Kitsap County Roads made repairs using 1-4-man rock to make repairs across from -17346 LEMOLO SHORE DR NE POULSBO WA 98370. During recent winter storm events wind wave activity eroded portions of the soils that protects Lemolo Shore Drive NE. Kitsap County Roads made repairs to the eroded portions of the road prism with 1-4-man rock and quarry spalls to stabilize the eroded area. An excavator stationed on the roadway was used to excavate a keyway up to 36 inches deep on the beach and placed toe rock for the armoring. Rock and woven geotextile fabric was placed to a height of +- 9 feet and a length of +-67 feet in length to protect the road prism. Dump trucks were stationed on the roadway to supply rock for this repair. 32 ton of 1-4-man rock was placed was used below the MHHW to make this repair. 127 ton of 1-4-man rock was place above the MHHW to make the repair. The purpose was to protect the roadway from further erosion and to ensure the safety of the traveling public at this location.

¹ If no official name for the wetland exists, create a unique name (such as "Wetland 1"). The name should be consistent with other project documents, such as a wetland delineation report.

² Ecology wetland category based on current Western Washington or Eastern Washington Wetland Rating System. Provide the wetland rating forms with the JARPA package.

³ Indicate the days, months or years the wetland will be measurably impacted by the activity. Enter "permanent" if applicable.

Check here if there are waterbodies on or adjacent to the project area. (If there are none, skip to Part 9.)

8a. Describe how the project is designed to avoid and minimize adverse impacts to the aquatic environment. [\[help\]](#)

Not applicable

Kitsap County Public Works Roads used best management practices and performed the work during low tide. WDFW proposed removing concrete from the beach. KCPW removed broken concrete from the beach. WDFW proposes placing beach nourishment, planting the road shoulder with native plants for mitigation. The beach nourishment will be placed and planting performed in 2018. A spill kit was onsite in the event of a spill. Kitsap County Public Works Roads Excavators and Dump Trucks have been retrofitted with environmentally friendly hydraulic oils.

8b. Will your project impact a waterbody or the area around a waterbody? [\[help\]](#)

Yes No

8c. Have you prepared a mitigation plan to compensate for the project's adverse impacts to non-wetland waterbodies? [\[help\]](#)

- **If Yes**, submit the plan with the JARPA package and answer 8d.
- **If No, or Not applicable**, explain below why a mitigation plan should not be required.

Yes No Not applicable

WDFW has proposed removing concrete from the beach, placing beach nourishment, amount to be determined and planting the road shoulder with native plants for mitigation.

8d. Summarize what the mitigation plan is meant to accomplish. Describe how a watershed approach was used to design the plan.

- If you already completed 7g you do not need to restate your answer here. [\[help\]](#)

The mitigation plan is to nourish the beach, provide plantings.

¹ If no official name for the waterbody exists, create a unique name (such as "Stream 1") The name should be consistent with other documents provided.

² Indicate whether the impact will occur in or adjacent to the waterbody. If adjacent, provide the distance between the impact and the waterbody and indicate whether the impact will occur within the 100-year flood plain.

³ Indicate the days, months or years the waterbody will be measurably impacted by the work. Enter "permanent" if applicable.

8f. For all activities identified in 8e, describe the source and nature of the fill material, amount (in cubic yards) you will use, and how and where it will be placed into the waterbody. [\[help\]](#)

23 cubic yards of 1-4 Man rock was used to make this repair. The material came from a Kitsap County owned quarry and provided by a local vendor. Kitsap County Public Works – Roads excavated on the beach to a depth of 36” and bury the toe rock up to 80% of its size. KCPW stacked the rock to a height of +- 9 feet to protect the road prism using 127 ton of rock. Woven fabric was placed behind the rock against the road prism to protect it from further erosion.

8g. For all excavating or dredging activities identified in 8e, describe the method for excavating or dredging, type and amount of material you will remove, and where the material will be disposed. [\[help\]](#)

No heavy equipment operated on the beach. Heavy equipment operated from the uplands road base. The base rock was buried up to 36 inches. Excavated material for placing the toe rock was placed on the beach.
