintenance of yards or gardens associated with residential development, noxious weed removal, or dead or hazardous tree removal.

4.5.2 Regulations

1. Vegetation conservation standards shall comply with the implement the principles in WAC 173-26-221 (5)(b).
2. Clearing and grading activities and related alteration of the natural landscape shall only be allowed in association with a permitted shoreline use or development with limited exceptions as set forth below:

- a. Removal of noxious weeds as listed by the state in Chapter 16-750 WAC, provided such activity shall be conducted in a manner consistent with best management practices. Native vegetation shall be promptly reestablished in the disturbed area.
 - b. Removal of vegetation along flood control dikes if needed for dike stability or to maintain the design river flow.
3. Visual access to Hangman Creek may consist of the development of a view corridor. An established view corridor may include a physical access trail or walking path to enable an approach to Hangman Creek. To create or establish a view corridor, vegetation clearing would be allowed up to a 20' wide corridor per individual parcel. Vegetation clearing shall not result in a change of the natural topography, except in the case where it involves the development of a physical access trail in conjunction with the view corridor. Clearing of native vegetation shall be limited to the minimum necessary to accommodate a view corridor and/or physical access trail.
4. Pruning consistent with accepted arboricultural practices, maintenance of existing ornamental landscapes and other activities are allowed pursuant to these regulations, if said modification is conducted in a manner consistent with this Master Program and results in no net loss of ecological functions.
5. The design, construction and location of new development and uses shall, wherever feasible, avoid and minimize the removal or damage of existing native vegetation.
6. Land clearing, grading, filling and alteration of natural drainage features and landforms shall be limited to the minimum necessary for development. Significant trees and other vegetation shall be replaced at an appropriate ratio to assure no net loss is achieved. The Town may require a revegetation plan and a report prepared by a qualified professional to assure impacts are mitigated for new development. The following revegetation requirements shall be followed:
 - a. Surfaces cleared of vegetation and not developed must be replanted with native species or other species as approved by the Town within one (1) year. Replanted areas shall be planned and maintained such that within three (3) years the vegetation is at least ninety (90) percent established.
 - b. In all cases where clearing is followed by revegetation, native plants shall be required. Native vegetation with similar species in quantities designed to achieve no net loss of ecological function shall be required for revegetation of cleared areas that contain existing native vegetation. Existing ornamental landscapes, including grass, may be replaced with similar species, unless mitigation is necessary to address project impacts.
7. The application of herbicides or pesticides in lakes, rivers, streams, wetlands, or ditches requires a permit from the Washington Department of Ecology and may require preparation of a SEPA checklist for review by other agencies. The individual(s) involved must obtain a pesticide applicator license from the Washington State Department of Agriculture.

4.6 Mitigation Sequencing

4.6.1 Applicability

The provisions of this section are intended to achieve no net loss of shoreline ecological functions for all proposed uses, modifications, or developments with the shoreline jurisdiction. All proposals shall analyze the impacts on shoreline ecological functions and include measures to mitigate environmental impacts not otherwise avoided or mitigated by compliance with these regulations or other applicable regulations including the Washington State Environmental Policy Act (SEPA).

4.6.2 Regulations

1. Mitigation shall occur in the following prioritized order:
 - a. Avoiding the impact altogether by not taking a certain action or parts of an action.
 - b. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps to avoid or reduce impacts;
 - c. Rectifying the impact by repairing, rehabilitating or restoring the affected environments;
 - d. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action;
 - e. Compensating for the impact by restoring, rehabilitating, or enhancing substitute shoreline environments; or
 - f. Monitoring the impacts and the compensation project and taking appropriate corrective measures.
2. Mitigation may include a combination of the measures in 1(a) through 1(f) above.
3. As a condition of any permit or approval allowing alteration of shoreline ecological functions, the applicant shall engage in the restoration, rehabilitation, or enhancement of the shoreline environment in order to offset the impacts resulting from the applicants actions.

4.7 Water Quality, Stormwater, and Nonpoint Pollution

4.7.1 Applicability

The provisions of this subsection apply to all development and uses in shoreline jurisdiction that affect water quality.

4.7.2 Regulations

1. All shoreline development, both during and after construction, shall minimize impacts related to surface runoff through control, treatment and release of surface water runoff such that there is no net loss of receiving water quality in the shoreline environment.

2. Stormwater control and discharges shall be in compliance and maintained according to the Spokane Regional Stormwater Manual, Spokane County, April 2008.
3. Shoreline use and development shall minimize the need for chemical fertilizers, pesticides or other similar chemical treatments to prevent contamination of surface and ground water and/or soils and adverse effects on shoreline ecological functions and values.
4. Shoreline development and uses shall adhere to all required setbacks and buffers. Low impact stormwater facilities may be allowed within the shoreline setback.
5. The release of oil, chemical, or hazardous materials onto or into the water is prohibited. Equipment for the transportation, storage, handling, or application of such materials shall be maintained in a safe and leak-proof condition. If there is evidence of leakage, the further use of such equipment shall be suspended until the deficiency has been satisfactorily corrected. During construction, vehicle refueling and vehicle maintenance shall occur outside of regulated shoreline areas.
6. The bulk storage of oil, fuel, chemical, or hazardous materials, on either a temporary or a permanent basis, is prohibited, except for uses allowed by the zoning classification. For the purpose of this section, heating oil, small boat fuel, yard maintenance equipment fuel, propane, sewage sumps, and similar items common to single family residential uses are not included in this definition.

4.8 Introduction - Specific Shoreline Uses

The regulations of this section apply to specific common uses and types of development within the shoreline jurisdiction area. The regulations provide criteria to implement the goals, policies and intent of the SMA and this shoreline master program when evaluating shoreline permit applications.

4.9 General Use Provisions:

4.9.1 Applicability

The provisions in this section apply to all uses and development within the shoreline jurisdiction.

4.9.2 Regulations

1. All shoreline uses will result in no net loss of shoreline ecological function.
2. Shoreline uses are allowed only if the underlying zoning allows the use.
3. All existing uses are allowed per WAC 173-27-080.
4. Uses on adjacent lands outside of the immediate shoreline jurisdiction area shall protect the preferred shoreline uses from being impacted by incompatible uses in accordance with RCW 90.58.340.
5. All development and uses shall conform to **Table 4.1** Shoreline Uses unless otherwise stated.

6. All uses not explicitly covered in this Shoreline Master Program require a Conditional Use Permit. The Town may impose conditions on such projects to ensure that the proposed development meets the intent of this Shoreline Master Program.
7. Shorelines not otherwise designated are assigned an Urban Conservancy designation.

4.9.3 Shoreline Uses and Dimensional Standards Tables

Table 4.1 identifies typical shoreline uses and the level of approval required for shoreline uses and activities described in this Shoreline Master Program as well as dimensional standards and limits for height, buffers, and building setbacks for each shoreline Environmental Designation. Requirements related to each use are described subsequently.

Table 4.1 – Shoreline Uses

KEY			
E = Exempted Use (subject to requirements of the underlying zoning; shoreline permits are not required)			
SD = Shoreline Substantial Development Permit Required			
CU = Conditional Use Permit Required			
X = Prohibited

Shoreline Dimensional Standards(1)			
Maximum Building Height	35 feet	35 feet	N/A
Shoreline Buffer (2)(3)	25 feet	100 feet	N/A
Building setback from shoreline buffer	10 feet	15 feet	N/A

Notes

- (1) Wetlands located within the shoreline jurisdiction shall comply with section 11.20.050 of the Spokane County Critical Areas Ordinance.
- (2) The shoreline buffer is measured horizontally from the ordinary high water mark.
- (3) Shoreline buffers may be reduced via a variance if a hardship exists per section 5.3.3 and the property precludes, or significantly interferes with, reasonable use of the property of these buffer widths and mitigation sequencing as described in Section 4.6 is followed.

4.10 Commercial Development

4.10.1 Applicability

Commercial development means those uses that are involved in wholesale, retail, service and business trade. The provisions in this section apply to all commercial uses permitted within the Mixed Use environmental designation. Commercial development in other environmental jurisdictions is prohibited.

4.10.2 Regulations

1. Commercial development shall not result in a net loss of shoreline ecological functions, to the greatest extent feasible, or have significant adverse impact to other shoreline uses, resources and values provided for in RCW 90.58.020 such as navigation, recreation, and public access.
2. Commercial uses shall be required to provide public access where feasible based on Section 4.5 Public Access.
3. Non-water oriented commercial uses shall be prohibited unless:
 - a. The use is part of a mixed-use project that includes a water-oriented use and provides a public benefit with respect to the SMA's objectives such as providing public access or ecological restoration; or
 - b. The site is physically separated from the shoreline by another property or public right of way.

4.11 Industrial Development

4.11.1 Applicability

Industrial developments are facilities for processing, manufacturing and storage of finished or semi-finished goods and food stuffs. The provisions in this section apply to all industrial uses permitted within the Mixed Use shoreline jurisdiction. Industrial development is prohibited in other environmental designations. These provisions also apply to critical municipal uses not described elsewhere in this shoreline master program.

4.11.2 Regulations

1. Industrial development shall not result in a net loss of shoreline ecological functions, to the greatest extent feasible, or have significant adverse impact to other shoreline uses, resources and values provided for in RCW 90.58.020 such as navigation, recreation, and public access.
2. Applicants for industrial uses shall incorporate public access, with exceptions noted in Section 4.5 Public Access or as provided in WAC 173-26-221(4).
3. New industrial uses and redevelopment shall be encouraged to locate where environmental cleanup and restoration of impacted sites can be accomplished where feasible.
4. New nonwater-oriented industrial development shall be prohibited unless:

- a. the use is part of a mixed-use project that includes water-oriented uses and provides a significant public benefit with respect to the Shoreline Management Act's objectives such as providing public access and ecological restoration; or
 - b. The site is physically separated from the shoreline by another property or public right-of-way.
5. Industrial activity shall utilize the best techniques in design and siting to prevent the release of contaminants into the adjoining water bodies in order to comply with the water quality standards promulgated under the provisions of RCW 90.48 and Section 2.6 Water Quality, Stormwater, and Nonpoint Pollution.

4.12 Residential Development

4.12.1 Applicability

Residential development means one or more buildings, structures, lots, parcels, or portions thereof, which are designed for and used or intended to be used to provide a place of abode for human beings. This includes the creation of new residential lots through land division and single family residences and other detached dwellings together with accessory uses and structures normally applicable to residential uses located landward of the OHWM, including, but not limited to, swimming pools, garages, sheds, fences and saunas. Single-Family and Multi-Family development is limited to those underlying zones that allow it and subject to the requirements therein.

