FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

CLARK COUNTY

Astro Western Station 607 Site Facility Site ID# 69431927 CSID# 6528
13117 NE Highway 99, Vancouver

Public comment period: 8/21/14 – 9/22/14

Proposed Removal of Environmental Covenant and Draft Periodic Review Report
Ecology invites the public to comment on the decision to remove an environmental covenant from the Astro Western Station 607 cleanup site. A draft periodic review report is also available for review and comment.

Past activities polluted the site with gasoline-range petroleum hydrocarbons (TPH-G) in soil, and 1,2 Dichloroethane and benzene in groundwater. In 1996, the property owner cleaned up the site by removing soil and polluted groundwater.

Cleanup actions left about 11 cubic yards of contaminated soil in place. An environmental covenant was recorded for the site in 2009.

Based on a periodic review of the site, Ecology proposes removing the environmental covenant from the property because of the depth of remaining soil contamination, contamination is not present in groundwater, and current site conditions now meet a new TPH-G soil cleanup level.

Please direct questions to site manager Panjini Balaraju.

Site Manager: **Panjini Balaraju**
Southwest Regional Office
360/ 407-6335
Panjini.Balaraju@ecy.wa.gov

FRANKLIN COUNTY

Pasco High School Site
1108 North 10th Avenue, Pasco

Facility Site ID# 14758414

CSID# 353

Public comment period: 9/15/14 – 10/14/14

Periodic Review Available for Public Review and Comment

Ecology invites you to comment on a periodic review of the Pasco School District No. 1 High School site at 1108 N. 10th Ave. in Pasco. Petroleum-contaminated soil was found during removal of a tank that held heating oil for the school buildings. Cleanup actions were conducted to remove the contaminated soil. Ecology continues to monitor the effectiveness of the cleanup actions and developed a report called a periodic review.

Some contaminated soil remains because it was located about 25 feet under the ground, and removing the soil could impact building structures. Groundwater was not impacted. An environmental covenant was placed on the property to limit how it may be used and to further protect the completed cleanup work.

The periodic review contains information about the site, the cleanup that was conducted, and the results of the monitoring conducted since cleanup began.

Please direct questions and written comments to site manager Patti Carter.

Site Manager: **Patti Carter**
Eastern Regional Office
509/ 329-3522

GRANT COUNTY

Cenex Bulk Plant Harvest States Moses Lake Site
1015 East Broadway, Moses Lake

Facility Site ID# 607

CSID# 1913

Public comment period: 9/9/14 – 10/8/14

Site Proposed for Removal from Hazardous Sites List

Ecology is accepting comments about the proposed removal of the Cenex Bulk Plant Harvest States Moses Lake site from the Hazardous Sites List. The list contains contaminated sites that have been evaluated and ranked. A rank of 1 indicates the greatest potential threat to human health and the environment and 5 the least potential threat. This site ranked a 2 based on petroleum contamination in soil and groundwater.

The site is currently used as a bulk fuel and lubricant facility. It includes above-ground storage tanks, product piping and fuel dispensers for retail sale. A warehouse on-site is used to store drums of bulk lubricating products.

Several steps have been taken to clean up soil and groundwater contamination. Cleanup criterion has been met over an extended period of monitoring since 1991, and Ecology now proposes removing the site from the Hazardous Sites List.

Please direct questions and written comments to site manager Patti Carter.

Camp Korey at Carnation Farm Site **Facility Site ID# 89166326** **CSID# 6821**
28901 NE Carnation Farm Road, Carnation

Public comment period: 9/5/14 – 10/6/14

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for a portion of the Camp Korey at Carnation Farm site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as

required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and comments to periodic review coordinator Eugene Freeman.

Pacific Car & Foundry Co. Site
1400 North 4th Street, Renton

Facility Site ID# 2065

CSID# 788

Public comment period: 9/19/14 – 10/20/14

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for a portion of the Pacific Car & Foundry Co. site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act (MTCA).

Significant changes to the periodic review include reduction of the number of groundwater monitoring wells required in the next review. Rationale for removal of selected compliance monitoring wells is based on reported contamination below MTCA cleanup at locations and the property boundary for multiple years.

