FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

CHelan CoUNTy

Chelan Chevron Site  Facility Site ID# 77751227  CSID# 6660
232 East Woodin Avenue, Chelan

Negotiations Extended for Agreed Order
Ecology and Chevron Products Company are negotiating an agreed order to conduct a supplemental remedial investigation at the Chelan Chevron site.

Negotiations were scheduled to begin around September 25, 2013, and were anticipated to end around November 30, 2013. The anticipated date for negotiations has been extended for a second time, to March 25, 2014.

Please direct questions to site manager Laura Klasner.

Gold Knob Prospects Site  Facility Site ID# 22496  CSID# 11610
Circle Street and Dry Gulch Road, Wenatchee

Negotiations Underway for Agreed Order
Ecology and the City of Wenatchee are negotiating an agreed order to implement a cleanup action plan at the Gold Knob Prospects site.

Negotiations began on December 11, 2013, and were scheduled to end on February 28, 2014. They now have been extended to March 31, 2014, unless ended sooner by one or more parties.

Please direct questions to site manager Jason Shira.

GRAYS HARBOR COUNTY

Brumfield Twidwell Site
Facility Site ID# 94658144
301 East Pioneer Avenue, Montesano
CSID# 6914

Public comment period: 2/6/14 – 3/10/14

Site Proposed for Removal from Hazardous Sites List
Ecology invites the public to comment on the decision to remove the Brumfield Twidwell cleanup site from the Hazardous Sites List.

In 2005, Ecology discovered petroleum contamination in site soil and groundwater during our Montesano groundwater study. The owner removed contaminated soil and an underground storage tank. They also treated remaining contamination to naturally break down the chemicals into less toxic substances. Ecology has determined that the cleanup is complete.

Please direct questions and written comments to site manager Marv Coleman.

Site Manager: Marv Coleman

ISLAND COUNTY

Cornet Bay Marina Site
Facility Site ID# 2011
200 Cornet Bay Road, Oak Harbor
CSID# 5048

Cleanup Work Underway
Ecology contractor Glacier Environmental Services began cleanup work in December 2013 at the Cornet Bay Marina site along Deception Pass. The work is expected to last approximately five months. Construction will take place daily from 7 a.m. to 5:30 p.m. Monday through Friday and, if needed, Saturday and Sunday from 9 a.m. to 5:30 p.m. However, work is not expected on weekends at this time. The contractor will comply with Island County ordinances for construction projects, including the local noise control ordinance.

Traffic/Mariner Advisory: The traffic along Cornet Bay Road might be impacted between 7 a.m. to 5:30 p.m. Monday through Friday and, if needed, between 9 a.m. to 5:30 p.m. on Saturday and Sunday. Impact on State Route 20 is anticipated to be very minimal. Cornet Bay Marina will be accessible to boaters; however, fuel will not be available during construction.

Please direct questions to site manager Jing Liu.

<table>
<thead>
<tr>
<th>West of 4th Site</th>
<th>Facility Site ID# 47779679</th>
<th>CSID# 12260</th>
</tr>
</thead>
</table>

**Extended public comment period on draft agreed order:** 1/14/14 – 3/17/14

**Public comment period on permit modification:** 1/14/14 – 3/17/14

**Public open house held January 30, 2014, South Seattle Community College (Georgetown Campus)**

*Proposed Agreed Order and Permit Modification Available for Public Review and Comment*

The West of 4th site is located in Seattle between 4th Avenue South and the Duwamish Waterway. It extends from South Lucile Street in the north to Slip 2 of the Waterway to the south. Releases of hazardous substances at the properties of these four companies have resulted in contamination within this area:

- Art Brass Plating Inc., 5516 3rd Ave S.
- Blaser Die Casting Co., 5700 3rd Ave S.
- Burlington Environmental LLC (PSC Environmental Services), 5800 3rd Ave S.
- Capital Industries Inc., 5800 3rd Ave S.

Groundwater contamination is generally present in the area encompassed by the site. In some locations, the contamination extends as far west as the Duwamish Waterway. The contamination includes the hazardous substance trichloroethene (TCE), and substances that form in the subsurface as TCE degrades (such as dichloroethenes and vinyl chloride). There are also, at particular locations and depths, elevated levels of 1,4-dioxane and certain toxic metals (such as nickel). Groundwater is not a source of drinking water in this area.