A Shoreline Substantial Development Permit is not required for construction by an owner, lessee or contract purchaser of a single-family residence for his own use or the use of his family. However, such construction and all normal accessory structures must otherwise conform to this Shoreline Master Program.

4.12.2 Regulations

1. Single family residential development is permitted in all shoreline environments subject to the standards of the underlying zoning regulations and the General Shoreline Regulations of this shoreline master program.
2. New residential development, including accessory uses and structures, shall be sufficiently set back from steep slopes and shorelines vulnerable to erosion so that structural improvements, including bluff walls and other stabilization structures, are not required to protect structures and uses.
3. All additions to residential structures must comply with standards in this shoreline master program.
4. Uses and facilities associated with residential development, which are identified as separate use activities in this Shoreline Master Program, such as land disturbing activities, are subject to the regulations established for those uses.

5. New single-family residential accessory structures, excluding accessory dwelling units, may be located waterward of the shoreline building setback provided that all of the following criteria are met:
 - a. The combined building footprint of all accessory structures does not exceed ten (10) percent of the lot area;
 - b. Structures are located outside of wetlands, streams, and their associated buffers; and
 - c. Potential impacts are managed consistent with this Shoreline Master Program. Where environmental impacts cannot be otherwise avoided or mitigated in compliance with this Shoreline Master Program, mitigation sequencing in accordance with Section 4.7 Mitigation Sequencing shall be implemented.
6. Residential development shall be located and designed to avoid the need for structural shore defense and flood protection works.
7. Storm drainage facilities shall include provisions to prevent the direct entry of uncontrolled and untreated surface water runoff into receiving waters as specified in the Spokane County Regional Stormwater Regulations, April 2008.
8. Subdivisions and planned unit developments of more than four (4) waterfront lots/units shall dedicate, improve, and provide maintenance provisions for a pedestrian easement that provides area sufficient to ensure usable access to and along the shoreline for all residents of the development.

4.13 Recreational Development

4.13.1 Applicability

Recreational uses include passive activities, such as walking, viewing and fishing and active uses, such as swimming, boating, and other outdoor recreation uses. This section applies to both public and private noncommercial shoreline recreational facilities (excluding private residences). Commercial recreational development shall be consistent with the provisions for commercial development as water orientated use.

4.13.2 Regulations

1. All recreational developments should make adequate provisions for:
 - a. Vehicular and pedestrian access, both on-site and off-site;
 - b. Proper water, solid waste, and sewage disposal methods;
 - c. Security and fire protection for the use itself and for any use-related impacts to adjacent private property;
 - d. The prevention of trespass onto adjacent properties, including but not limited to landscaping and fencing; and

- e. Buffering of development from adjacent private property or natural areas.
2. Valuable shoreline resources and fragile or unique areas, such as wetlands and accretion shore forms, shall be used only for low impact and nonstructural recreation activities.
3. For recreation developments that require the use of fertilizers, pesticides, or other chemicals, the property owner shall submit plans demonstrating the methods to be used to prevent these chemical applications and resultant leachate from entering adjacent water bodies.
4. No recreational buildings or structures shall be built waterward of the OHWM, except water-dependent and/or water-enjoyment structures such as bridges, viewing platforms, and non-motorized boat ramps.
5. Recreational buildings and structures shall be the minimum size necessary to support the structures and intended uses.
6. Proposals for recreational development shall include adequate facilities for water supply, sewage, and garbage disposal.

4.14 Agriculture

4.14.1 Applicability

Agriculture includes, but is not limited to, the commercial production of horticultural, viticulture, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, or Christmas trees not subject to the excise tax imposed by RCW 84.33.100 through 84.33.140; or livestock, that has long-term commercial significance as well as the other definitions of agricultural use found in WAC 173-26-020(3). In all cases, the use of agriculture related terms shall be consistent with the specific meanings provided in WAC 173-26-020. This master program applies only to new agricultural activities, and shall not require modification of or limit existing and ongoing agricultural activities within the shoreline jurisdiction, consistent with WAC 17-26-241.

4.14.2 Regulations

1. Ongoing agricultural uses are exempt from this Shoreline master program.
2. New agricultural uses or a change in agricultural use within the shoreline jurisdiction are not exempt and are subject to the requirements identified in WAC 173-26-241.
3. Agricultural development shall conform to applicable state and federal policies and regulations, provided they are consistent with the SMA and this shoreline master program.
4. All agricultural activities shall occur outside of the established shoreline buffer and setback.
5. The removal of native vegetation within the shoreline buffer and setback to accommodate agricultural activities shall be prohibited.
6. A buffer of natural or planted permanent native vegetation not less than 20 feet in width, measured perpendicular to the shoreline, shall be maintained between areas of new

development for crops, grazing, or other agricultural activity and adjacent waters and associated wetlands.

7. Water withdrawals from regulated water bodies for irrigation purposes shall be subject to Ecology rules and regulations.

4.15 In-stream Structures

4.15.1 Applicability

For the purposes of this Shoreline Master Program, “in-stream structure” means a structure placed by humans within a stream or river waterward of the ordinary high water mark that either causes or has the potential to cause water impoundment or the diversion, obstruction, or modification of water flow. In-stream structures may include those for hydroelectric generation, irrigation, water supply, flood control, transportation, utility service transmission, fish habitat enhancement, recreation or other purpose.

4.15.2 Regulations

1. In-stream structures shall provide for the protection and preservation of ecosystem-wide processes, ecological functions, and cultural resources, including, but not limited to, fish and fish passage, wildlife and water resources, shoreline critical areas, hydrogeological processes, and natural scenic vistas.
2. The location and planning of in-stream structures shall give due consideration to the full range of public interests, watershed functions and processes, and environmental concerns, with special emphasis on protecting and restoring or enhancing priority habitats and species.
3. In-stream structures shall be sited and designed consistent with appropriate engineering principles, including guidelines of the Washington Department of Fish and Wildlife, Natural Resource Conservation Service, the U.S. Army Corps of Engineers, and this Shoreline Master Program.
4. In-stream structures shall be constructed and maintained in a manner that does not degrade the quality of affected waters.
5. Natural in-stream features such as snags, uprooted trees or stumps should be left in place unless it can be demonstrated that they are actually causing bank erosion or higher flood stages.
6. In-stream structures shall allow for normal ground water movement and surface runoff.
7. In-stream structures shall preserve or enhance valuable recreation resources and aesthetic values.
8. No in-stream structure may be constructed without the developer having obtained all applicable federal, state, and local permits and approvals.

4.16 Transportation

4.16.1 Applicability

Transportation facilities are those structures and developments that aid in land, air, and water surface movement of people, goods, and services. They include roads and highways, bridges (including pedestrian bridges), bikeways, trails, railroads, and other related facilities.

4.16.2 Regulations

1. New road and bridge construction in the shoreline jurisdiction shall be allowed only when related to and necessary for the support of permitted shoreline activities.
2. Transportation facilities and services shall utilize existing transportation corridors wherever possible.
3. Shoreline transportation facilities shall be located and designed to avoid steep or unstable areas and fit the existing topography to minimize cuts and fills.
4. New transportation facilities shall be located and designed to minimize or prevent the need for shoreline modifications.
5. All bridges must be built large enough to allow the passage of water and debris during a 100-year return storm event. Bridge abutments and piers shall be located outside of the floodways if feasible.
6. Where feasible bridges and transportation corridors shall be designed to support multiple uses including utilities and pedestrian use.
7. Expansion of existing transportation facilities within the shoreline jurisdiction shall be allowed only when the applicant demonstrates that:
 - a. No alternative route is feasible;
 - b. The roadway is constructed and maintained to cause the least possible adverse impact on the land and water environment; and
 - c. The roadway is found to be in the public interest.
8. Transportation facility development shall result in no net loss of shoreline ecological functions. Mitigation shall be provided as necessary to meet this requirement.

4.17 Parking

4.17.1 Applicability

Parking is the temporary storage of automobiles or other motorized vehicles. The following provisions apply only to parking that is accessory to a permitted shoreline use. Parking as a primary use and parking which serves a use not permitted in shoreline jurisdiction is prohibited.

4.17.2 Regulations

1. Parking areas within the shoreline jurisdiction shall be located outside shoreline buffers and setbacks for the applicable Shoreline Environmental Designation.
2. Parking in the shoreline jurisdiction must directly serve an approved shoreline use.
3. Parking shall be located on the landward side of the development if feasible.
4. Landscape screening is required between the parking area and adjacent shorelines and properties and shall consist of native vegetation.
5. The requirement for screening may be waived if screening would obstruct a significant view from public property or public roadway.
6. Parking or storage of recreational vehicles or travel trailers as a primary use shall be prohibited in the shoreline jurisdiction.

4.18 Utilities

4.18.1 Applicability

Utilities are services and facilities that produce, transmit, store, process or dispose of electric power, gas, water, sewage, and communications. Utilities in this SMP are divided into primary and service based on type of use.

Primary utilities include substations, pump stations, treatment plants, sanitary sewer outfalls and lift stations, high voltage electrical transmission lines & facilities, water, sewer or storm drainage mains greater than eight (8) inches in diameter, gas and petroleum transmission lines, and submarine telecommunications cables.

Service utilities are the smaller utilities that provide service to permitted uses. Service utilities include water, electric, natural gas distribution, public sewer collection, cable and telephone service, and appurtenances.

4.18.2 Regulations

1. Utility development shall provide for compatible, multiple-use of sites and rights-of-way when feasible.
2. Utility production and processing facilities, such as power plants and sewage treatment plants, or parts of those facilities that are nonwater-oriented, are prohibited in the shoreline jurisdiction. If no other feasible option is available, these uses may be permitted as a conditional use.
3. New solid waste disposal sites and facilities are prohibited.
4. For new primary utilities in areas where no current utility corridors exist, or the substantial expansion of existing utility corridor rights of way, undergrounding is preferred. Existing utility corridors within the shoreline jurisdiction can be used for upgrades to facilities, if the right of way corridors are not altered.

5. Transmission and distribution facilities shall cross the shoreline jurisdiction by the shortest most direct route feasible, unless such route would cause increased environmental damage.
6. Utilities shall be located and designated so as to avoid the use of any structural or artificial shoreline modification.
7. Underwater utilities are discouraged if other feasible alternatives exist.

4.19 Unclassified Uses and Activities

4.19.1 Applicability

In the event that a proposed shoreline use or activity is not identified or classified in this Shoreline Master Program, the following regulations shall apply.

