

Site Register

WASHINGTON STATE DEPARTMENT OF ECOLOGY TOXICS CLEANUP PROGRAM

FEBRUARY 24, 2006

The *Site Register* is published every two weeks to inform you about public comment periods, public meetings, hearings, and other information related to the study and cleanup of hazardous waste sites under the Model Toxics Control Act, Chapter 70.105D RCW.

You may also find information about public hearings, meetings, workshops, and open public comment periods on Ecology's web page. Go to www.ecy.wa.gov and click on the Public Involvement Calendar.

If you have questions or want to be added to the mailing list (electronic or paper) for the *Site Register*, contact Linda Thompson at 360-407-6069 or e-mail Ltho461@ecy.wa.gov. Specific regional contacts are listed after each entry.

If you require this publication in an alternate format, please contact the Toxics Cleanup Program at 360-407-7170, or call 711 or 1-800-833-6388 (TTY).

FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

Note: All environmental sampling data for cleanup sites must be submitted in both printed and electronic forms. Failure to do so may result in Ecology rejecting the submittal as incomplete. See pages 7 and 8 for additional details.

BENTON COUNTY

Simplot Soilbuilders, 102501 Biggam Road, Prosser

**Public comment period:
2/22/06 – 3/24/06**

Proposed Delisting From Hazardous Sites List

Ecology is proposing to remove the Simplot Soilbuilders site from its Hazardous Sites List. The site is currently ranked a "4" on the list. A rank of "1" is the highest level of concern compared to other sites on the list, and a rank of "5" is the lowest.

The site has been used as a pesticide, herbicide, and fertilizer distributor since the late 1960s. Chemical handling at the facility has generally consisted of large numbers of small quantity containers (i.e. 1-30 gallon or 10-100 pound containers).

In 1989, Ecology conducted a site investigation at the property that indicated the presence of trace amounts of five pesticides including: Aldrin, Dieldrin, DDT, DDE and DDD. These pesticides were detected at maximum concentrations of 25 to 732 parts per billion. Cleanup levels were exceeded slightly for Aldrin and Dieldrin.

The areas of concern identified in the Ecology investigation include: the equipment rinsing area, the former above ground Telone tank location and a stained area along the railroad tracks. In addition, samples were collected from an on-site domestic water supply well and analyzed for pesticides, herbicides, and fertilizer byproducts.

In 1990, the site owner contracted SEACOR to conduct additional investigation at the areas of concern. Additional soil samples were collected from the three areas of concern as well as additional groundwater samples from the water supply well.

Soil and groundwater samples collected by SEACOR did not detect any of the contaminants of concern (including the five pesticides detected in the Ecology investigation) above laboratory detection limits. Laboratory detection limits were less than Model Toxics Control Act Method B cleanup levels for the contaminants of concern.

Based upon a review of sampling reports, Ecology has determined the site is no longer a threat to human health and the environment and has recommended removing the site from the Hazardous Sites List.

Documents related to the delisting are available for public review at:

- Prosser Library, 902 7th Street, Prosser
- Ecology Central Regional Office, 15 W Yakima Ave., Suite 200, Yakima

For more information or to submit comments, please contact **Jeff Newschwander**, site manager, at 509-454-7842 or e-mail Jene461@ecy.wa.gov.

CLARK COUNTY

Camp Bonneville Military Reservation, 23201 NE Pluss Rd, Vancouver

Negotiations for a Consent Decree

Ecology and the Bonneville Conservation and Restoration Team (on behalf of Clark County and the Trust for Public Lands) are negotiating a prospective purchaser consent decree to conduct a cleanup at the Camp Bonneville Military Reservation. Negotiations began on December 19, 2005 and are expected to end by March 31, 2006. The site has:

- Diesel fuel, fuel oil, pesticides, and xylenes in the soil;
- Volatile organic compounds, including 1,1,1-trichloroethane in the soil and ground water;
- Military munitions used or disposed of at the site, including explosives, unexploded ordnance (UXO), munitions, and munitions fragments in the soil.

The constituents of those military munitions, including the explosive compound RDX (which is shorthand for Royal Demolition Explosive, sometimes referred to as Research Demolition Explosive), in the soil and ground water. This includes the presence of the chemical perchlorate in the groundwater beneath Landfill 4.

For more information, please contact **Barry Rogowski**, Project Manager, at **360-407-7236**, or e-mail **Brog461@ecy.wa.gov**.

GRAYS HARBOR COUNTY

Tony's Short Stop, 326 S. Main St., Montesano

Public comment period:
2/1/06 – 3/15/06

Agreed Order

Ecology requests public comment on a proposed Agreed Order with Tony and Hyun Kim and M&TK, Inc. for the Tony's Short Stop site.