Ecology oversees cleanup progress associated with the four potentially liable persons (PLPs) identified above. Each of these PLPs has contributed to the contamination in the site area and has been pursuing cleanup under separate Ecology orders. Individual remedial investigation (RI) reports for each of the four PLPs have been approved.

The draft “West of 4th” agreed order is a single document, issued to all four PLPs as a group. It will be a joint, or “unified,” agreed order that will govern the PLPs’ evaluation of potential cleanup actions for area-wide contamination west of 4th Ave. S. The new order will include requirements for preparing and finalizing a “West of 4th” FS report, and drafting a site cleanup action plan.

The Burlington Environmental (PSC-Georgetown) facility at 734 S. Lucile St. is a closed RCRA hazardous/dangerous waste treatment and storage facility. The facility’s non-operating permit currently references a 2010 agreed order, which includes requirements for implementing a cleanup action plan in the eastern portion of the company’s Georgetown site. Groundwater contamination due to releases from Burlington Environmental’s facility that has migrated west of 4th Ave. S. is proposed to be addressed in the new “West of 4th” agreed order discussed above.

After the new order is finalized, Burlington Environmental’s cleanup obligations will be set out in two orders: (1) the 2010 order, which focuses primarily on site contamination east of 4th Ave. S., and (2) the new multi-party order, which focuses on site contamination west of 4th Ave. S. Therefore, Burlington Environmental’s permit must be modified to refer to both of these orders and PSC has requested such a modification.

The new draft agreed Order and Burlington Environmental permit modification request are limited to post-RI, FS activities. None of these activities are likely to lead to a “probable significant adverse environmental impact” under SEPA. Ecology invites the public to read and comment on the proposed documents (the draft order and Burlington Environmental’s proposed permit modification).

Ecology held an open house for the public on January 30, 2014, at the Georgetown Campus of South Seattle Community College.

After considering all of the public’s comments, Ecology will either make a final decision or make a new tentative decision on the draft order. At the end of the 60-day permit modification comment period, Ecology intends to prepare a draft permit for public review. The draft permit will reflect our consideration of any comments we have received and the need to reference both cleanup
orders in the Burlington Environmental permit.

---

**Troy Laundry Site**  
**Facility Site ID# 19135499**  
307 Fairview Avenue North, Seattle

*Interim Cleanup Action Scheduled to Begin*

Starting in March 2014, Touchstone SLU LLC (Touchstone) will begin removing and reducing soil and groundwater contamination found at its Troy Laundry property.

This approved interim (partial) cleanup action is expected to be completed in 2015. The interim action is being carried out through an amendment to the legal agreement called an agreed order between Ecology and Touchstone. An interim action is taken when it is technically necessary to reduce a threat to human health or the environment.

The agreed order requires Touchstone to complete the interim action, the remedial investigation (RI) and feasibility study (FS) to investigate the full contamination at the site and evaluate cleanup options. The cleanup under the interim action is not the final cleanup remedy for this site and only addresses a portion of the site.

Please direct questions to site manager Maura O’Brien.

**Northlake Shipyard Site**  
**Facility Site ID# 23849623**  
1441 North Northlake Way, Seattle

*Cleanup Work in Progress at Northlake Shipyard*

Ecology has started cleanup work at the Northlake Shipyard site at 1441 North Northlake Way, Seattle. Ecology’s contractor, Redside Construction, will remove arsenic-contaminated sandblast grit from the sediments around the piers. The work began in early December and is expected to last for about three months.

The cleanup work will take place from 6 a.m. to 10 p.m. Monday through Friday and if needed on Saturday and Sunday between 9 a.m. to 10 p.m. The contractor will comply with the City of Seattle’s noise ordinance.
Traffic/Mariner advisory: Expect traffic delays along North Northlake Way between 6 a.m. to 10 p.m. Monday through Friday and possibly on Saturday and Sunday between 9 a.m. to 10 p.m. Mariners are requested to use caution when motoring near the area.

This work is being done under a prospective purchaser consent decree between Ecology and Northlake Shipyard Inc. (Northlake) to clean up arsenic-contaminated sandblast grit that was at the site prior to Northlake purchasing the property. The work will involve:

- Dredging about 8,000 cubic yards of sediment from around the western pier and beneath the dry docks. This will remove the top two feet of sediment.
- After dredging, six inches of clean sand will be placed over the area that was dredged.
- A silt curtain or sediment barrier (extending from the surface to the lake bottom) will be set up around the work area to contain sediment that is disturbed during the dredging. Water quality measurements will be taken outside of the silt curtain to confirm that the work does not result in excessive turbidity or cloudiness in the water.
- Every two to three days, trucks will remove the dredged material from the site and take it to a permitted landfill. This will result in an additional 20 to 30 trucks using North Northlake Way.