4.19.2 Regulations

All uses and activities proposed in the Shoreline Management Area that are not classified by provisions in this Shoreline Master Program shall require a conditional use permit.

4.20 Introduction - Shoreline Modifications

Shoreline modification activities are those actions that modify the physical configuration or qualities of the shoreline area. Shoreline modification activities are, by definition, undertaken in support of or in preparation for a permitted shoreline use. A single use may require several different shoreline modification activities.

Shoreline modification activity policies and regulations are intended to assure, at a minimum, no net loss of ecological functions necessary to sustain shoreline natural resources and to prevent, reduce and mitigate the negative environmental impacts of proposed shoreline modifications consistent with the goals of the SMA.

4.20.1 Applicability

The following provisions apply to shoreline modification activities. Additional permits and requirements from state and federal agencies may apply. Where a general standard, environment standard or use standard conflicts with provisions contained in this shoreline master program, the more restrictive shall apply.

4.20.2 Regulations

1. Shoreline modifications must be in support of a permitted shoreline use or provide for human health and safety.
2. Shoreline development shall be located and designed to prevent or minimize the need for shoreline modification activities.
3. In reviewing shoreline modification permit applications, the Town shall require mitigation to reduce significant ecological impacts in accordance with **Section 4.7 Mitigation Sequencing**.

4. The Town shall base all shoreline modification decisions on available scientific and technical information and a comprehensive analysis of site-specific conditions provided by the applicant, as stated in WAC 173-26-231.
5. Shoreline uses and modifications not specifically identified in **Table 4.1** and **Table 4.2** shall be evaluated as a shoreline conditional use and consistent with the management policies and character of the shoreline environment in which they are proposed.

4.20.3 Table of Shoreline Modification Activities

Table 4-2 identifies shoreline modifications and the required level of approval needed. See the standards following the table for an explanation of activities and required conditions for permitted modifications.

Table 4-2 – Shoreline Modifications

KEY			
E = Exempted Use (subject to requirements of the underlying zoning; shoreline permits are not required)			
SD = Shoreline Substantial Development Permit			
CU = Conditional Use			
X = Prohibited			
N/A: Not Applicable			
Shoreline Modification Activity	Shoreline Environmental Designation		
	Mixed Use	Urban Conservancy	Aquatic
Shoreline Stabilization			
“Hard”, such as bulkheads	CU	CU	CU
“Soft”, such as bioengineering	SD	SD	CU
Land Disturbing Activities			
Piers and Docks	CU	X	CU
Fill			
Fill upland of OHWM	CU	CU	X
Fill waterward of OHWM	CU	CU	CU
Breakwaters, Jetties, Groins, and Weirs	CU	X	CU
Clearing and Grading	SD	X	CU
Dredging & Disposal	CU	CU	CU
Maintenance Dredging ⁽¹⁾	SD	X	SD
Shoreline Habitat and Natural Systems Enhancement Projects	SD	SD	SD

Notes: 1. Maintenance dredging only applies to previously dredged areas within Hangman Creek. Dredging activities must be limited to the minimum extent deemed necessary. Dredging spoils shall not be deposited within shoreline jurisdiction.

4.21 Shoreline Stabilization

4.21.1 Applicability

Shoreline stabilization includes actions taken to address erosion impacts to property and dwellings, businesses, or structures caused by natural processes, such as current, flood, tides, wind, or wave action. These actions include structural and nonstructural methods. "Hard" structural stabilization measures refer to those with solid, hard surfaces, such as concrete bulkheads, while "soft" structural measures rely on less rigid materials, such as bioengineered vegetation measures. Nonstructural methods include building setbacks, relocation of the structure to be protected, ground water management, and planning and regulatory measures to avoid the need for structural stabilization.

4.21.2 Regulations

New Development

1. New development, including subdivision of land, shall be designed and located to prevent the need for future shoreline stabilization, based upon hydrological or geotechnical analysis.
2. New development on steep slopes or bluffs shall be set back from the slope to ensure that shoreline stabilization is unlikely to be necessary during the life of the structure, as demonstrated by a geotechnical analysis.
3. New development that would require shoreline stabilization which causes significant impacts to adjacent or down-current properties and shoreline areas shall be prohibited.
4. Subdivision of property that would require significant vegetation removal or shoreline modification that adversely impacts ecological functions shall be prohibited.

4.21.3 Regulations

New Structural Stabilization

1. New structural stabilization measures shall not be allowed except when necessary as demonstrated in the following manner:
 - a. To protect existing primary structures.
 - b. New or enlarged structural shoreline stabilization measures for an existing primary structure, including residences, should not be allowed unless there is conclusive evidence, documented by a geotechnical analysis, which demonstrates that the structure is in danger from shoreline erosion. Normal sloughing, erosion of steep bluffs, or shoreline erosion itself, without a scientific or geotechnical analysis, is not demonstration of need. The geotechnical analysis should evaluate on-site drainage issues and address drainage problems away from the shoreline edge before considering structural shoreline stabilization.
 - c. The erosion control structure will not result in a net loss of shoreline ecological functions.

- d. To protect existing development from flooding. Flooding needs to be documented and new structural stabilization structures need to be identified in the town's flood management program.
 - e. The proposed stabilization shall not result in a net loss of ecological functions or impact sediment transport.
2. New stabilization structures in support of projects for the restoration of ecological functions or hazardous substance remediation projects pursuant to RCW 70.105D shall be allowed when consistent with the environmental designation or when all of the following conditions apply: nonstructural measures, planting vegetation, or installing on-site drainage improvements are not feasible or not sufficient; and the stabilization structure shall not result in a net loss of shoreline ecological functions.
 3. Shoreline stabilization structures shall be limited to the minimum size necessary. Soft approaches shall be used unless demonstrated not to be sufficient to protect structures, dwellings, and businesses.
 4. Soft shoreline stabilization measures that provide restoration of shoreline ecological functions may be permitted waterward of the ordinary high water mark subject to state and federal approvals.
 5. Public access shall be required as part of publicly financed shoreline erosion control measures except where such access is determined to be infeasible because of incompatible uses, safety, security, or harm to ecological functions.
 6. Professional engineering design of all shoreline stabilization or modification structures is required per WAC 173-26-231(3)(iii).

4.22 Land Disturbing Activities

4.22.1 Applicability

All land disturbing activities shall only be allowed in association with a permitted shoreline development.

4.22.2 Regulations

1. All land disturbing activities shall be limited to the minimum necessary for the intended development, including any clearing and grading approved as part of a landscape plan. Clearing invasive, non-native, shoreline vegetation listed on the Spokane County Noxious Weed List is permitted, provided best management practices are used as recommended by a qualified professional, and native vegetation is promptly reestablished in the disturbed area.
2. Mature native trees and intact stands of native vegetation shall be retained if feasible. If infeasible the native vegetation shall be replaced at a 2:1 ratio of the stems. Native plant areas and trees shall be shown on the project site plan.

3. All shoreline development and activities shall use measures identified in the Spokane Regional Stormwater Manual, Spokane County, April 2008. Stabilization of exposed surfaces subject to erosion along shorelines shall, whenever feasible, utilize soil bioengineering techniques.
4. For land disturbing activities that require a shoreline permit, a plan prepared by a qualified professional shall be provided that addresses species removal; revegetation; irrigation; erosion and sedimentation control; and methods of shoreline protection.

4.23 Piers and Docks

4.23.1 Applicability

Piers and docks are structures which abut the shoreline and are used as a landing or moorage place for recreational watercraft. Piers are built on fixed platforms supported by piles above the water, while docks generally float upon the water. Docks serving four or fewer single-family residences are excluded from these regulations. Viewing platforms that are built above or which float upon the water are regulated per the requirements below.

Piers for private, noncommercial pleasure craft, common to a single-family residence, and costing less than ten thousand (10,000) dollars are exempt from the requirement for a Shoreline Substantial Development Permit pursuant to RCW 90.58.030(3)(e)(vii) and WAC 173-27-040(2)(h). The ten thousand (10,000) dollar threshold may be adjusted for inflation by the State Office of Financial Management. Any changes to this monetary threshold adopted by the State Office of Financial Management are hereby incorporated by reference.

4.23.2 Regulations

1. New piers, viewing platforms, and docks shall only be allowed to provide for public water-dependent uses, public access, and single-family residences.
2. New piers and docks will be permitted only when a specific need is demonstrated except for docks accessory to single family residences.
3. New piers and docks are restricted to the minimum size necessary to serve a proposed water-dependent use based upon a needs analysis provided by the Applicant.
4. Location, design and construction of all new piers, viewing platforms and docks shall result in no net loss of ecological processes and functions, to the greatest extent feasible, and avoid, minimize and mitigate for ecological impacts.
5. Wood treated with toxic compounds shall not be used for decking or other in-water components.

4.24 Fill

4.24.1 Applicability

Fill is the placement of soil, sand, rock, gravel, sediment, earth retaining structure or other material to an area waterward of the OHWM, in wetlands, or on shorelands in a manner that raises the elevation or creates dry land.

4.24.2 Regulations

1. Fill proposals must demonstrate, at a minimum, that they will result in no net loss of shoreline ecological functions.
2. Fills waterward of the OHWM shall be restricted to the minimum necessary to:
 - a. Support water-dependent uses;
 - b. Provide public access;
 - c. Allow for the remediation and disposal of contaminated sediments as part of an interagency clean-up plan;
 - d. Provide for the expansion or alteration of transportation facilities when no other alternatives are feasible; and,
 - e. Accomplish mitigation actions, environmental restoration and enhancement projects, and only when other solutions would result in greater environmental impact.
3. Fills shall be designed, constructed, and maintained to prevent, minimize, and control all material movement, erosion, and sedimentation from the affected area.
4. Fills shall be located, designed and constructed to protect ecological functions including channel migration.
5. Fills shall be subject to the provisions of Section 4.7 Mitigation Sequencing.
6. All perimeters of fills shall be provided with vegetation and bank stabilization to provide erosion control and sediment capture.
7. Fill shall be permitted only where it is demonstrated that the proposed action will not:
 - a. Result in significant damage to water quality, fish, aquatic habitat, and/or wildlife habitat; or
 - b. Adversely alter natural drainage and circulation patterns, or significantly reduce floodwater holding capabilities.
8. Any placement or removal of materials landward of the OHWM shall comply with the provisions of the Shoreline Vegetation Conservation section of this SMP.

