FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

CHELAN COUNTY

Wenatchee City Rotary Park **Facility Site ID# 1584748** **CSID# 836**
1410 N. Western Ave., Wenatchee

Public comment period: 6/16/11 – 7/18/11

Five-Year Review Report Available for Public Review

Ecology invites you to review and comment on a document called a periodic review for the Wenatchee City Rotary Park Site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Periodic Review Coordinator: **Jeff Newschwander**
Central Regional Office
509/ 454-7841
Jeff.Newschwander@ecy.wa.gov

- Ecology Central Regional Office Toxics Cleanup Program – 15 W. Yakima Ave., Yakima, WA 98902. (Please call 509/ 454-7658 for an appointment.)

CLALLAM COUNTY

Hoko Logging Camp **Facility Site ID# 38613568**
Hoko Ozette Road, Seiku

Public comment period: 6/3/11 – 7/5/11

Five-Year Review Report Available for Public Review

Ecology invites you to review and provide comment on a periodic (5-year) review of the Hoko Logging Camp site, a former logging base and fueling station for logging railroad locomotives. In 2001, Rayonier removed soil contaminated with heavy petroleum products. Some contaminated soil remains at the site; an environmental covenant is in place.

For public involvement information, contact Diana Smith at 360/ 407-6255 or Diana.Smith@ecy.wa.gov.

DOUGLAS COUNTY

Colorado & North River Apartments Facility Site ID# 38247947 CSID# 973
245 5th Street, East Wenatchee

Public comment period: 6/16/11 – 7/18/11

Five-Year Review Report Available for Public Review

Ecology invites you to review and comment on a document called a periodic review for the Colorado & North River Apartments site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

GRAYS HARBOR COUNTY

Hoquiam City Hall Facility Site ID# 14085
609 8th Street, Hoquiam

Public comment period: 6/20/11 – 7/20/11

Five-Year Review Report Available for Public Review

Ecology invites you to review and comment on a document called a periodic review for the Hoquiam City Hall site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment. The City of Hoquiam found gasoline contamination near underground storage tanks at the site in 1996. The city entered the voluntary cleanup program and removed underground storage tanks and contaminated soil. Some contaminated soil remains at the site under an asphalt cap. An environmental covenant is in place for the site.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Site Manager: **Mohsen Kourehdar**

ISLAND COUNTY

Oak Harbor Middle School **Facility Site ID# 92511133** **CSID# 2208**
150 SW 6th Avenue, Oak Harbor

Public comment period: 6/2/11 – 7/5/11

Five-Year Review Report Available for Public Review

Ecology invites comments on a periodic review for Oak Harbor Middle School. The Model Toxics Control Act (MTCA) requires that a periodic review be conducted every five years at cleanup sites where institutional controls were used as part of the remedy. The review is intended to evaluate site conditions and to determine whether the remedy is, or is likely to be, protective of human health and the environment. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

KING COUNTY

North Lot Development Site Facility Site ID# 1966
Southeast intersection of South King Street and Occidental Avenue South, Seattle

Public comment period: 6/17/11 – 7/18/11

Prospective Purchaser Consent Decree Available for Public Review

Ecology invites comments on the proposed Prospective Purchaser Consent Decree for the North Lot Development site. This site is about 3.85 acres owned by King County north of Qwest Field. North Lot Development plans to develop the site as part of an inter-modal regional transit hub at King Station with about 1.5 million square feet of buildable area. The development will encompass two full city blocks with residential, retail uses and two to five floors of above-ground parking. In August 2011, Ecology and North Lot Development will enter into an agreement called a Prospective Purchaser Consent Decree for the site cleanup. In the proposal, North Lot Development agrees to:

- Prepare a draft and final Remedial Investigation/Feasibility Study (RI/FS) Report. The RI/FS reports present the results of the investigation and evaluate the cleanup alternatives.
- Prepare a Draft Cleanup Action Plan (DCAP).

In 2009 the City of Seattle completed an EIS addendum that evaluated the North Lot redevelopment and the conceptual cleanup associated with the redevelopment. Based on the conceptual cleanup, the city determined that no significant unavoidable impacts are anticipated. The final cleanup action plan consists of the same actions as the conceptual cleanup evaluated by the city. Pursuant to WAC 197-11-600, Ecology finds that the city's EIS Addendum and determination provides sufficient SEPA analysis for the Consent Decree and CAP. Ecology has prepared a Public Participation Plan for the Site. The Plan describes the tools and approaches used to inform the public, request comments, and engage them in the cleanup process.