An Open House will be held March 2, 6:30 to 8:30 p.m. at Montesano City Hall. The public will have an opportunity to ask questions and/or provide comment at the Open House.

Chemical byproducts of gasoline (gasoline range petroleum hydrocarbons) have been found in the site's soil and groundwater. These byproducts pose a potential hazard to human health and the environment.

Under the state's Model Toxics Control Act (MTCA, Chapter 70.105D RCW), previous and current owners and operators of a contaminated property are responsible for cleanup of the contamination. The Agreed Order will require the Kims and M&TK, Inc. to complete an investigation of site contamination and a feasibility study of possible cleanup actions, and develop a clean up plan.

Documents for the Tony's Short Stop site, including a fact sheet, public participation plan, and the proposed Agreed Order, may be viewed at:

- W.H. Abel Library 7125 Main S., Montesano **360-249-4211**
- Montesano City Hall, 112 N. Main, Montesano **360-249-3939**
- Ecology Southwest Regional Office, 300 Desmond Drive, Olympia **360-407-6365** (Please call for an appointment.)
- Ecology's website at www.ecy.wa.gov/programs/tcp/sites/tonys_shortstop/tonys_shortstop_hp.htm

Please submit comments to **Marv Coleman** at **360-407-6259** or e-mail **Mcol461@ecy.wa.gov**.

Brumfield Twidwell, 301 East Pioneer Avenue, Montesano

Public comment period:
2/1/06 – 3/15/06

Agreed Order

Ecology seeks public comment on a proposed Agreed Order with Bryan M. and Kathleen R. Kolb for the Brumfield Twidwell site.

An Open House will be held March 2, 6:30 to 8:30 p.m. at Montesano City Hall. The public will have an opportunity to ask questions and/or provide comment at the Open House.

Chemical byproducts of gasoline (gasoline range petroleum hydrocarbons) have been found in the site's soil and groundwater. These byproducts pose a potential hazard to human health and the environment. Past use of the property has included automobile dealerships and service stations that sold gasoline and diesel fuels.

Under the state's Model Toxics Control Act (MTCA, Chapter 70.105D RCW), previous and current owners of a contaminated property are responsible for cleanup of the contamination. As the current owner, the Kolbs are responsible for cleanup of the soil and groundwater contamination on the Brumfield Twidwell property.

The Kolbs have already done some work to remove contaminated soils from the site, but more is needed. The agreed order describes how the Kolbs will:

- Conduct an investigation of the contamination.
- Study the feasibility of cleanup alternatives.
- Develop a cleanup action plan.
- Partner with Ecology to keep the community well-informed as the work moves forward.

The investigation will take into account what has already been learned about the site, and include additional work to determine the full nature and distribution of contamination.

Documents related to the site including a fact sheet, public participation plan, and the proposed Agreed Order, may be viewed at:

- W.H. Abel Library, 7125 Main S., Montesano **360-249-4211**
- Montesano City Hall, 112 N. Main, Montesano **360-249-3939**
- Ecology Southwest Regional Office, 300 Desmond Drive, Olympia **360-407-6365** (Please call for an appointment.)
- Ecology's website at www.ecy.wa.gov/programs/tcp/sites/brumfield/brumfield_hp.htm

Please submit comments to **Marv Coleman** at **360-407-6259** or e-mail Mcol461@ecy.wa.gov.

KING COUNTY

Lower Duwamish Waterway Superfund Site-Slip 4 Early Action Area, Lower Duwamish Waterway, Seattle

**Public comment period:
2/17/06 – 3/18/06**

Public Meeting March 7, 2006

Ecology and the U.S. Environmental Protection Agency (EPA) will hold a public meeting to discuss alternatives for cleaning up contaminated sediment at Slip 4 on the Lower Duwamish Waterway: Tuesday, March 7, 2006, 5:30 p.m. open house, 6:30 p.m. public meeting at the Georgetown Gospel Chapel, 6606 Carleton Avenue South, Seattle.

Four cleanup alternatives were evaluated for the northern half of Slip 4. EPA's preferred alternative includes removing sediment and then placing an engineered cap of clean sand, gravel, and rock over the remaining contaminated sediment.

The cleanup alternatives are fully described in the draft Engineering Evaluation/Cost Analysis (EE/CA), which is part of the Slip 4 administrative record at the EPA Records Center. The EE/CA is available for review at three locations. Please call for an appointment.

Documents related to the cleanup are available for public review at:

- Georgetown Gospel Chapel, 6606 Carleton Avenue South, Seattle **206-767-3207**
- Ecology Northwest Regional Office, 3190 160th Avenue S.E. Bellevue, **425-649-7190**
- U.S. EPA Records Center, 1200 6th Avenue, Seattle, **206-553-4494**
- You can also review the EE/CA on the EPA website: <http://yosemite.epa.gov/r10/cleanup.nsf/sites/lduwamish>.