4.25 Dikes and Levees, Groins, and Weirs

4.25.1 Applicability

Dikes and levees are flood protection structures placed generally parallel to the stream flow. Groins are obstructions projecting into a stream that control deposition and scour by deflecting current away from the bank. Weirs are structures that control water elevation and measure and regulate flow.

4.25.2 Regulations

1. Dikes and levees, groins and weirs located waterward of the OHWM shall be allowed only where necessary to support flood protection, water-dependent uses, public access, shoreline stabilization, or publically owned and/or maintained projects which do not degrade natural channel morphology or river processes, or cause adverse impacts to aquatic and terrestrial wildlife.
2. Dikes and levees, groins, and weirs are allowed only with a shoreline conditional use permit, except for those structures installed to protect or restore ecological functions, such as woody debris installed in streams.
3. Dikes and levees shall be limited to the minimum height required to protect adjacent lands from predicated flood stage as identified in the flood management plan or as required by FEMA for dike recertification.
4. Levees, groins and weirs shall be designed to protect critical areas and shall provide for mitigation according to Section 4.7 Mitigation Sequencing.

4.26 Dredging and Dredge Material Disposal

4.26.1 Applicability

Dredging is the removal or displacement of earth or sediments such as gravel, sand, mud or silt and/or other materials or debris from any stream, or lake and associated shorelines, side channels, and wetlands.

4.26.2 Regulations

1. Dredging shall be permitted only for activities associated with shoreline or aquatic restoration, remediation or flood control.
2. No in-stream work may be initiated without having obtained all applicable federal, state, and local permits and approvals.
3. Maintenance dredging associated with a water dependent use or flood control shall be restricted to maintaining previously authorized dredging areas for the same location, depth and width.
4. New development siting and design shall avoid the need for new and maintenance dredging.
5. Dredging for the primary purpose of obtaining fill or construction material is prohibited, except for projects associated with MTCA or CERCLA habitat restoration, or for other approved restoration efforts.

6. Dredging and dredge spoil disposal shall not occur in wetlands unless for approved maintenance or enhancement.
7. Dredging shall be timed so that it does not interfere with aquatic life.
8. Depositing dredge materials waterward of the OHWM shall be prohibited.
9. Dredge material disposal shall be permitted in the shoreline jurisdiction only as part of an approved shoreline habitat and natural systems enhancement or fish habitat enhancement or watershed restoration project or for flood control.
10. Dredging and spoil disposal shall be permitted only where it is demonstrated that the proposed actions will not:
 - a. Result in significant damage to water quality, fish, and other essential biological elements;
 - b. Adversely alter natural drainage and circulation patterns, currents, or reduce floodwater capacities;
 - c. Adversely impact properly functioning conditions for proposed, threatened, or endangered species; or
 - d. Adversely alter functions and values of the shoreline and associated critical areas and the channel migration zone.

4.27 Shoreline Habitat and Natural Systems Enhancement Projects

4.27.1 Applicability

Shoreline habitat and natural systems enhancement projects include those activities proposed and conducted specifically for the purpose of establishing, restoring, or enhancing shoreline habitat. Such projects may include shoreline modification actions such as modification of vegetation, removal of nonnative or invasive plants, shoreline stabilization, dredging, and filling, provided that the primary purpose of such actions is clearly restoration of the natural character and ecological functions of the shoreline.

4.27.2 Regulations

1. Shoreline habitat and natural systems enhancement projects, including those activities proposed and conducted specifically for the purpose of establishing, restoring, or enhancing habitat for listed species in shorelines, are encouraged, provided such projects' primary purpose is clearly enhancing or restoring the shoreline natural character and ecological functions. The project shall address legitimate enhancement or restoration needs and priorities and facilitate implementation of the restoration plan developed pursuant to WAC 173-26-201(2)(f) and with applicable federal and state permit provisions.
2. Watershed restoration projects as defined in WAC 173-27-040 (2)(o) are exempt from a substantial development permitting.

SECTION 5 - ADMINISTRATIVE PROCEDURES

5.1 Purpose and Applicability

Local governments have the authority and responsibility to enforce master program regulations on all uses and development in the shoreline area. The Shoreline Management Act's provisions are intended to provide for the management of all development and uses within its jurisdiction, whether or not a shoreline permit is required. Its effect is generally on future development and changes in land use. "All proposed uses and development occurring within shoreline jurisdiction must conform to Chapter 90.58 RCW, the Shoreline Management Act, and this master program." Where inconsistencies or conflicts with other sections of the Latah Zoning Ordinance occur, this section shall apply.

A permit, or an exemption declared by the Administrator for a shoreline permit, is required for any development within the Shoreline Management Area. Per WAC 173-27-040(1)(b), "an exemption from the substantial development permit process is not an exemption from compliance with the act or the local Master Program, nor from any other regulatory requirements. A development or use that is listed as a conditional use pursuant to the local Master Program or is an unlisted use, must obtain a conditional use permit even though the development or use does not require a substantial development permit. When a development or use is proposed that does not comply with the bulk, dimensional and performance standards of the Master Program, such development or use can only be authorized by approval of a variance."

5.2 Program Administrator

The City's Shoreline Administrator is hereby vested with:

- Overall responsibility for administering the SMA and this SMP;
- Authority to approve, approve with conditions, or deny shoreline permit revisions in accordance with the policies and provisions of this SMP; and,
- Authority to grant statements of exemption from shoreline substantial development permits in accordance with the policies and provisions of this SMP.

The duties and responsibilities of the Shoreline Administrator shall include:

1. Preparing and using application forms deemed essential for the administration of this SMP.
2. Advising interested citizens and applicants of the goals, policies, regulations, and procedures of this SMP.
3. Making administrative decisions and interpretations of the policies and regulations of this SMP and the SMA.
4. Collecting applicable fees, as established by the Town.
5. Determining that all applications and necessary information and materials are provided.
6. Conducting field inspections, as necessary.

7. Reviewing, insofar as possible, all provided and related information deemed necessary for appropriate applications needs.
8. Determining if a shoreline substantial development permit, conditional use permit or variance permit is required.
9. Providing copies of permit applications to relevant staff and agencies for review and comment.
10. Conducting a thorough review and analysis of shoreline exemption applications; reviewing other staff and agency comments; making written findings and conclusions; and approving, approving with conditions, or denying such exemptions.
11. Submitting shoreline substantial development permit, shoreline variance and conditional use permit applications and written recommendations and findings on such permits to the Planning Commission and Town Council for their consideration and action.
12. Submitting shoreline redesignation permit applications and written recommendations and findings on such permits to the Planning Commission for recommendation to the Town Council.
13. Assuring that proper notice is given to appropriate persons and the public for all hearings.
14. Providing technical and administrative assistance to the Planning Commission and Town Council as required for effective and equitable implementation of this program and the Act.
15. Investigating, developing, and proposing amendments to this SMP as deemed necessary to more effectively and equitably achieve its goals and policies.
16. Enforcing and seeking remedies for alleged violations of this program, the provisions of the SMA and this SMP or of conditions of any approved shoreline permit issued by the Town. The Shoreline Administrator may delegate these enforcement duties to a designated representative.
17. Acting as the primary liaison between local and state agencies in the administration of the SMA and this SMP.
18. Forwarding shoreline permits to Ecology for filing or action.

5.3 Permit Types

5.3.1 Shoreline Substantial Development Permit

The Purpose of the Shoreline Substantial Development Permit is to ensure that substantial development within the shoreline area is accomplished in a manner that protects the shoreline ecology consistent with the this SMP and the Shoreline Management Act, this section establishes criteria for determining the process and conditions under which a shoreline substantial development permit may be acted upon by the Administrator.

A shoreline substantial development permit is subject to the specific review procedure established in 5.4 - SMP Permit Procedures, and the conditions which may be imposed to assure compliance with all applicable regulations. A request for a shoreline substantial development permit use may be disapproved

if the administrator finds the shoreline development is inconsistent with these shoreline regulations, the comprehensive plan or the Shoreline Management Act.

Substantial development as defined by RCW 90.58.030. No use, modification, or development shall be undertaken in the shoreline jurisdiction without first obtaining a shoreline substantial development permit from the Administrator, unless the use or development is specifically identified as permitted or exempt.

Where a substantial development is proposed which would be partly within and partly outside of the shoreline jurisdiction, a shoreline substantial development permit shall be required for the entire development.

An application for a shoreline substantial development permit for a limited utility extension or for the construction of a bulkhead or other measures to protect a single-family residence and its appurtenant structures from shoreline erosion shall be subject to all of the requirements of these shoreline regulations and shall follow the time period for public comment in 5.4.4 – Permit Process. For purposes of this section, a limited utility extension means the extension of a utility service that:

- a. is categorically exempt under chapter 43.21C RCW for one or more of the following: Natural gas, electricity, telephone, water, or sewer;
- b. will serve an existing use in compliance with these shoreline regulations; and,
- c. will not extend more than two thousand five hundred linear feet within the shoreline jurisdiction.

Local government may attach conditions to the approval of permits as necessary to assure consistency of the project with the act and the local master program.

5.3.2 Shoreline Conditional Use Permit

The purpose of a conditional use permit is to allow greater flexibility in administering the use and modification regulations of these shoreline regulations in a manner consistent with the policy of RCW 90.58.020. In authorizing a shoreline conditional use, special conditions may be attached to the permit by the Town or the Department of Ecology to control any undesirable effects of the proposed use.

Uses or modifications not listed in shoreline use table (Chapter 4) may only be authorized as a shoreline conditional use.

Uses which are identified in these shoreline regulations as requiring shoreline conditional use approval, and other uses which, although not expressly mentioned in lists of permitted uses, are permitted in the underlying zones and are not prohibited in the shoreline jurisdiction, may be approved, approved with conditions or denied by the Town Council in specific cases based on the criteria in 5.4.3 – Decision Criteria, as now constituted or hereafter amended, and any additional criteria given in these shoreline regulations. Upon transmittal of the Town Council’s decision to the Department of Ecology (Ecology), Ecology reviews and the permit may be approved, approved with conditions, or denied by ecology.

5.3.3 Shoreline Variance Permit

The purpose of the Variance permit is to grant relief to specific bulk or dimensional requirements set forth in these shoreline regulations and any associated standards appended to these shoreline regulations such as critical areas or buffer requirements where there are extraordinary or unique circumstances relating to the property such that the strict implementation of these shoreline regulations would impose unnecessary hardships on the applicant/proponent or thwart the policy set forth in RCW 90.58.020. Use restrictions may not be varied.

