I  INSPECTION REQUIREMENTS

I.1 Inspection Plan

This section describes the method and schedule for inspection of the Low-Level Burial Grounds (LLBG) Trench 94. The purpose of inspections is to meet the requirements for landfill operations in WAC 173-303-665(4) and the general inspection requirements of Permit Condition II.X [WAC 173-303-320]. These inspections help to ensure that situations do not exist that might cause or lead to the release of waste to the environment or that might pose a threat to human health. Abnormal conditions identified by inspections must be corrected on a schedule that prevents hazards to personnel, the public, and the environment as determined by a solid waste operations supervisor. In addition to the requirements in Permit Condition II.X, the Permittees shall ensure the disposal area meet the requirements specified in WAC 173-303-665(4) described in this addendum.

I.1.1 General Inspection Requirements

The content for types of problems and frequency of inspections are described in this section and Table I.1 and Table I.2. Inspections, implemented through operating requirements, are documented on inspection checklists and log sheets.

The inspections are performed by personnel qualified to inspect LLBG Trench 94 landfill. The inspection checklists consist of a listing of items that are to be assessed during each inspection when mixed waste is being managed and after storms.

The schedule and inspection records are maintained, retained, and stored in accordance with Permit Conditions II.X.1 and II.X.3.

The inspection checklists contain the items described in Permit Condition II.X.2.

On a checklist, a yes/no/N/A response are made for each listed item. A 'yes' response means that the item is in compliance with the conditions stated on the checklist. Any problems identified during the inspection, as indicated by a 'no' response on the checklist, discrepancies are noted and are reported to the LLBG operating organization. An ‘N/A’ response means the criteria is not applicable. When the inspection is completed, the inspector prints their name, signs, and dates the inspection checklist, and sends a copy to the LLBG operating organization and files the inspection to the Hanford Facility Operating Record, LLBG Trench 94 File.

I.1.1.1 Types of Problems

LLBG Trench 94 inspections include, but are not limited to, the following:

- Condition of safety and emergency equipment
- Condition of security equipment

I.1.1.2 Frequency of Inspections

The LLBG operations organization performs an inspection of LLBG Trench 94 to ensure compliance with Permit Condition II.X [WAC 173-303-320(2)] and WAC 173-303-665(4) requirements in accordance to Table I.1. Inspection frequencies are indicated on the respective inspection checklist.

I.1.2 Schedule for Remedial Action for Problems Revealed

In accordance with Permit Condition II.X.4 [WAC 173-303-320(3)] the LLBG operating organization will remedy any problems revealed by the inspection on a schedule that prevents hazards to human health and the environment. Where a hazard is imminent or already has occurred, immediate action will be taken. Immediate actions will be implemented in accordance with the Contingency Plan as defined in Permit Conditions II.A and III.18.G.

I.1.3 Specific Process Inspection Requirements

The following sections detail the inspections to be performed at LLBG Trench 94.
I.1.3.1 Defueled Reactor Compartment Receipt Inspection

On receipt of the defueled reactor compartment in accordance with Addendum B (Waste Analysis Plan) each defueled reactor compartment for disposal is inspected by LLBG operations personnel.

Refer to Section I.1.2 on remedial actions for problems revealed. Records of inspection are maintained as described in Section I.1.1.

I.1.3.2 LLBG Trench 94 (Landfill) Inspections

LLBG Trench 94 are inspected in accordance with WAC 173-303-665(4) requirements as listed in Table I.2.

Specific items and/or problems to be noted during inspections identified in Table I-1 include the following:

- Posted warning signs.
- Portable Emergency Equipment (i.e., fire extinguishers).
- Run-on and run-off control.
- Wind dispersal control systems.

Refer to Section I.1.2 on remedial actions for problems revealed. Records of inspection are maintained as described in Section I.1.1.