The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and comments to periodic review coordinator Eugene Freeman.

KITSAP COUNTY

Crownhill Elementary School Site
1500 Rocky Point, Bremerton

Facility Site ID# 99722456

CSID# 4487

Public comment period: 9/26/14 – 10/27/14

Draft Agreed Order, Other Documents Available for Public Review and Comment

Ecology invites the public to review and comment on a draft legal agreement called an agreed order between Ecology and the Bremerton School District for the Crownhill Elementary School site at 1500 Rocky Point in Bremerton. The boundaries of the site extend south onto the northern section of Bremerton United Methodist Church.

Under the agreed order, the Bremerton School District agrees to clean up contamination at the site. The school district will:

- Implement the final cleanup action plan

- Develop the remedial design and cleanup action scope of work.
- Develop and implement the groundwater monitoring and contingency plan.
- Develop and implement a cover system inspection and maintenance plan.
- Provide quarterly progress reports to Ecology.

A restrictive covenant will be placed on the appropriate portions of the site. The school will also prohibit drinking water well installation or activities that could disturb the cover or expose the landfill wastes.

• Ecology seeks your input on the following documents:

- Draft Agreed Order
- Draft Remedial Investigation/Feasibility Study
- Draft Cleanup Action Plan
- Updated Public Participation Plan

Please direct questions and comments to site manager Libby Goldstein.

SKAGIT COUNTY

Anacortes Port Log Yard Site
718 4th Street, Anacortes

Facility Site ID# 21898438

CSID# 3604

Public comment period: 9/8/14 – 10/7/14

Draft Agreed Order, Draft Public Participation Plan Available for Public Review and Comment

Ecology invites you to review and comment on the draft agreed order and the draft public participation plan for the Anacortes Port Log Yard site. The site is generally located at 718 4th St. in Anacortes. The agreed order is a legal document between Ecology and the Port of Anacortes in which the port agrees to provide remedial action at the site where there has been a release or threatened release of hazardous substances. The public participation plan describes how the public can provide input on the cleanup of the site.

The site is owned by the port and was historically used for log handling from the mid-1960s to about 2004. Operations included log rafting and the transfer of logs from water to upland sorting and handling areas on Pier 2. From 1978 to 1979, the port leased the area to Forest Sales Inc. for similar uses. Following the closure of the facility in 2004, the port led an investigation to assess potential impacts from decades of log handling activities. The investigation found surface sediments containing up to 75 percent wood debris by volume within a matrix of silt and fine sand.

Further investigations from 2008 to 2010 found that sediment samples failed to meet Ecology's regulatory levels: the Sediment Cleanup Objective and Cleanup Screening Levels criteria for benthic invertebrate community health (i.e., living in or near marine sediments). These investigations also indicated the site may contain dioxins/furans at levels that exceed human health risk based sediment cleanup levels.

Please direct questions and written comments to site manager Susannah Edwards.

Former Shell Tank Farm Site

Facility Site ID# 4781157

CSID# 4846

Between 13th and 14th Streets east of Commercial Avenue, Anacortes

Consent Decree Filed in Court; Remedial Site Excavation Begins This Fall

Ecology expects remedial excavation work to begin in late October at the Former Shell Oil Tank Farm, located between 13th and 14th streets east of Commercial Avenue. The site was originally a portion of the Fidalgo Bay tide flats, which were filled to the current grade between 1925 and 1929. The property was acquired by the Port of Anacortes in 1929 and subsequently leased to the Shell Oil Company in 1930 for use as a bulk fuel storage and distribution facility. The facility primarily handled gasoline and diesel range fuels until it was decommissioned in 1987 and all tanks, piping, and structures were removed.

The consent decree between and the port recently was filed in Skagit County Superior Court. In addition, the engineering design report for the remedial excavation work has been approved.