5.3.4 Exemption

The Administrator is hereby authorized to approve or deny requests for written statements of exemption from the substantial development permit requirement for uses and developments within the Shoreline Management Area that are specifically listed in RCW 90.58.030(3)(e) and WAC 173-27-040. The written statement shall indicate the specific exemption of the Master Program that is being applied to the development, and shall provide a summary of the Administrator analysis of the consistency of the project with this Master Program and the Act. The statement shall include any conditions required to assure compliance with the Act or this Master Program.

The burden of proof that a development or use is exempt from the permit process is on the applicant.

If any part of a proposed use, modification, or development is not eligible for exemption, then a shoreline substantial development permit is required for the entire proposed project.

When a development meets the exemption criteria as listed in this section and WAC 173-27-040, and is subject to a United States Army Corps of Engineers Section 10 or Section 404 permit, a copy of the written exemption shall be sent to the Department for approval.

Before issuing an exemption, the Administrator shall review the Master Program to determine if the proposed development requires a variance and/or a conditional use permit.

An exemption from the substantial development permit requirements does not constitute an exemption from the policies and use regulations of the Shoreline Management Act, the provisions of this Master Program or other applicable city, state, or federal requirements. A formal written statement of exemption is required pursuant to WAC 173-27-050.

Exempt developments include (A complete list of exemptions is provided in WAC 173-27-040):

- a. Any development of which the total construction cost or fair market value, whichever is higher, does not exceed six thousand four hundred and sixteen (\$6,416) dollars (as adjusted by the Washington State Office of Financial Management according to RCW 90.58.030(3)(e) (2012 calculation, will be calculated again in 2017), and does not materially interfere with public use of the water or Shorelines of the State. For purposes of determining whether or not a permit is required, the total cost or fair market value shall be based on the value of development that is occurring on Shorelines of the State;

- b. For maintenance outside utility easements: Normal maintenance or normal repair of existing structures or developments, including damage by accident, fire, or elements. "Normal maintenance" includes those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition. "Normal repair" means to restore a development to a state comparable to its original condition within a reasonable period after decay or partial destruction except where repair causes substantial adverse effects to the shoreline resource or environment. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including but not limited to its size, shape, configuration, location and external appearance, and the replacement does not cause substantial adverse effects to shoreline resources or environment;
- c. For maintenance within utility easements: Normal utility maintenance includes operation, maintenance, or repair activities that do not require construction permits. Activities that do not further alter or increase impacts to, or encroach further within the Shoreline Management Area or Native Conservation Area, and there is no increased risk to life or property as a result of the proposed operation, maintenance, or repair. Operation and vegetation management performed in accordance with best management practices that is part of ongoing maintenance of structures, infrastructure, or utilities, provided that such actions are part of regular ongoing maintenance, do not expand further into the Shoreline Management Area or Native Conservation Area and are not the result of an expansion of the structure of utility and do not directly impact endangered species. Normal utility maintenance activities are not subject to new or additional mitigation when they do not expand further into the Shoreline Management Area or Native Conservation Area, are not the result of expansion of the structure or utility, or do not directly impact endangered species.
- d. Construction of a normal protective bulkhead common to single family residences. A "normal protective bulkhead" is constructed at or near the ordinary high water mark to protect an existing single family residence, and is for protecting land from erosion, not for the purpose of creating dry land. Where an existing bulkhead is being replaced, it shall be constructed no further waterward of the existing bulkhead than is necessary for construction of new footings;
- e. Emergency construction necessary to protect property from damage by the elements. Flooding or other seasonal events that can be anticipated and may occur, but are not imminent, are not an emergency;
- f. Construction and practices normal or necessary for farming, irrigation, and ranching activities, including agricultural service roads and utilities on shorelands, construction of a barn or similar agricultural structure, and the construction and maintenance of irrigation structures including but not limited to head gates, pumping facilities, and irrigation channels: Provided, That a feedlot of any size, all processing plants, other activities of a commercial nature, alteration of the contour of the shorelands by leveling or filling other than that which results from normal cultivation, shall not be considered normal or necessary farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal livestock wintering operations;
- g. Construction, installation, or modification of navigational aids such as channel markers and anchor buoys;

- h. Construction on shorelands by an owner, lessee, or contract purchaser of a single family residence for his/her own use or for the use of his/her family, when the residence does not have a building height that exceeds thirty-five (35) feet above average grade and meets all requirements of the Town of Latah Municipal Code and this chapter;
- i. Construction of a dock, including a community dock, designed for pleasure craft only, for the private noncommercial use of the owner, lessee, or contract purchaser of one or more single and/or multi-family residences. A dock is a landing and moorage facility for watercraft and does not include recreational decks, storage facilities, or other appurtenances. This exception applies if the fair market value of the dock does not exceed \$10,000 (ten thousand dollars), but if subsequent construction having a fair market value exceeding \$2,500 (two thousand five hundred dollars) occurs within five years of completion of the prior construction, the subsequent construction shall be considered a substantial development;
- j. Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or other facilities that now exist or are hereafter created or developed as a part of an irrigation system for the primary purpose of making use of system waters, including return flow and artificially stored groundwater from the irrigation of lands;
- k. The marking of property lines or corners, when such marking does not significantly interfere with the normal public use of the surface waters;
- l. Operation and maintenance of any system of dikes, ditches, drains, or other facilities existing on September 8, 1975, which were created, developed or utilized primarily as a part of an agricultural drainage or diking system;
- m. Any project with certification from the Governor of the State of Washington, pursuant to chapter 80.50 RCW;
- n. Watershed restoration projects as defined in WAC 173-27-040. The City shall review the projects for consistency with the Master Program in an expeditious manner and shall issue its decision along with any conditions within forty-five (45) days of receiving all materials necessary to review the request for exemption from the applicant. No fee may be charged for accepting and processing requests for exemption for watershed restoration;
- o. Site exploration and investigation activities that are a prerequisite to preparation of an application for development authorization under this chapter, if:
 - i. The activity does not interfere with the public use of the surface waters;
 - ii. The activity will have no significant adverse impact on the environment including but not limited to fish, wildlife, fish or wildlife habitat, water quality and aesthetic values;
 - iii. The activity does not involve the installation of any structure and upon completion of the activity the vegetation and land configuration of the site are restored to conditions existing before the activity;
 - iv. A private entity seeking development authorization under this section first posts a performance bond or provides other evidence of financial responsibility to the local jurisdiction to ensure that the site is restored to preexisting conditions; and

- v. The activity is not subject to the permit requirements of RCW 90.58.550.
- p. The process of removing or controlling aquatic noxious weeds, as defined in RCW [17.26.020](#), through the use of an herbicide or other treatment methods applicable to weed control that are recommended by a final environmental impact statement published by the department of agriculture or the department of ecology jointly with other state agencies under chapter [43.21C](#) RCW.

5.3.5 Shoreline Substantial Development Permit Letter of Exemption Procedure

State law and the shoreline master program specifically exempt certain types of development from the requirement of obtaining a shoreline substantial development permit. The types of development that are exempted are listed in 5.3.4 – Exemption and WAC 173-27-040. No exempt development, use or activity shall be undertaken within the jurisdiction of the Shoreline Management Act (chapter 90.58 RCW or its successor) and the shoreline master program unless a statement of exemption has been obtained from the Administrator. Burden of proof that a development or use is exempt from the permit process is on the applicant.

Application procedure for a letter of exemption from a shoreline substantial development permit is the same as for any shoreline permit as defined in 5.4.2 – Application Requirements with these additional application materials:

- a. Written explanation of exemption type as defined in 5.3.4 – Exemption and WAC 173-27-040.
- b. A contractor’s bid to verify the total cost or fair market value of the proposal including labor and material, if the proposed exemption category is below the dollar threshold defined in WAC 173-27-040.
- c. A statement from a structural engineer licensed by the State of Washington to verify the need for immediate action, in order to address the imminent threat to public health and safety on the property, if proposed exemption category is for emergency construction as defined in WAC 173-27-040.

All development within the shoreline, even when an exemption from the requirement of a substantial development permit is granted, must be consistent with the policies of the Shoreline Management Act and the shoreline master program. Conditions may be attached to the approval of a shoreline exemption in order to assure consistency of the project with the Shoreline Management Act and the shoreline master program (WAC 173-27-040).

A letter of exemption from a shoreline substantial development permit is not always an exemption from a shoreline conditional use permit or a shoreline variance. A development or use that is listed as a conditional use pursuant to the SMP regulations or is an unlisted use, must obtain a conditional use permit even though the development or use does not require a substantial development permit. When a development or use is proposed that does not comply with the bulk, dimensional and performance standards of the master program, such development or use can only be authorized by approval of a variance (WAC 173-27-040).

In the case of shoreline projects with federal permit review and upon completion of a letter of exemption, the administrator must submit to ecology:

- a. Letter of exemption;
- b. Site plan;
- c. What is being approved; and,
- d. Conditions of approval.

It must also state the specific exemption provision from WAC 173-27-040 and 5.3.4 – Exemption and provide a summary of analysis of the consistency of the project with the SMP and the SMA. It shall contain any SEPA determination made and include the permit data sheet and transmittal letter form (WAC 173-27-990 Appendix A).

The administrator shall review watershed restoration projects as defined in WAC 173-27-040 for consistency with the SMP and shall issue a decision along with any conditions within forty-five days of receiving from the applicant all materials necessary to review the request for exemption. No fee may be charged for accepting and processing requests for exemption for watershed restoration projects as defined in WAC 173-27-040.

5.4 SMP Permit Procedures

5.4.1 General

Procedures for obtaining a shoreline substantial development permit, exemption from a shoreline substantial development permit, shoreline conditional use permit, shoreline variance permit, permit and application revisions, and other procedures pertaining to shorelines are contained in section.

Permits required under this chapter shall be processed consistent with the provisions of and the criteria in this subchapter.

No permit shall be approved unless the proposed development is consistent with the provisions of this Master Program, the Shoreline Management Act, and the rules and regulations adopted by the Washington State Department of Ecology.

Applications for shoreline permits shall also demonstrate compliance with the provisions of this subchapter.

All uses and development shall be carried out in a manner consistent with the Town of Latah Municipal Code and the Shoreline Master Program regardless of whether a substantial development permit, written statement of exemption, variance, or conditional use permit is required.