KITSAP COUNTY

Hansville General Store Site
7532 Twin NE Spits Road, Hansville
Facility Site ID# 2621
CSID# 5166

Amended Consent Decree Dismissed

Ecology and the liable party entered into a consent decree in 1992, which was later superseded by an amended consent decree in 2010. The amended consent decree required cleanup of the Hansville General Store site at 7532 Twin NE Spits Road in Hansville.

Prior to 1934, the facility operated as a farmer’s store. Between 1934 and 1988, operations expanded to include gasoline dispensing. In 1988, the gasoline dispensers were shut down.

In 2010-2011, Ecology conducted the cleanup using Federal American Recovery and Reinvestment Act funding. The amended consent decree was subsequently deemed satisfied, and the court took final action dismissing the amended consent decree on February 6, 2014. Relevant documents available on Ecology’s website include a joint motion to dismiss and an order for dismissal.

### Klickitat County

**Columbia Gorge Aluminum Site**  
85 John Day Dam Road, Goldendale

**Negotiations in Progress for Agreed Order**  
Ecology is negotiating an agreed order with Lockheed Martin Corporation and NSC Smelter LLC, the potentially liable parties, to complete the remedial investigation and feasibility study for the Columbia Gorge Aluminum site.

The Columbia George Aluminum Smelter produced aluminum and aluminum products for nearly 30 years. The smelter is located in Goldendale on about 350 acres along the Columbia River. During the operation of the smelter, the various owners have managed hazardous and solid waste at several locations on the site. Smelter operations contaminated soil and groundwater at the site with fluoride, PAHs, cyanide, and PCBs. The facility was added to the Hazardous Sites List in 1990.

### Okanogan County

**Arden’s Store Site**  
1458 Old Highway 97, Malott

**Public comment period:** 2/20/14 – 3/24/14

**Second Periodic Review Draft Report Available for Public Review and Comment**  
Ecology invites you to review and comment on a document called a periodic review for the Arden’s Store site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made. Please direct questions and comments to periodic review coordinator Jeff Newschwander.

**Periodic Review Coordinator:** Jeff Newschwander

PIERCE COUNTY

Tacoma Silver Cloud Inn Site  
2317 Ruston Way, Tacoma  

Facility Site ID# 33787658  
CSID# 1037

Public comment period: 2/6/14 – 3/10/14

Site Proposed for Removal from Hazardous Sites List

Ecology invites the public to comment on the decision to remove the Tacoma Silver Cloud Inn cleanup site from the Hazardous Sites List.

While developing the site, Silver Cloud found that soil and groundwater were contaminated with petroleum hydrocarbons. They also found mercury and a semi-volatile organic compound in sediments near the shore. Silver Cloud removed underground storage tanks, debris, contaminated soil, and contaminated sediments. Ecology has determined that the cleanup is complete.

Please direct questions and comments to site manager Marv Coleman.

Site Manager:  
Marv Coleman  
Southwest Regional Office

Former Freeway View / Former Airspares Building Site  
2617 East L Street, Tacoma  

Facility Site ID# 36399481  
CSID# 5946

Public comment period: 2/6/14 – 3/10/14

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a periodic review of the Former Freeway View/Former Airspares site in Tacoma. Ecology reviews cleanup sites at least every five years to make sure they still protect human health and the environment. In the past, three underground storage tanks were used on site to store gasoline, diesel, and waste oil. Studies found soil contaminated with total petroleum hydrocarbon (TPH) around the pit for the waste oil tank.

The site was cleaned up by removing all three underground storage tanks and 176 cubic yards of contaminated soils. An environmental covenant is in place that prohibits activities that could cause the release of contaminants contained as part of the cleanup. Cleanup actions at this site appear to be protective.

Please direct questions and comments to site manager Panjini Balaraju.