Public comments are invited at the meeting. To get more information, have your name added to our mailing list, or request interpretation of the meeting into Spanish or another language, please contact **Cindy Schuster** of EPA at: **206-553-1815** or e-mail schuster.cindy@epa.gov. TTY users, please call **1-800-877-8339**. *Si desea hablar con alguien que habla español, llame a Pamela Emerson, EPA, 206-553-1287.*

Bilingual childcare and refreshments will be available at the meeting. To register for childcare, call the Duwamish River Cleanup Coalition at **206-954-0218**.

You may also send written comments on the proposal to **Karen Keeley**, U.S. EPA, 1200 Sixth Avenue, ECL-111, Seattle, WA, 98101. Comments will be accepted through March 18, 2006.

Jorgensen Forge, 8531 E. Marginal Way South, Tukwila

Negotiations for Agreed Order to conduct Remedial Investigation/Feasibility Study

Ecology will begin negotiations with the Jorgensen Forge Company and Earl M. Jorgensen to develop an Agreed Order for the Jorgenson Forge Site. This agreed order is intended to produce a Remedial Investigation/Feasibility Study (RI/FS) which will identify the nature and extent of the contamination and identify possible ways to cleanup the site.

Once completed, the draft Remedial Investigation/Feasibility Study will be available for public review and comment.

The Jorgensen Forge site is 21.6 acres located on the east bank of the Duwamish River, between East Marginal way and the river in an industrial area. Jorgensen Forge manufacturers specialized open die steel forgings and rolled aluminum rings. In addition to steel and aluminum, Jorgensen also processes nickel, titanium, and specialized alloys.

The early history of the site is currently unclear. The property was purchased by Earl M. Jorgensen Company 1967 and sold to Jorgensen Forge Company in 1992

Previous investigations at the site have detected concentrations of polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH) and arsenic, cadmium, chromium, lead and nickel in soil exceeding the applicable cleanup levels in various areas of the site. Concentrations of TPH and metals have also been detected in groundwater at the site exceeding the applicable cleanup levels. Concentrations of TPH in groundwater that exceed the cleanup levels were detected on the eastern half of the site. Concentrations of halogenated volatile organic compounds (HVOCs), primarily vinyl chloride, that exceed the applicable cleanup levels have been detected in groundwater on the northern portion of the site. The concentrations of HVOCs detected in groundwater at the Site may be attributable to off-site sources.

This site was ranked "1" on the Washington State Hazardous Sites List. This ranking is based on a scale of 1 to 5. According to this scale, "1" represents the highest relative risk, and "5" represents the lowest relative risk. This ranking is designed to estimate the potential threat to human health and/or the environment, relative to all other sites in Washington State.

For more information please contact **John Keeling** at, site manager, at Department of Ecology, 3190 160th Avenue SE, Bellevue, WA 98008, or **425-649-7052** or e-mail Jkee461@ecy.wa.gov.

PEND OREILLE COUNTY

Lehigh Cement Company, Closed
Cement Kiln Dust (CKD) Pile, State
Route 31 (Highway 31), Milepost 14.7,
Metaline Falls

Public comment period:
1/25/06 – 2/24/06

*Draft Cleanup Action Plan, SEPA DNS
and Consent Decree*

Lehigh owned and operated a cement processing plant from 1914 until the plant was closed in 1989. Cement kiln dust, a by-product of cement processing was collected from the plant and disposed of in a landfill on-site. Contamination in water underneath and downgradient of the landfill is a result of the interaction between the cement kiln dust and groundwater. In 1996 Lehigh closed the CKD landfill, and it is now known as the Closed CKD Pile. Groundwater continues to be contaminated, is highly alkaline (high pH) and contains arsenic, chromium, lead and manganese.

The purpose of the Draft Cleanup Action Plan is to evaluate and select proposed cleanup options at the site. The proposed cleanup actions for the site are:

- Installing, operating and maintaining an in-situ (in place) groundwater treatment system east of the Closed CKD Pile between State Route 31 and Sullivan Creek.
- Installing, operating, and maintaining a gravity drain along the southern edge of the Closed CKD Pile.
- Monitoring to assess performance of the treatment system.
- Applying and maintaining institutional controls. Institutional controls are measures to limit or prohibit activities at the site that could interfere with maintaining the cleanup once it is completed. Fences, signs, and a restrictive covenant on the property are required. A restrictive covenant shows

the type and location of contamination on the property and limits how the property may be used.

The State Environmental Policy Act (SEPA) requires government agencies to consider potential impacts of a project before cleanup. After review of an environmental checklist and other site-specific information, Ecology has determined the cleanup of metals and alkaline (high pH) in groundwater will not have a probable adverse impact on the environment. This action will benefit the environment by reducing the release of toxic chemicals from the site. Therefore, Ecology has issued a Determination of Non-Significance (DNS).