5.4.2 Application Requirements

1. A complete application for a substantial development, conditional use, or variance permit shall contain, as a minimum, the following information as identified in WAC 193.27.180:
 - a. The name, address and phone number of the applicant. The applicant should be the owner of the property or the primary proponent of the project and not the representative of the owner or primary proponent.
 - b. The name, address and phone number of the applicant's representative if other than the applicant.
 - c. The name, address and phone number of the property owner, if other than the applicant.
 - d. Location of the property. This shall, at a minimum, include the property address and identification of the section, township and range to the nearest quarter, quarter section or latitude and longitude to the nearest minute. All applications for projects located in open water areas away from land shall provide a longitude and latitude location.
 - e. Identification of the name of the shoreline (water body) that the site of the proposal is associated with. This should be the water body from which jurisdiction of the act over the project is derived.
 - f. A general description of the proposed project that includes the proposed use or uses and the activities necessary to accomplish the project.
 - g. A general description of the property as it now exists including its physical characteristics and improvements and structures.
 - h. A general description of the vicinity of the proposed project including identification of the adjacent uses, structures and improvements, intensity of development and physical characteristics.
 - i. A site development plan consisting of maps and elevation drawings, drawn to an appropriate scale to depict clearly all required information, photographs and text which shall include:
 - i. The boundary of the parcel(s) of land upon which the development is proposed.
 - ii. The ordinary high water mark of all water bodies located adjacent to or within the boundary of the project. This may be an approximate location provided, that for any development where a determination of consistency with the applicable regulations requires a precise location of the ordinary high water mark the mark shall be located precisely and the biological and hydrological basis for the location as indicated on the plans shall be included in the development plan. Where the ordinary high water mark is neither adjacent to or within the boundary of the project, the plan shall indicate the distance and direction to the nearest ordinary high water mark of a shoreline.
 - iii. Existing and proposed land contours. The contours shall be at intervals sufficient to accurately determine the existing character of the property and the extent of proposed change to the land that is necessary for the development. Areas within the boundary that

will not be altered by the development may be indicated as such and contours approximated for that area.

- iv. A delineation of all wetland areas that will be altered or used as a part of the development.
 - v. A general indication of the character of vegetation found on the site.
 - vi. The dimensions and locations of all existing and proposed structures and improvements including but not limited to; buildings, paved or graveled areas, roads, utilities, septic tanks and drainfields, material stockpiles or surcharge, and stormwater management facilities.
 - vii. Where applicable, a landscaping plan for the project.
 - viii. Where applicable, plans for development of areas on or off the site as mitigation for impacts associated with the proposed project shall be included and contain information consistent with the requirements of this section.
 - ix. Quantity, source and composition of any fill material that is placed on the site whether temporary or permanent.
 - x. Quantity, composition and destination of any excavated or dredged material.
 - xi. A vicinity map showing the relationship of the property and proposed development or use to roads, utilities, existing developments and uses on adjacent properties.
 - xii. Where applicable, a depiction of the impacts to views from existing residential uses and public areas.
 - xiii. On all variance applications the plans shall clearly indicate where development could occur without approval of a variance, the physical features and circumstances on the property that provide a basis for the request, and the location of adjacent structures and uses.
2. It is the applicant's responsibility to provide proof that the proposed development is consistent with the permit criteria requirements per 5.4.3 – Decision Criteria.
 3. The Administrator may approve, or approve with conditions, substantial development applications and written exemptions from substantial development as long as they comply with criteria imposed by the Master Program and the Shoreline Management Act.
 4. The Administrator may attach to a permit any suitable and reasonable terms or conditions necessary to ensure the purpose and objectives of this Master Program and the Shoreline Management Act.
 5. The Administrator shall deny any application that does not comply with and cannot be conditioned to comply with, the criteria, policies, or requirements of the Master Program or the Shoreline Management Act.

6. The Administrator may require a financial guarantee to assure full compliance with the terms and conditions of any substantial development permit, variance or conditional use permit. The guarantee shall be in an amount to reasonably assure the Town that permitted improvements will be completed within the time stipulated.

5.4.3 Decision Criteria

The purpose of the following sections is to establish the decision criteria for shoreline substantial development, conditional use, and variance permit types regardless of whether the decision is made by the administrator, planning commission, or town council, as applicable.

The burden is upon the applicant to present sufficient evidence relevant to the appropriate criteria in support of the application. The decision-maker must make affirmative findings of fact relative to each criterion or the application must be denied.

1. Shoreline Substantial Development Permit.

A substantial development permit shall be granted only when the development proposed is consistent with the following:

- a. The chapter 90.58 RCW (Shoreline Management Act) and chapter 173-27 WAC (Permits for Development on Shorelines of the State);
- b. Applicable state regulations; and
- c. The map, goals, policies and regulations of the towns shoreline master program.

2. Shoreline Conditional Use Permit.

The purpose of a shoreline conditional use permit is to provide a system within the shoreline master program which allows flexibility in the application of use regulations in a manner consistent with the policies of RCW 90.58.020. In authorizing a conditional use, special conditions may be attached to the permit by the Town or Department of Ecology to prevent undesirable effects of the proposed use and/or to assure consistency of the project with the act and the shoreline master program.

The Town Council is authorized to issue conditional use permits only when all the criteria enumerated in WAC 173-27-160 are met.

Uses which are classified or set forth in the master program as conditional uses may be authorized provided that the applicant demonstrates all of the following:

- a. That the proposed use is consistent with the policies of RCW 90.58.020 and the master program;
- b. That the proposed use will not interfere with the normal public use of public shorelines;
- c. That the proposed use of the site and design of the project is compatible with other authorized uses within the area and with uses planned for the area under the comprehensive plan and shoreline master program;

- d. That the proposed use will cause no significant adverse effects to the shoreline environment in which it is to be located; and
- e. That the public interest suffers no substantial detrimental effect.

In the granting of all conditional use permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if conditional use permits were granted for other developments in the area where similar circumstances exist, the total of the conditional uses shall also remain consistent with the policies of RCW 90.58.020 and shall not produce substantial adverse effects to the shoreline environment.

Other uses which are not classified or set forth in the applicable master program may be authorized as conditional uses provided the applicant can demonstrate consistency with the requirements of this section and the requirements for conditional uses contained in the master program.

Uses which are specifically prohibited by the shoreline master program shall not be authorized by conditional use.

3. *Shoreline Variance Permit.*

The purpose of a variance is to grant relief from specific bulk, dimensional, or performance standard requirements set forth in the Master Program where there are extraordinary or unique circumstances relating to the property such that the strict implementation of this Master Program would impose unnecessary hardships on the applicant or diminish the policies set forth in RCW 90.58.020.

The Town Council is authorized to approve a variance from the specific bulk, dimensional, or performance standards of this Master Program only when all of the criteria enumerated in WAC 173-27-170 are met.

A variance should be granted in circumstances where denial of the permit would prevent accomplishment of the policies enumerated in RCW 90.58.020.

In all instances, the applicant must demonstrate that extraordinary circumstances exist and the public interest will not suffer substantial detrimental effect.

Before making a determination to approve a variance, the Town Council shall consider issues related to the conservation of valuable natural resources and the protection of views from public lands.

A variance issued per Section 7 of the Town of Latah Zoning Ordinance (Ordinance No. 185) shall not be construed to mean approval of a variance from Shoreline Master Program use regulations.

The applicant for a variance must demonstrate that the variance meets the criteria in WAC 173-27-170.

In the granting of all variances, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if variances were granted to other developments and/or uses in the area where similar circumstances exist, the total of the variances shall also remain consistent with the policies of RCW 90.58.020 and shall not cause substantial adverse effects to the shoreline environment.

Variations from the use regulations of the SMP are prohibited.

Variations for development that will be located landward of the OHWM and landward of any wetland within the shoreline jurisdiction may be authorized provided the applicant can demonstrate consistency with the following variance criteria as listed in WAC 173-27-170:

- a. That the strict application of the bulk, dimensional, or performance standards set forth in the SMP precludes, or significantly interferes with, reasonable use of the property.
- b. That the hardship described above is specifically related to the property, and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of the SMP and not, for example, from deed restrictions or the applicant's own actions.
- c. That the design of the project is compatible with other permitted activities within the area and with uses planned for the area under the Comprehensive Plan and SMP and will not cause adverse impacts to the shoreline environment.
- d. That the variance will not constitute a grant of special privilege not enjoyed by the other properties in the area.
- e. That the variance requested is the minimum necessary to afford relief.
- f. That the public interest will suffer no substantial detrimental effect.

Per WAC 173-27-170, for developments proposed below the OHWM or in wetlands; in addition to demonstrating the criteria described in (b) through (f), above, applicants must also show:

- a. That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes all reasonable use of the property; and
- b. That the public rights of navigation and use of the shorelines will not be adversely affected.

5.4.4 Permit Process

Application submittal: Complete applications for a substantial development permit, variance, and a conditional use permit are subject to the Type III (quasi-judicial) provisions of the Town's Integrated Project Review Ordinance (Ordinance 183). The applications will be processed pursuant to the procedures identified in this chapter.

Public Notice: For all submitted applications, the following notice procedures, per WAC 173-27-110, shall be followed:

- a. Notification of the public, the department and other agencies with jurisdiction shall be provided for substantial development, conditional use, and variance permits.
- b. Notice of application shall be provided within fourteen (14) days after the determination of completeness.
- c. An open record predecision hearing is required for conditional use permits and variance permits. The notice of application shall be provided at least fifteen (15) days prior to the hearing.

- d. Notice shall be mailed to the latest recorded real property owners within three hundred (300) feet of the property, upon which the development is proposed, plus individuals and organizations that have requested such notification, and agencies with jurisdiction.

Application Review. The Shoreline Administrator shall make decisions on shoreline exemptions, and recommendations on applications for substantial development, conditional use and variance permits based upon: (1) the policies and procedures of the SMA and related sections of the Washington Administrative Code and (2) this SMP.

Public Hearing: Pre-decision public hearings shall be held before the City Council, per subsection 4.070 (Ordinance 183).

The Planning Commission and Town Council shall make decisions based upon: (1) this SMP; (2) the policies and procedures of the SMA and related sections of the Washington Administrative Code; (3) written and oral comments from interested persons; (4) reports from the Shoreline Administrator; and (5) Section 5.4.3.

Decision: For all submitted applications, the Administrator shall provide a timely notification of the department's final decision to those interested persons having requested notification from local government pursuant to WAC [173-27-130](#). Pursuant to RCW 90.58.140(6) the Administrator shall send the final decision, including findings and conclusions to the following State agencies:

1. Washington State Department of Ecology
2. Washington State Attorney General

Department of Ecology Review of Permits: After the Town Council has approved a variance or conditional use permit, the Administrator, per WAC 173-27-200, shall file the permit with the Department for its approval, approval with conditions, or denial.