Site Manager: **Russ Olsen**
Northwest Regional Office
425/ 649-7038
Russ.Olsen@ecy.wa.gov

North Boeing Field/Georgetown Steam Plant Site Facility Site ID# 2050
7370 East Marginal Way South/6700 13th Avenue South, Seattle

Upland Site Interim Action Soil Removal Technical Reports and Work Plans Available

The Boeing Company and the City of Seattle are planning to remove contaminated soil from the North Boeing Field/Georgetown Steam Plant site this summer. The contaminated soil is a potential source of contaminants to Slip 4 of the Lower

Duwamish Waterway. Ecology recently completed review of the following technical reports and work plans associated with this work:

- Georgetown Steam Plant Technical Memorandum on Data Screening, March 25, 2011.
- Final Draft Interim Action Work Plan 2011 Fenceline Area Soil Excavation North Boeing Field Seattle, Washington, June 2, 2011.
- Georgetown Steam Plant Interim Action Work Plan, June 2, 2011.
- Georgetown Steam Plant Interim Action Technical Memorandum on Data Screening Response to Comments, June 2, 2011.
- Final Draft Interim Action Work Plan 2011 3-333 Building Soil Excavation North Boeing Field Seattle, Washington, June 9, 2011.

You may review the documents at the following locations:

- North Boeing Field/Georgetown Steam Plant: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4765>
- South Park Library – 8604 Eighth Ave. S, Seattle, WA 98108. Call 206/ 615-1688.

Park 90/5 Site

Facility Site ID# 76316149

CSID# 559

2203 Airport Way South, Seattle

Public comment period: 6/2/11 – 7/5/11

Five-Year Review Report Available for Public Review

Ecology invites comments on a periodic review for the Park 90/5 site. The Model Toxics Control Act (MTCA) requires that a periodic review be conducted every five years at cleanup sites where institutional controls were used as part of the remedy. The review is intended to evaluate site conditions and to determine whether the remedy is, or is likely to be, protective of human health and the environment. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

KITSAP COUNTY

Norseland Cleanup Site Facility Site ID# 2627

8651 State Highway 3, Port Orchard

Public comment period: 6/3/11 – 7/5/11

Periodic Review and Proposed Removal from the Hazardous Sites List

Ecology invites comments on the Periodic Review for the Norseland site and proposed removal of this site from the state's Hazardous Sites List. This site was a former mobile home park, a former landfill and former U.S. military base.

The site is entirely within the Port of Bremerton's Olympic View Business and Industrial Park. The site cleanup actions required the consolidation of waste within a designated area. The waste was covered by a permeable soil cap (minimum of 18 inches) with vegetated topsoil cover (minimum of 6 inches).

The requirements included cap maintenance, surface water control, restrictive covenants on the land, and compliance monitoring. Compliance monitoring included groundwater and ambient air monitoring. The restrictive covenants were recorded on the property deed.

Ecology has performed a periodic review for this site to confirm cleanup standards were achieved and have been maintained. The former landfill was closed consistent with regulations at the time of closure. The periodic review evaluates site conditions and monitoring data, after cleanup is considered complete. This review focuses on the post-cleanup monitoring results.

Based on the site review and monitoring results, Ecology has determined the site meets state cleanup standards. This site has completed cleanup and post-monitoring results, and it no longer represents a threat to human health or the environment.

Ecology proposes removing this site from the state's Hazardous Sites List and returning oversight to the Kitsap County Health District. The site will remain under closure permit from the Kitsap County Health District.

All requirements or conditions under any applicable solid waste regulations and the closure permit remain in effect.

Site Manager: **David L. South**

Arkema Inc. (formerly Atofina Chemicals, Elf Atochem, Pennwalt) Facility Site ID# 1220

2901 Taylor Way, Tacoma

Public comment period: 6/6/11 – 7/6/11

Agreed Order for Cleanup Available for Public Comment

The Arkema Inc. site is located at 2901 Taylor Way on the shore of the Hylebos Waterway. The Port of Tacoma bought the former chemical plant property in 2007 and began investigating contamination. The port is now planning to finish investigation and plan for cleanup. The site was formerly a chloro-alkali plant. It produced a variety of chemicals, including chlorine, sodium hydroxide, sodium chlorate, hydrochloric acid, and penite – an herbicide containing arsenic. Chemical plant activities contaminated soil and groundwater.