Starting in November 2014, as part of the Puget Sound Initiative, Ecology and the port will be completing a remedial excavation to remove approximately 4,000 cubic yards of contaminated soil within the readily accessible portion of the site. Confirmation soil samples will be collected during the excavation activities to verify the successful removal of contamination. During backfilling activities, an oxygen releasing material will be placed at the extents of the excavation to stimulate naturally occurring microbes to enhance biological degradation of organic contaminants potentially remaining in place beneath the sidewalk and asphalt surfaces of 14th Street and the Q Avenue. Excavated areas of the site will backfilled with imported clean soil.

Following the remedial excavation activities the port will monitor groundwater to confirm that concentrations of petroleum hydrocarbons, carcinogenic polycyclic aromatic hydrocarbons, benzene, and cadmium do not exceed groundwater cleanup levels.

SNOHOMISH COUNTY

Northwest Pipeline Snohomish MS Site
13931 SR2, Monroe

Facility Site ID# 2778

CSID# 4542

Public comment period: 9/5/14 – 10/6/14

Site Proposed for Removal from Hazardous Sites List

Ecology proposes to remove the Northwest Pipeline Snohomish MS site from the Hazardous Sites List. The site is located at 13931 SR2 in Monroe.

This site was ranked a 5 and placed on the Hazardous Sites List (HSL). The HSL is a record of contaminated sites throughout the state that are ranked on a scale of 1 to 5. One represents the greatest potential threat to human health and the environment relative to all sites ranked; 5 represents the least potential threat. Ecology’s Voluntary Cleanup Program reviewed cleanup actions at the site and is recommending removal of this site from the HSL.

This facility consists of a natural gas line meter station and associated heater within a fenced and locked enclosure area. The primary source of contamination at the site was accidental spillage of mercury at a meter station which occurred during the historic maintenance and calibration of mercury containing differential pressure meters. The mercury releases only impacted soil at the site. It was determined that groundwater was not impacted by the contamination from the facility.

A total of 148.5 tons of contaminated soil, all junk vehicles, containers, fuel tanks, drums and solid wastes were removed from the property and taken to a permitted facility.

Site Proposed for Removal from Hazardous Sites List

Ecology proposes to remove Dunkin Diesel Service site from the state’s Hazardous Sites List. The site is generally located at 3219 Bickford Ave. in Snohomish.

This site was ranked a 5 and placed on the Hazardous Sites List (HSL). The HSL is a record of contaminated sites throughout the state that are ranked on a scale of 1 to 5. One represents the greatest potential threat to human health and the environment relative to

all sites ranked; 5 represents the least potential threat. Ecology's Voluntary Cleanup Program reviewed cleanup actions at the site and is recommending removal of this site from the HSL.

From December 1989 to June 2013, various cleanups efforts were conducted at the site. Ecology determined that the selected cleanup action was removal of the former underground storage tank and excavation and appropriate disposal off-site of all the exceeding contaminated soil. There were a total of nine excavations at the site which included excavations of underground storage tanks and areas of contaminated soil.

Confirmation samples for laboratory analysis were collected at the excavation boundaries and bottoms. The results determined that the contaminants concentrations were below state cleanup levels after completion of the cleanup effort in 2013. A groundwater sample was also collected at the former underground storage tank excavation, which determined that groundwater quality had not been impacted by petroleum or metals.

SPOKANE COUNTY

Washington Water Power Central Steam Plant Site
South Lincoln Street and West First Avenue, Spokane

Facility Site ID# 682

CSID# 726

Public comment period: 9/18/14 – 10/17/14

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for the Washington Water Power Central Steam Plant site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment. The review discusses the effectiveness of the cleanup actions as well as monitoring results. This is the second periodic review conducted for the site.

The site is located in a commercial area currently occupied by retail stores, restaurants, hotels, and commercial parking lots. Steam Plant Square, Diamond Parking Lot, Davenport Parking Garage, and the Rodeway Inn cover the majority of the petroleum hydrocarbon impacted soils.

The Central Steam Plant site was built in 1915 to burn coal and produce steam and electric power. In the mid-1960s the boilers were converted to use petroleum products (Bunker C). Seven underground storage tanks were constructed to store fuel. The site is currently used for retail stores, restaurants, hotels, and commercial parking lots.