When a variance, or a conditional use permit is required for a development, the local government's ruling on the permit shall be filed simultaneously with the Department.

The Department will issue its decision on a variance or conditional use permit within thirty (30) days of filing.

Within seven (7) days upon receipt of the Department's decision, the Administrator shall notify those interested parties having requested notification of such decision.

5.4.5 Initiation of Development

Development pursuant to a substantial development permit shall not be authorized until twenty-one (21) days after the "date of filing" of the Administrator decision with the Department of Ecology;

Development for which a variance or conditional use permit is required shall not begin and shall not be authorized until twenty one (21) days after the "date of filing" of the Department of Ecology's decision with the Town Administrator; or

All appeal proceedings before the Shoreline Hearings Board have terminated.

5.4.6 Expiration of Permits

The Town may specify the length of time a shoreline permit will be effective based on the specific requirements of the development proposal. If a permit does not specify an expiration date, the following requirements apply, consistent with WAC 173-27-090:

- a. Construction, or substantial progress toward completion, must begin within two (2) years after approval of the permits.
- b. The Town may at its discretion, with prior notice to parties of record and the Department, extend the two (2) year time period for the substantial progress for a reasonable time up to one year based on factors, including the inability to expeditiously obtain other governmental permits which are required prior to the commencement of construction.
- c. If construction or construction activities have not been completed within five (5) years of approval by the Town, the Town will review the permit and, upon showing of good cause, either extend the permit for one (1) year, or terminate the permit.
- d. Prior to the Town authorizing any permit extensions, it shall notify any parties of record and the Department. Only one (1) extension is permitted.

5.4.7 Revision to Permits

A permit revision is required whenever the applicant proposes substantive changes to the design, terms or conditions of a project from that which is approved in the permit. Changes are substantive if they materially alter the project in a manner that relates to its conformance to the terms and conditions of the permit, this Master Program or the Shoreline Management Act. Changes that are not substantive in effect do not require a permit revision.

An application for a revision to a shoreline permit shall be submitted to the Administrator. The application shall include detailed plans and text describing the proposed changes. The Town shall review and process the request in accordance with the requirements of WAC 173-27-100.

If the director determines that the proposed changes are within the scope and intent of the original permit as defined in WAC 173-27-100(2) and are consistent with the shoreline master program and the Shoreline Management Act, the director may approve a revision.

If the proposed changes are not within the scope and intent of the original permit, the applicant shall apply for a new permit in the manner provided for in this chapter.

5.4.8 Rescission of Permits

A permit may be rescinded or modified upon a finding by the Town Council that the permittee has not complied with the conditions of the permit. The Town Council may initiate rescission and modification proceedings by serving written notice of noncompliance on the permittee.

Before a permit can be rescinded or modified, a public hearing shall be held by the Town Council no sooner than ten (10) days following the service of notice upon the permittee. The Town Council shall have the power to prescribe rules and regulations for the conduct of such hearings.

5.4.9 Nonconforming Use and Development

1. Nonconforming Structures

Structures that were legally established and are used for a conforming use, but which are nonconforming with regard to setbacks, buffers or yards, area, bulk, height, or density may be maintained and repaired, and may be enlarged or expanded provided that said enlargement does not increase the extent of nonconformity by further encroaching upon or extending into areas where construction or use would not be allowed for new development or uses. Such normal appurtenances are by definition located landward of the OHWM.

A structure for which a variance has been issued shall be considered a legal nonconforming structure, and the requirements of this section shall apply as they apply to preexisting nonconformities.

A structure that is being or has been utilized for a nonconforming use may be used for a different nonconforming use only upon the approval of a conditional use permit. A conditional use permit may be approved only upon a finding that:

- a. No reasonable alternative conforming use is practical;
- b. The proposed use will be at least as consistent with the policies and provisions of the Act and Master Program, and as compatible with the uses in the underlying zone as the preexisting use; and,
- c. Conditions may be attached to the permit as are deemed necessary to assure compliance with the above findings, the requirements of the Master Program and the Act, and to ensure that the use will not become a nuisance or a hazard.

Any structure nonconforming as to height or setback standards that becomes damaged more than 75% of its replacement cost of the original development may be repaired or reconstructed, provided that:

- a. The extent of the previously existing nonconformance is not increased; and
- b. The building permit application for repair or reconstruction is submitted within six (6) months of the occurrence of damage or destruction.

2. Nonconforming Uses

Uses that were legally established prior to the adoption of the Master Program and are nonconforming with regard to the use regulations of the Master Program may continue as legal nonconforming uses after adoption.

If the nonconformity is due to encroachment into the shoreline buffer, such uses shall not be enlarged or expanded waterward. They may be enlarged or expanded landward of the setback line in conformance with applicable bulk and dimensional standards by the addition of space to the main structure or by the addition of normal appurtenances as defined in WAC 173-27-040(2)(g) upon approval of a conditional use permit.

A use which is listed as a conditional use but existed prior to adoption of the Master Program or any relevant amendment, and for which a conditional use permit has not been obtained, shall be considered a legal nonconforming use.

A use which is listed as a conditional use but existed prior to the applicability of the Master Program to the site, and for which a conditional use permit has not been obtained, shall be considered a legal nonconforming use for the duration of such use.

A legal nonconforming use which remains unoccupied or unused for a continuous period of 12 months is considered abandoned and shall not thereafter be occupied or used except by a use which conforms to the regulations of the district in which the use is located.

A legal nonconforming use which remains unoccupied or unused for a continuous period of less than 12 months may be re-occupied only by the same nonconforming use or by a conforming use.

3. Nonconforming Lots

An undeveloped lot, tract, parcel, site, or division of land located landward of the OHWM which was established in accordance with Latah Subdivision Ordinance, and State subdivision requirements prior to the effective date of the Act or the applicable Master Program that does not conform to the present lot size standards may be developed if permitted by other land use regulations of the local government, as long as such development conforms to all other requirements of the applicable Master Program and the Act.

5.4.10 Local Reconsideration and Appeals

An appeal of an Administrative exemption or reconsideration of the City Council decision shall be filed with the City Council within fifteen (15) days after the notice of the decision. The process for reconsideration and appeals shall be in accordance with subsection 4.090-4.100 (Ordinance 183).

5.4.11 Appeals to State Shoreline Hearings Board

Any person aggrieved by the granting or denying of a shoreline substantial development permit, variance, or conditional use permit, the upholding of an exemption appeal, or by the rescinding of a permit pursuant to the provisions of this SMP, may seek review from the State of Washington Shorelines Hearing Board by filing a request for the same within twenty-one (21) days of receipt of the final order and by concurrently filing copies of such request with Ecology and the Attorney General's office. State Hearings Board regulations are provided in RCW 90.58.180 and Chapter 461-08 WAC. A copy of such appeal notice shall also be filed with the Town Clerk.

5.4.12 Enforcement

The Administrator is authorized to enforce the provisions of this chapter and any rules and regulations promulgated hereunder pursuant to the enforcement and penalty provisions of the Shoreline Management Act, specifically Chapter 173-27 WAC, RCW 90.58.200, 210 and 220.

This Program will be enforced by the means and procedures set forth in Section 5 of the Town of Latah Integrated Project Review Ordinance (Ordinance 183).

5.4.13 Town Record Keeping

Documentation of project review actions and changing conditions in shoreline areas. Master programs or other local permit review ordinances addressing shoreline project review shall include a mechanism for documenting all project review actions in shoreline areas. Local governments shall also identify a process for periodically evaluating the cumulative effects of authorized development on shoreline conditions. This process could involve a joint effort by local governments, state resource agencies, affected Indian tribes and other parties. [WAC 173 p 22.]

SECTION 6 - DEFINITIONS

6.1 List of Acronyms

CAO	Critical Areas Ordinance
cfs	Cubic feet per second
DNR	Washington State Department of Natural Resources
DO	Dissolved oxygen
Ecology	State of Washington Department of Ecology
EPA	Environmental Protection Agency
FEMA	Federal Emergency Management Agency
GIS	Geographical Information System
LWD	Large woody debris
MSL	Mean sea level
NRCS	Natural Resources Conservation Service
OHWM	Ordinary High Water Mark
pH	Measure of acidity or alkalinity of a solution
PCBs	Polychlorinated biphenyls
PFC	Proper functioning condition
PHS	Priority Habitat and Species
QAPP	Quality Assurance Project Plan
RCW	Revised Code of Washington
RHA	Riparian habitat areas
RM	River Mile
ROW	Right-of-Way
SCD	Spokane Conservation District
SMA	The State of Washington Shoreline Management Act
SMP	Shoreline Master Program
TMDL	Total Maximum Daily Load
USGS	United States Geological Survey
WAC	Washington Administrative Code
WDFW	Washington Department of Fish and Wildlife
WDOH	Washington Department of Health
WRIA	Water Resources Inventory Area
WSDOT	Washington State Department of Transportation
WTP	Wastewater Treatment Plant

6.2 Definitions

The Shoreline Master Program update process has its own unique vocabulary. The State of Washington has adopted the following terms through WAC 173-26-020:

"Act" means the Washington State Shoreline Management Act, RCW 90.58.

"Adoption by rule" means an official action by the department to make a local government shoreline master program effective through rule consistent with the requirements of the Administrative Procedure Act, RCW 34.05, thereby incorporating the adopted shoreline master program or amendment into the state master program.

"Agricultural activities" means agricultural uses and practices including, but not limited to: Producing, breeding, or increasing agricultural products; rotating and changing agricultural crops; allowing land used for agricultural activities to lie fallow in which it is plowed and tilled but left unseeded; allowing land used for agricultural activities to lie dormant as a result of adverse agricultural market conditions; allowing land used for agricultural activities to lie dormant because the land is enrolled in a local, state, or federal conservation program, or the land is subject to a conservation easement; conducting agricultural operations; maintaining, repairing, and replacing agricultural equipment; maintaining, repairing, and replacing agricultural facilities, provided that the replacement facility is no closer to the shoreline than the original facility; and maintaining agricultural lands under production or cultivation;

"Agricultural products" includes but is not limited to horticultural, viticultural, floricultural, vegetable, fruit, berry, grain, hops, hay, straw, turf, sod, seed, and apiary products; feed or forage for livestock; Christmas trees; hybrid cottonwood and similar hardwood trees grown as crops and harvested within twenty years of planting; and livestock including both the animals themselves and animal products including but not limited to meat, upland finfish, poultry and poultry products, and dairy products;

"Agricultural equipment" and "agricultural facilities" includes, but is not limited to: (a) The following used in agricultural operations: Equipment; machinery; constructed shelters, buildings, and ponds; fences; upland finfish rearing facilities; water diversion, withdrawal, conveyance, and use equipment and facilities including but not limited to pumps, pipes, tapes, canals, ditches, and drains; (b) corridors and facilities for transporting personnel, livestock, and equipment to, from, and within agricultural lands; (c) farm residences and associated equipment, lands, and facilities; and (d) roadside stands and on-farm markets for marketing fruit or vegetables; and

"Agricultural land" means those specific land areas on which agriculture activities are conducted as of the date of adoption of a local master program pursuant to these guidelines as evidenced by aerial photography or other documentation. After the effective date of the master program land converted to agricultural use is subject to compliance with the requirements of the master program.