Rite Aid #6232 Facility Site ID# 75152667

12811 Meridian Avenue East, Puyallup

Public comment period: 6/3/11 – 7/5/11

Five-Year Review Report Available for Public Review

Ecology invites comments on a periodic (5-year) review of the Rite Aid #6232 site. Dynamite sticks were discovered at the site during the store's construction in 1998. After the Pierce County Sheriff's Department detonated and burned the dynamite, the site's owners removed soil contaminated with dinitrotoluene (DNT). Some contaminated soil remains at the site under an asphalt cap and an environmental covenant is in place.

SNOHOMISH COUNTY

Everett Shipyard Inc. site **Facility Site ID# 2794**
1016 14th Street west of West Marine Drive, Everett

Negotiations for a Consent Decree

Ecology, Port of Everett, Everett Shipyard Inc., Everett Bayside Marine Inc., and Everett Engineering Inc. are negotiating a consent decree to implement a cleanup action plan at the Everett Shipyard Inc. site.

Negotiations began on June 3, 2011, and will end on July 15, 2011. The site has arsenic, lead, antimony, copper, cPAHs, PCBs, and petroleum hydrocarbons contamination in soil; arsenic, nickel, zinc, one semi-volatile organic compound (bis[2-ethylehxy] phthalate), and diesel-range petroleum hydrocarbons in groundwater; semi-volatile organic compounds (sVOCs) including cPAHs, TBT, metals, PCBs, and petroleum-based materials in sediment.

SPOKANE COUNTY

Heglar Kronquist Site **Facility Site ID# 645** **CSID# 1135**
10 miles northeast of downtown Spokane in a rural area near the intersection of Heglar and Kronquist roads in Mead, Spokane County

Public comment period: 6/13/11 – 7/13/11

Remedial Investigation Report

The site was used as a gravel pit until it was closed in 1969. Gemini Management Inc. then began operating the site as a disposal area. From 1969 until 1974, Kaiser transported aluminum black dross from the Trentwood plant in the Spokane Valley to the disposal site. Black dross is a by-product from processing aluminum materials.

In March 2009, Kaiser Aluminum & Chemical Corporation, LLC (now known as DCO Management, LLC) and Ecology entered into an agreed order. The order required Kaiser to conduct a Remedial Investigation and Feasibility Study at the Heglar Kronquist site.

The purpose of the investigation was to find out if site-related contaminants are in groundwater on and near the site. The focus was on contaminants related to aluminum dross. Surface water and groundwater were evaluated to determine risk factors for humans, plants, aquatic, and wildlife in the site area.

Drinking water is not impacted by site-related contaminants. Surface water and groundwater, in certain areas, showed concentrations of nitrate above state standards for human health. These areas with elevated levels are not being used for drinking water.

Results of the domestic well testing done prior to the Remedial Investigation indicate properties outside of the site boundaries are not impacted by site-related contaminants. One private well was within the groundwater impact area; however, the well draws from a deep aquifer in the area and was not impacted by site-related contaminants.

The contaminants that exceeded other water quality standards are chloride, TDS, and manganese. Sodium exceeds the Environmental Protection Agency's (EPA) recommended upper limit advisory at three monitoring wells.

All concentrations of chemicals tested both on the site and at the site boundaries were below required state standards for air emissions.

Comments and questions may be submitted to:

THURSTON COUNTY

Old Brewhouse Former Paint Shop **Facility Site ID# 6029672**
3245 Boston Street Southwest, Tumwater

Public comment period: 6/6/11 – 7/6/11

Five-Year Report Review Available for Public Review

The Old Brewhouse Former Paint Shop cleanup site is located in a mixed use area in Tumwater. Olympia Brewing Company opened the brewery in 1906. It closed in 2003.

A 1997 investigation found lead and arsenic soil and groundwater contamination in the paint shop area of the former brewery. The site entered the Voluntary Cleanup Program and cleanup finished in 2002. The site was cleaned up to industrial cleanup levels, with an environmental covenant to restrict the future use of the property.

At least every five years, Ecology reviews cleanups to ensure they protect human health and the environment. The current mixed use zoning means the site can no longer use the industrial cleanup level, so the current cleanup is not protective of human health and the environment.

In April 2011, the site re-entered the Voluntary Cleanup Program. Ecology will oversee further soil cleanup that meets state cleanup levels for unrestricted land use. You may comment on the periodic review report for the Old Brewhouse Former Paint Shop. Ecology will respond to comments at the end of the comment period.