A petroleum release occurred in 1982. Investigations were conducted to determine how much petroleum was released and where it was located. Results indicated petroleum product was present in soil and shallow groundwater. The site groundwater is not a source of drinking water and is not connected to the Spokane Valley-Rathdrum Prairie Aquifer.

Cleanup actions eliminated human exposure to site-related contaminated soils and groundwater. Removal of underground storage

tanks along with shallow excavation conducted during the initial cleanup protects human health and the environment. The exposure pathways to contaminated soils and free product (ingestion, direct contact) are eliminated because there is an asphalt surface and buildings on the site acting as covers over any remaining contaminants. A restrictive covenant is also on the property, limiting how the site may be used and prohibits the use of site groundwater from any well on the property.

Groundwater monitoring was conducted for 16 years from 1997 through 2013 and continues to be monitored quarterly. Gasoline- and diesel-range TPH levels have met state standards since February 2005. However, petroleum product continues to be removed from extraction wells. Bunker-C range petroleum hydrocarbons continue to be detected at relatively low concentrations in certain site groundwater monitoring wells.

During the site visit in 2008 a monitoring well located in the public roadway at the eastern side of the intersection of South Lincoln Street and West First Avenue was missing the monument lid and well casing cap. The well was abandoned in 2010 and no longer poses a threat for potential groundwater contamination.

During the site visit on January 22, 2014, there were no indications the integrity of the cleanup has been compromised. No repair, maintenance, or contingency actions are required. The cleanup actions completed at the site appear to be protective of human health and the environment.

Olympia Dry Cleaners Site
606 Union Avenue SE, Olympia

Facility Site ID# 1446

CSID# 4722

Public comment period: 9/18/14 – 10/17/14

Draft Cleanup Plans and SEPA Review Available for Public Comment

Ecology invites the public to comment on proposed cleanup plans for the Olympia Dry Cleaners Cleanup site in Olympia. Past dry cleaning operations polluted the site's soil and groundwater with tetrachloroethylene (PCE) and its breakdown products.

The proposed cleanup plans call for excavation of remaining contamination in soil. After soil removal, the potentially liable persons will develop a long-term groundwater monitoring plan and vapor intrusion monitoring plan. Owners of the site's parcels will record environmental covenants that prohibit activities that may result in the release of contamination remaining on the site after cleanup.

The following draft documents are available for public review and comment:

- Consent decree
- Remedial investigation report
- Feasibility study
- Draft cleanup action plan
- Updated public participation plan
- State Environmental Policy Act (SEPA) review

Please direct questions and comments to site manager Steve Teel.

NEWS & NOTES

Changes made for grants that help clean up publicly owned sites

Ecology made changes to the rule that governs the Remedial Action Grants and Loans Program. Ecology uses funds generated by a voter-approved tax on hazardous substances to provide the grants and loans. Cities, counties, port districts, and other public entities can tap into the funds to help cover the costs of cleaning up contaminated sites they own.

The changes respond to revisions made by the 2013 Washington Legislature to the state's cleanup law, the Model Toxics Control Act. Lawmakers established new funding priorities for the grants and loans and directed Ecology to modify the program. Among the changes, Ecology can now:

- Enter into extended grant agreements with local governments for projects costing more than \$20 million spread over multiple budget cycles. Such projects receive priority for funds.
- Provide grants for studies that help local governments plan to clean up and reuse contaminated sites.

Other changes include clarifying funding processes, updating funding limits and grant-match requirements, and streamlining and clarifying the rule.

See <http://www.ecy.wa.gov/programs/tcp/regs/wac173322/1309.html>.

GLOSSARY

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA

actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

LUST - Leaking Underground Storage Tank

NFA - No Further Action

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

Responsiveness summary - A summary of oral and/or written public comments received by Ecology during a comment period on key documents, and Ecology's responses to those comments.

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

UST - Underground Storage Tank

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.

Additional glossary terms may be found on the Ecology website at:

http://www.ecy.wa.gov/programs/tcp/tcp_acronym_list.htm