Tacoma Redevelopment Properties Site  Facility Site ID# 1263  CSID# 3677
1933 Dock Street, Tacoma

Public comment period: 2/20/14 – 3/24/14

Amended Consent Decree Available for Public Review and Comment
Ecology invites the public to review and comment on the thirteenth amendment to the Tacoma Redevelopment Properties consent decree. A consent decree is a legal agreement between Ecology and one or more potentially liable person (PLP).

The amendment adds a new PLP, Henry Foss Group LLC, to the existing agreement between Ecology, the City of Tacoma, and the Thea Foss Waterway Development Authority. The amendment is for the site located at 1933 Dock Street, Tacoma (also called Site 1).

The consent decree covers cleanup activities next to the Thea Foss Waterway. Decades of commercial and industrial activity contaminated the area with petroleum hydrocarbons, solvents, and metals.

Please direct questions and comments to site manager Marv Coleman.

Site Manager:  Marv Coleman

SNOHOMISH COUNTY

Everett Landfill Tire Fire Site  Facility Site ID# 2696  CSID# 3862
2900 36th Street, Everett

Public comment period: 2/20/14 – 3/24/14

Periodic Review Draft Report Available for Public Review and Comment
Ecology invites you to review and comment on a document called a periodic review for the Everett Landfill Tire Fire site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.
The triangular-shaped site is approximately 70 acres in size, and is generally bounded by 36th Street to the north, Burlington Northern Sante Fe (BNSF) railroad tracks to the west and to the east. Wetlands and the Snohomish River are east of the site.

After over 50 years of operation, the Everett Landfill stopped accepting waste in 1974 and was closed the following year under the then current regulations WAC 173-304. In 1977, a commercial recycling operation began storing and handling old rubber tires on portions of the site. In 1983 and 1984, two separate fires occurred in the tire piles.

In 1989, the site was listed under MTCA and ranked 1 out of 5 on the priority list for cleanup, with a ranking of 1 being the highest priority for cleanup.

The City of Everett conducted interim cleanup actions in 1995 and 1997-1998. These actions re-graded the site to allow the collection of surface water and to reduce the generation of leachate (groundwater within landfilled materials), installed the leachate collection system, prevented leachate seeps into surface water bodies, removed remaining tires, and disposed of and capped tire fire ash on-site.

Ecology and the City then entered into negotiation of a formal cleanup action plan (CAP) and consent decree to finalize administrative requirements for cleanup. In 2001, a State Environmental Policy Act (SEPA) review was conducted and a final Determination of Non-Significance (DNS) was issued for the site, which required any future development to be constructed following the performance standards in the cleanup action plan. Then a final consent decree was entered and filed in Snohomish County Superior Court for implementation of the cleanup action plan.

The consent decree and cleanup action plan required the City to conduct certain cleanup actions to prevent environmental exposure to contaminants under then-existing conditions at the site. Those actions were:

• Installation of new landfill gas monitoring probes around the perimeter of the site to detect possible off-site migration.
• Continued operation of the leachate collection system and maintenance of surface grading.
• Maintenance of the clean soil cover and site fencing to prevent unauthorized access.
• Development and implementation of a stormwater pollution prevention plan for the entire site.
• Compliance monitoring of groundwater, surface water, and direct contact.
• Active gas control.

The City has conducted these actions. Some are ongoing, such as the operation and maintenance of the leachate and gas collection systems, continued monitoring of landfill gas and groundwater, and inspection and maintenance of the landfill cover.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct technical questions to periodic review coordinator Eugene Freeman.

Crystal Cleaners Lynnwood Site  
Facility Site ID# 32839377  
CSID# 4572  
3609 164th Street Southwest, Lynnwood

Public comment period: 3/6/14 – 4/5/14

Periodic Review Draft Report Available for Public Review and Comment

Ecology invites you to review and provide comment on a document called a periodic review for Crystal Cleaners Lynnwood. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

The Crystal Cleaners Lynnwood Site is located at 3609 164th St. SW, Lynnwood. As of 2009, Crystal Cleaners was an operating dry cleaner facility located in a small strip mall containing a gas station, mini-mart and restaurant. As of 2013, Crystal Cleaners was still an operating dry cleaner facility located in a small strip mall containing a gas station, nail salon and restaurant.

The contaminant of concern at this site is tetrachloroethylene (PCE) associated with dry cleaning activities at the property. PCE contamination in excess of the state cleanup standards was observed in soil samples collected at the site, ranging in depths from 6 inches to 4.5 feet. Concentrations ranged from 100 part per million (ppm) to 180 ppm. Soil samples collected deeper than 4.5 feet did not contain appreciable quantities of contamination. Groundwater beneath the site is deeper than 100 feet and therefore, was not expected to be impacted by the release from this property.