Stop N Go **Facility Site ID# 388993366**
600 East 4th Avenue, Olympia

Public comment period: 6/16/11 – 7/18/11

Five-Year Review Report Available for Public Review

The former Stop N Go property is located at 600 East 4th Avenue in Olympia. Activities at the former service station and repair shop contaminated soil and groundwater with petroleum hydrocarbons. At least every five years, Ecology reviews cleanups to ensure they protect human health and the environment. Ecology found that this cleanup is not protective. Some soil and groundwater contamination still remains. However, the current building prevents people from coming into contact with contamination. You may comment on the periodic review report for the Stop N Go site. Ecology will respond to comments at the end of the comment period.

Benedict Property **Facility Site ID# 3995580**
19223 Denmark Street SW, Rochester

Public comment period: 7/5/11 – 8/5/11

Proposed Removal from Hazardous Sites List

Ecology proposes to remove the Benedict Property from the Hazardous Sites List (HSL). The site was ranked a 5 on the HSL (a rank of "1" represents the highest level of risk compared to other sites, and a rank of "5" represents the lowest).

The site was cleaned up under the Voluntary Cleanup Program. Ecology has determined that this site does not pose a threat to human health or the environment and recommends removing the site from the HSL.

WHATCOM COUNTY

Cornwall Avenue Landfill **Facility Site ID# 2913**
Bellingham

Public comment period: 6/6/11 – 7/6/11

Proposed Interim Cleanup Available for Public Review

Ecology invites comments on a proposed interim cleanup of the Cornwall Avenue Landfill site in Bellingham. The interim action will place dredged material over a portion of the upland area of the site, contour it to redirect rainwater, and then cover it with a waterproof sheet. This will reduce the flow of contaminated groundwater to Bellingham Bay. Construction is scheduled to begin in September 2011.

The interim action is described in a proposed amendment to a 2005 legal agreement, called an agreed order, between Ecology, the Port of Bellingham and the City of Bellingham. The proposed amendment includes a detailed plan for the interim action and general language providing for potential future interim actions. Ecology hosted a public meeting on June 8 to discuss the interim action.

**Eldridge Municipal Landfill
Bellingham**

Facility Site ID# 16195

Public comment period: 6/6/11 – 7/6/11

Proposed Interim Cleanup Available for Public Review

Ecology invites comments on a proposed interim cleanup action for the Eldridge Municipal Landfill Site in Bellingham. The interim action is described in a proposed amendment to a 2010 legal agreement, called an agreed order, between Ecology and the City of Bellingham. This site is about 19,000 square feet in Little Squaticum Park in Bellingham, west of the Bellingham Technical College campus parking lot. The interim action will remove historic municipal solid waste and contaminated soils, and dispose of them at a permitted landfill. The excavated area will be backfilled with clean soil. Follow-up testing will determine if additional cleanup is needed to meet state cleanup standards. Construction is scheduled to begin in August 2011.

**Georgia-Pacific West Site
Bellingham**

Facility Site ID# 14

Public comment period: 7/5/11 – 8/3/11

Proposed Interim Cleanup Available for Public Review; Public Meeting Scheduled July 12

Ecology invites comments on a proposed interim cleanup action for the Georgia-Pacific West Site in Bellingham. The interim action will remove mercury-contaminated building materials, and soils with high levels of mercury and petroleum, from certain areas of the site and dispose of them at an approved upland landfill. Construction is scheduled to occur in phases: petroleum soils in the fall of 2011 and mercury materials and soils in the spring of 2012. A public meeting will begin at 6 p.m. July 12 in the Douglas G. Smith Conference Room, Technology Development Center, 1000 F St.

Site Manager: **Brian Sato**

NEWS & NOTES

Ecology needs wellhead elevation and groundwater level data

Starting on June 22, 2011, Ecology will roll out new templates and features to the agency’s Environmental Information Management (EIM) database.

These templates and features will allow you to enter wellhead elevation and groundwater level data into EIM. EIM can then calculate groundwater elevations across the state. They are used for a variety of purposes, including for assessing water resources and contaminated site cleanup. These new features will help Ecology to capture accurate and useful environmental data.

Groundwater “data submittal” and “search” tools have now been added. These new tools will allow you to enter wellhead elevation and groundwater level data. You will also have the capability to query and map the data.

The core issue for this new EIM database rollout is capturing water level information. Previously, Ecology has not required users to enter that information into EIM. However, in the future, if you measure a water level in a well, then Ecology would like you to enter that information into EIM. Most of this new protocol will apply to Ecology’s Toxics Cleanup Program. Per Policy 840-1, you are required to submit data (electronically) to EIM. This also applies to Voluntary Cleanup Program (VCP) sites.