"Amendment" means a revision, update, addition, deletion, and/or reenactment to an existing shoreline master program.

"Approval" means an official action by a local government legislative body agreeing to submit a proposed shoreline master program or amendments to the department for review and official action pursuant to this chapter; or an official action by the department to make a local government shoreline master program effective, thereby incorporating the approved shoreline master program or amendment into the state master program.

"Channel migration zone (CMZ)" means the area along a river within which the channel(s) can be reasonably predicted to migrate over time as a result of natural and normally occurring hydrological and related processes when considered with the characteristics of the river and its surroundings.

"Department" means the state department of ecology.

"Development regulations" means the controls placed on development or land uses by a county or city, including, but not limited to, zoning ordinances, critical areas ordinances, all portions of a shoreline master program other than goals and policies approved or adopted under chapter 90.58 RCW, planned unit development ordinances, subdivision ordinances, and binding site plan ordinances together with any amendments thereto.

"Document of record" means the most current shoreline master program officially approved or adopted by rule by the department for a given local government jurisdiction, including any changes resulting from appeals filed pursuant to RCW 90.58.190.

"Ecological functions" or "shoreline functions" means the work performed or role played by the physical, chemical, and biological processes that contribute to the maintenance of the aquatic and terrestrial environments that constitute the shoreline's natural ecosystem.

"Ecosystem-wide processes" means the suite of naturally occurring physical and geologic processes of erosion, transport, and deposition; and specific chemical processes that shape landforms within a specific shoreline ecosystem and determine both the types of habitat and the associated ecological functions.

"Feasible" means, for the purpose of this chapter, that an action, such as a development project, mitigation, or preservation requirement, meets all of the following conditions: (a) The action can be accomplished with technologies and methods that have been used in the past in similar circumstances, or studies or tests have demonstrated in similar circumstances that such approaches are currently available and likely to achieve the intended results; (b) The action provides a reasonable likelihood of achieving its intended purpose; and (c) The action does not physically preclude achieving the project's primary intended legal use. In cases where these guidelines require certain actions unless they are infeasible, the burden of proving infeasibility is on the applicant. In determining an action's infeasibility, the reviewing agency may weigh the action's relative public costs and public benefits, considered in the short- and long-term time frames.

"Fill" means the addition of soil, sand, rock, gravel, sediment, earth-retaining structure, or other material to an area waterward of the OHWM, in wetlands, or on shorelands in a manner that raises the elevation or creates dry land.

"Flood plain" is synonymous with one hundred-year floodplain and means that land area susceptible to inundation with a one percent chance of being equaled or exceeded in any given year. The limit of this area shall be based upon flood ordinance regulation maps or a reasonable method which meets the objectives of the act.

"Geotechnical report" or "geotechnical analysis" means a scientific study or evaluation conducted by a qualified expert that includes a description of the ground and surface hydrology and geology, the affected land form and its susceptibility to mass wasting, erosion, and other geologic hazards or processes, conclusions and recommendations regarding the effect of the proposed development on geologic conditions, the adequacy of the site to be developed, the impacts of the proposed development,

alternative approaches to the proposed development, and measures to mitigate potential site-specific and cumulative geological and hydrological impacts of the proposed development, including the potential adverse impacts to adjacent and down-current properties. Geotechnical reports shall conform to accepted technical standards and must be prepared by qualified professional engineers (or geologists) who have professional expertise about the regional and local shoreline geology and processes.

"Grading" means the movement or redistribution of the soil, sand, rock, gravel, sediment, or other material on a site in a manner that alters the natural contour of the land.

"Guidelines" means those standards adopted by the department to implement the policy of chapter 90.58 RCW for regulation of use of the shorelines of the state prior to adoption of master programs. Such standards shall also provide criteria for local governments and the department in developing and amending master programs.

"Local government" means any county, incorporated city or town which contains within its boundaries shorelines of the state subject to chapter 90.58 RCW.

"May" means the action is acceptable, provided it conforms to the provisions of this chapter.

"Must" means a mandate; the action is required.

"Nonwater-oriented uses" means those uses that are not water-dependent, water-related, or water-enjoyment.

"Priority habitat" means a habitat type with unique or significant value to one or more species. An area classified and mapped as priority habitat must have one or more of the following attributes:

- Comparatively high fish or wildlife density;
- Comparatively high fish or wildlife species diversity;
- Fish spawning habitat;
- Important wildlife habitat;
- Important fish or wildlife seasonal range;
- Important fish or wildlife movement corridor;
- Rearing and foraging habitat;
- Refuge habitat;
- Limited availability;
- High vulnerability to habitat alteration;
- Unique or dependent species; or
- Shellfish bed

A priority habitat may be described by a unique vegetation type or by a dominant plant species that is of primary importance to fish and wildlife (such as oak woodlands or eelgrass meadows). A priority habitat may also be described by a successional stage (such as, old growth and mature forests).

Alternatively, a priority habitat may consist of a specific habitat element (such as a consolidated marine/estuarine shoreline, talus slopes, caves, snags) of key value to fish and wildlife. A priority habitat may contain priority and/or non-priority fish and wildlife.

"Priority species" means species requiring protective measures and/or management guidelines to ensure their persistence at genetically viable population levels. Priority species are those that meet any of the criteria listed below.

Criterion 1. State-listed or state proposed species. State-listed species are those native fish and wildlife species legally designated as endangered (WAC 232-12-014), threatened (WAC 232-12-011), or sensitive

(WAC 232-12-011). State proposed species are those fish and wildlife species that will be reviewed by the department of fish and wildlife (POL-M-6001) for possible listing as endangered, threatened, or sensitive according to the process and criteria defined in WAC 232-12-297.

Criterion 2. Vulnerable aggregations. Vulnerable aggregations include those species or groups of animals susceptible to significant population declines, within a specific area or statewide, by virtue of their inclination to congregate. Examples include heron colonies, seabird concentrations, and marine mammal congregations.

Criterion 3. Species of recreational, commercial, and/or tribal importance. Native and nonnative fish, shellfish, and wildlife species of recreational or commercial importance and recognized species used for tribal ceremonial and subsistence purposes that are vulnerable to habitat loss or degradation.

Criterion 4. Species listed under the federal Endangered Species Act as either proposed, threatened, or endangered.

"Provisions" means policies, regulations, standards, guideline criteria or environment designations.

"Restore", **"Restoration"** or **"Ecological restoration"** means the reestablishment or upgrading of impaired ecological shoreline processes or functions. This may be accomplished through measures including but not limited to re-vegetation, removal of intrusive shoreline structures and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the shoreline area to aboriginal or pre-European settlement conditions.

"Shall" means a mandate; the action must be done.

"Shoreline areas" and "shoreline jurisdiction" means all "shorelines of the state" and "shorelands" as defined in RCW 90.58.030.

"Shoreline master program" or **"Master program"** means the comprehensive use plan for a described area, and the use regulations together with maps, diagrams, charts, or other descriptive material and text, a statement of desired goals, and standards developed in accordance with the policies enunciated in RCW 90.58.020. As provided in RCW 36.70A.480, the goals and policies of a shoreline master program for a county or city approved under RCW 90.58 shall be considered an element of the county or city's comprehensive plan. All other portions of the shoreline master program for a county or city adopted

under RCW 90.58, including use regulations, shall be considered a part of the county or city's development regulations.

"Shoreline modifications" means those actions that modify the physical configuration or qualities of the shoreline area, usually through the construction of a physical element such as a dike, breakwater, pier, weir, dredged basin, fill, bulkhead, or other shoreline structure. They can include other actions, such as clearing, grading, or application of chemicals.

"Should" means that the particular action is required unless there is a demonstrated, compelling reason, based on policy of the Shoreline Management Act and this chapter, against taking the action.

"Significant vegetation removal" means the removal or alteration of trees, shrubs, and/or ground cover by clearing, grading, cutting, burning, chemical means, or other activity that causes significant ecological impacts to functions provided by such vegetation. The removal of invasive or noxious weeds does not constitute significant vegetation removal. Tree pruning, not including tree topping, where it does not affect ecological functions, does not constitute significant vegetation removal.

"State master program" means the cumulative total of all shoreline master programs and amendments thereto approved or adopted by rule by the department.

"Substantially degrade" means to cause significant ecological impact.

"Water-dependent use" means a use or portion of a use which cannot exist in a location that is not adjacent to the water and which is dependent on the water by reason of the intrinsic nature of its operations.

"Water-enjoyment use" means a recreational use or other use that facilitates public access to the shoreline as a primary characteristic of the use; or a use that provides for recreational use or aesthetic enjoyment of the shoreline for a substantial number of people as a general characteristic of the use and which through location, design, and operation ensures the public's ability to enjoy the physical and aesthetic qualities of the shoreline. In order to qualify as a water-enjoyment use, the use must be open to the general public and the shoreline-oriented space within the project must be devoted to the specific aspects of the use that fosters shoreline enjoyment.

"Water-oriented use" means a use that is water-dependent, water-related, or water-enjoyment, or a combination of such uses.

"Water quality" means the physical characteristics of water within shoreline jurisdiction, including water quantity, hydrological, physical, chemical, aesthetic, recreation-related, and biological characteristics. Where used in this chapter, the term "water quantity" refers only to development and uses regulated under this chapter and affecting water quantity, such as impermeable surfaces and storm water handling practices. Water quantity, for purposes of this chapter, does not mean the withdrawal of ground water or diversion of surface water pursuant to RCW 90.03.250 through 90.03.340.

"Water-related use" means a use or portion of a use which is not intrinsically dependent on a waterfront location but whose economic viability is dependent upon a waterfront location because: (a) The use has a functional requirement for a waterfront location such as the arrival or shipment of materials by water or the need for large quantities of water; or (b) The use provides a necessary service supportive of the water-dependent uses and the proximity of the use to its customers makes its services less expensive and/or more convenient.