Based upon the Snohomish County Groundwater Characterization Study conducted in 1991, which reported depth to groundwater at the site is greater than 100 feet bgs and because contamination was not found at significant levels below a depth of 4.5 feet, this contamination does not likely pose a threat to groundwater. Due to the structure, concrete foundation, and asphalt parking lot present over the contaminated material, it does not likely pose a threat to human health or the environment by direct contact, inhalation or ingestion. No remedial action was taken at this site.
Public Comment Period for an Interim Action

Ecology is proposing to complete an interim cleanup action in the Lowlands area of the Everett Smelter cleanup site. Ecology will dig up and possibly remove a small area of soil below East Marine View Drive at the interchange of East Marine View Drive and Highway 529. This work will allow Ecology to confirm the presence of a source of arsenic groundwater contamination and remove source material. The interim action scope of work is available for public review and comment.

Historic smelter operations resulted in soil and groundwater contamination in the cleanup area. In the Uplands (western side of the site) the primary contamination was arsenic in soil. Cleanup in this area is already underway. Investigations in the Lowlands revealed an area of arsenic contaminated groundwater in the lower aquifer above state cleanup levels. Arsenic was also found above state cleanup levels in soil in several areas of the Lowlands.

A public meeting will be held on March 11 from 6:30 to 8:30 p.m. in the Snohomish County PUD Auditorium, 2320 California St., Everett.

Second Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for the Broadway Truck Stop site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment. This is the second periodic review for the site.

In the early 1960s, the site was developed as a commercial gasoline service station. The facility underwent at least one renovation to enlarge the building into a truck stop operation. The facility included a restaurant, large truck refueling islands, vehicle maintenance area, truck wash area, and a wastewater disposal system. The facility lies over the Spokane Valley Rathdrum-Prairie Aquifer.

The wastewater disposal system consisted of an underground cesspool structure connected to floor drains and sumps located within an adjacent vehicle maintenance area in the truck stop building. The cesspool consisted of an underground perforated concrete structure that discharged through drain rock to surrounding soils. The structure was similar to a stormwater drywell design.

Historically, spilled petroleum products such as used oils, diesel fuel, solvents; floor wash wastewaters, and wastewaters from the former truck wash area accumulated in the system.

Soil sampling conducted in 1997 near the wastewater disposal system showed total petroleum hydrocarbons (TPH), polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs) and cadmium at levels that exceeded state standards. A second waste water disposal system was discovered during excavation. Approximately 1,100 tons of affected soil were removed from the site. The majority of contaminated soils were removed from both disposal system areas.

Soils with TPH, PAHs and cadmium concentrations that exceed state standards remain near the second waste disposal system. The majority of residual contamination is located deeper than 12 feet below the ground surface. A restrictive covenant was placed on the site in April 1999 to limit how the site may be used. The depth of contamination and the impermeable surface, combined with the property use limitations in the restrictive covenant effectively eliminate the direct contact exposure pathway.

Groundwater is located at approximately 60 feet below the ground surface; approximately 38 feet below the maximum detected extent of contamination. The impermeable surface of the site prevents storm water infiltration and leaching. The removal of the wastewater infiltration system prevents re-contamination of site soils. Contamination remaining at the site does not appear to pose a threat to groundwater quality.

Based on the October 11, 2013, site visit, the building and asphalt cover continue to eliminate direct exposure pathways (ingestion and physical contact) to contaminated soils. The asphalt appears in satisfactory condition and no repair, maintenance, or contingency actions have been required. The site continues to operate as a retail fueling facility.

No additional remedial actions are needed based on the following:

• The remaining contamination is present at relatively low concentrations.

• Contamination is contained below an asphalt surface.

• There is no apparent threat to groundwater.

• Institutional controls remain in effect at the site.
Ecology will review all comments received during the comment period and make recommendations for suggested changes. If no significant changes are made, the periodic review will become final. If significant changes are made, an additional public comment period will be held.

Please direct questions and written comments to site manager Patti Carter.