If you are entering data into the EIM database, then you must now report a wellhead elevation (e.g. top of casing, etc.) in addition to horizontal (X,Y) coordinates (e.g. longitude / latitude) for all wells (“resource protection wells,” WAC 173-160-400). The wellhead elevation is needed for groundwater elevations.

Please use the North American Vertical Datum of 1988 (NAVD 88) when you report elevations. This is important because groundwater elevation data is less useful if a common vertical datum is not used. Ecology recognizes and understands that for many sites, such as gas stations, use of a site-specific or “local” datum was a common past practice. However, after June 22, 2011, you will not be allowed to enter “local” datum elevations to EIM. You must either survey to the NAVD 88 or other specified major datum.

Just to be clear, Ecology does not expect you to go back out and re-survey “old” wells. These new database EIM features and requirements are not retroactive. However, if you plan to complete and drill new wells, then please collect all relevant information, such as water depth and wellhead elevation.

If you have questions about entering data to EIM, please contact Kristin Carmack at 509/ 454-4243 or Chris Neumiller at 360/ 407-6258. If you have questions about the NAVD 88 vertical datum, please contact Charles San Juan at 360/ 407-7191.

Changes made to electronic cleanup site searches

The “Cleanup Sites – Information by County” web page has been updated to reflect an improved way of searching and retrieving information related to Washington cleanup sites.

Since the early 1980s, when major federal and state cleanup programs were created, Ecology’s Toxics Cleanup Program has identified and helped to clean up contaminated sites. The new cleanup site search tool is intended to expand search options to allow the public to search an inventory of sites currently being investigated, cleaned up, or that have already completed the cleanup process. Additional site-specific information can be obtained by clicking on links within the individual web pages.

Links to cleanup sites bookmarked using the old “Cleanup Sites – Information by County” page are no longer functional. The user will now be redirected to the “Cleanup Site Search” page: <https://fortress.wa.gov/ecy/gsp>.

Questions? Please contact Yesim Graves at 360/ 407-7185 or Yesim.Graves@ecy.wa.gov.

INDEPENDENT CLEANUPS

A property owner may conduct an independent cleanup of contamination and submit reports to Ecology.

INDEPENDENT CLEANUP CONTACTS

Central Regional Office Contact: e-mail Roger.Johnson@ecy.wa.gov or call 509/ 575-2490

Eastern Regional Office Contact: Doug Ladwig, 509/ 329-3440 or e-mail Doug.Ladwig@ecy.wa.gov

Northwest Regional Office Contact: Donna Musa, 425/ 649-7136 or e-mail Donna.Musa@ecy.wa.gov

Southwest Regional Office Contact: Kim Cross, 360/ 407-6240 or e-mail Kim.Cross@ecy.wa.gov

VOLUNTARY CLEANUP PROGRAM

A property owner cleaning up a contaminated site may enter Ecology's Voluntary Cleanup Program (VCP).

VCP CONTACTS

Central Regional Office VCP Contact: Frosti Smith, e-mail Frosti.Smith@ecy.wa.gov or call 509/ 454-7841

Eastern Regional Office VCP Contact: Patti Carter, e-mail: Patti.Carter@ecy.wa.gov or call 509/ 329-3522

Northwest Regional Office VCP Contact: Donna Musa e-mail Donna.Musa@ecy.wa.gov or call 425/ 649-7136

Southwest Regional Office VCP Contact: Kim Cross, e-mail Kim.Cross@ecy.wa.gov or call 360/ 407-6240

GLOSSARY

Agreed Order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup Action Plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment Period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent Decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering Design Report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Response Tracking System

Five-Year Periodic Review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent Cleanup Action - Any remedial action without department oversight or approval and not under an order or decree

LUST - Leaking Underground Storage Tank

NFA - No Further Action

PSI - Puget Sound Initiative

Publication Participation Plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

RCW - Revised Code of Washington

Remedial Action - Construction work done to clean up a contaminated site.

Remedial Investigation/Feasibility Study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

Responsiveness Summary - A summary of oral and/or written public comments received by Ecology during a comment period on key documents, and Ecology's responses to those comments.

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

SHA, Site Hazard Assessment - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

UST - Underground Storage Tank

UXO - Unexploded Ordnance **VCP** - Voluntary Cleanup Program

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.

Additional glossary terms may be found on the Ecology website at:

http://www.ecy.wa.gov/programs/tcp/tcp_acronym_list.htm