The Consent Decree is a legal document that formalizes the cleanup between Ecology and the Leigh Cement Company. The decree implements the groundwater cleanup action for the site and ensures cleanup will proceed in accordance with all applicable laws and regulations. After the public comment period, the decree becomes final and is entered into Superior Court.

If ten or more people request a public hearing to give formal testimony about these documents, Ecology will comply with the requests. The three documents are available for review at the following locations:

- Metaline Falls Public Library, Cutter Theater Building, 302 Park Street, Metaline Falls, WA 99153
- Ecology Eastern Regional Office, 4601 N. Monroe, Spokane, WA 99205-1295
- Ecology's website at www.ecy.wa.gov/programs/tcp/sites/lehigh/lehigh_hp.htm

For more information, to submit written comments or request a hearing, please contact **Mr. William J. Fees** at **509-329-3589, 1-800-826-7716** or e-mail **Wfee461@ecy.wa.gov**.

INDEPENDENT CLEANUPS

A property owner may conduct an independent cleanup of contamination and submit reports to Ecology. When a property owner applies to Ecology for review of their independent cleanup, the site enters the Voluntary Cleanup Program. After review, Ecology sends a letter to the property owner stating either that additional work is required to be removed from the list of hazardous waste sites or that no further action is needed.

VOLUNTARY CLEANUP PROGRAM

Under Ecology's Voluntary Cleanup Program (VCP), a property owner cleaning up a contaminated site pays a fee for Ecology review.

When a cleanup is determined to be sufficient, Ecology issues a no further action decision.

There is a VCP contact person for each of Ecology's 4 regional offices.

SITE HAZARD ASSESSMENTS

An initial investigation is conducted when a suspected release of hazardous materials has occurred. If additional work is required, a site hazard assessment may be conducted.

These sites are ranked on a scale from 1 to 5, with 1 being the highest risk to human health and the environment. The following sites are scheduled for an assessment.

OTHER DEPARTMENT NOTICES

Data Submittal Requirements for All Cleanup Sites

Toxics Cleanup Program Policy (as of October, 2005):

Environmental sampling data for all cleanup sites must be submitted both in printed and electronic form. (The legal basis for this requirement is established

in Chapter 173-340-840(5) RCW.) at <http://www.ecy.wa.gov/laws-rules/tcp>.

Policy 840 (<http://aww.ecydev/programs/tcp/policies/Final-Policy%20840.pdf>) directs Ecology staff to take certain actions to implement these data submittal requirements. Failure to properly submit data may result in Ecology regarding the submittal as incomplete.

Most Cleanup Sites:

Sampling data should be submitted in EIM (Environmental Information Management) system format. The EIM system is Ecology's main repository for electronic environmental monitoring data. It is intended to provide an accessible means by which to examine and evaluate environmental monitoring data. The EIM system now includes a robust toolset to allow internal staff, contractors, and citizens to search for data either via a map interface, or for a specific study or result set.

For detailed data submittal instructions, please see:

- EIM Data Submittal Information at <https://fortress.wa.gov/ecy/eimimport/submit.htm>
- EIM Spreadsheets, Submittal Guidelines, and Help (WinZip zipped file) at <https://fortress.wa.gov/ecy/eimimport/eimSubmittalGuidelines2004.08.zip>

• Please direct questions to EIM Data Coordinator at eim_data_coordinator@ecy.wa.gov

Exception: Sediment Cleanup Sites

Sampling data associated with sediment cleanups must be submitted in SEDQUAL (Sediment Quality Information System) format. For details, please see:

- SEDQUAL Data Entry Templates at http://aww.ecydev/programs/tcp/smu/sedqual/sedqual_templates.htm.

Please direct SEDQUAL data submittal questions to:

- **Martin Payne**, at **360-407-6920**, by e-mail at: Mpay461@ecy.wa.gov
- **Tuan Vu**, at **360-407-7449**, by e-mail at: Tuvu461@ecy.wa.gov

Catalog of Formal Oversight Decision Documents, Orders and Decrees

The Toxics Cleanup Program maintains a list of all formal oversight decision documents under the Model Toxics Control Act. A new public feature on the Program's website contains a list of the administrative documents for Ecology-conducted or Ecology-supervised remedial actions. This list identifies all formal agreements where the Toxics Cleanup Program has issued enforcement orders or entered into consent decrees---including prospective purchaser consent decrees---and agreed orders. The purpose of this list is to provide potentially liable persons and prospective purchasers with a repository of information on the administrative decisions for cleanup at a site.

- The list may be found at: <http://www.ecy.wa.gov/programs/tcp/sites/DIGEST%2024%20-%20FINAL.pdf>