Remedial Investigation Report Available for Public Review and Comment
Ecology entered into an agreed order with Vaagen Brothers Lumber Co. Inc. The order required Vaagen to give Ecology access to property that lies within the Van Stone Mine site so a Remedial Investigation and Feasibility Study could be conducted.

The potentially liable persons for this site are American Smelting and Refining Company (Asarco), Callahan Mining Corp., Sundown Holdings Ltd., Equinox Resources (Wash) Inc., and Vaagen Brothers. Site contamination is a result of past mining operations. Lead and zinc mining explorations began as early as 1926 at the site and stopped in 1993.

The Remedial Investigation Report provides detailed findings of the nature and extent of site-related contamination in five main areas. It evaluates surface water, groundwater, soil, and sediment as they relate to human health and ecological risks. It evaluates whether contaminant levels exceed state standards or not. The report also includes historical data, climate, habitat, various species, geologic and topographic information about the site.

Additional evaluations were made based on public concerns about the Van Stone Mine Road, Lotze Creek Road and potential impacts to outlying areas from wind blowing contaminants during summer months.

The five main areas studied were 1) the open pits, mill, and waste rock area; 2) upper tailings pile area; 3) lower tailings pile area; 4) pipeline and access roads; and 5) Onion Creek and tributaries.

Surface water met state standards for human health in all five areas studied. Six groundwater monitoring wells and seven residential wells were sampled. One residential well had elevated levels of arsenic and the property owner was notified.

Copper and mercury met soil state standards in all five areas. Chromium and nickel exceeded soil standards in the lower tailings pile area. Zinc exceeded soil standards in the open pits, mill, and waste rock area. Arsenic exceeded soil and sediment standards in all five areas. Lead and cadmium exceeded soil and sediment standards in all areas except Onion Creek and the tributaries.

The Feasibility Study Report will be available for comment in the summer of 2014.

### WHATCOM COUNTY

**Georgia-Pacific West Site**  
Bellingham

*Negotiations Underway for Consent Decree*

Ecology and the Port of Bellingham are negotiating a consent decree for the cleanup of the Pulp & Tissue Mill Area of the GP-West cleanup site. When final, the document will direct the cleanup in this area of the site.

Negotiations began in February 2014 and are anticipated to conclude in June 2014. Once completed, the draft consent decree will be presented to the public for review and comment.

Please direct questions to site manager Brian Sato.

For more information:

### WHITMAN COUNTY

**North Colfax Petroleum Contamination Site**  
East side of North Main Street at intersection of East Tyler and East Harrison Streets, Colfax

*Negotiations Beginning for Consent Decree*

Ecology plans to begin negotiations for a consent decree with the potentially liable persons (PLPs) for the North Colfax Petroleum Contamination site on March 12, 2014. The PLPs include Convenience Retailers LLC; PetroSun West LLC; Bedrock Oil Inc.; TOC Holding Co.; Four Star Supply Inc.; and CHS Inc. Negotiations are anticipated to be completed in sixty days.

The consent decree is a draft document until public comment has been considered and modifications made, if appropriate. The decree is a legal document that formalizes the agreement between Ecology and the PLPs. It is used to implement work described in the Cleanup Action Plan, which previously went through public comment.

The decree also assures work is conducted in a timely manner, in accordance with state cleanup regulations, and that all other applicable laws and regulations are met.
The North Colfax Petroleum Contamination site is approximately 1,000 feet south of the Palouse River and east of the South Fork of the Palouse River. The site is made up of three main properties: the Colfax Grange property at 105 E. Harrison; the Cenex property bordered on the north by East Tyler, to the west by North Main Street, to the south by the railroad tracks and to the east by an unopened City of Colfax right-of-way; and the PetroSun/Time Oil property located at 804 N. Main.

The site includes several parcels, currently or previously occupied by gasoline stations. Petroleum leaks from operations at the site contaminated soil and groundwater requiring further investigations and development of cleanup options. Cleanup options have been chosen and the consent decree will implement the work.

Second Periodic Review Draft Report Available for Public Review and Comment
Ecology invites you to review and comment on a document called a periodic review for the Sunset Ridge site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and written comments to periodic review coordinator Jeff Newschwander.

Glossary

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State’s cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

LUST - Leaking Underground Storage Tank

NFA - No Further Action
Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

Responsiveness summary - A summary of oral and/or written public comments received by Ecology during a comment period on key documents, and Ecology's responses to those comments.

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

UST - Underground Storage Tank

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state’s cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.
