

Site Register

WASHINGTON STATE DEPARTMENT OF ECOLOGY TOXICS CLEANUP PROGRAM

FEBRUARY 12, 2009

The Site Register is published every two weeks to inform you about public comment periods, public meetings, hearings, and other information related to the study and cleanup of hazardous waste sites under the Model Toxics Control Act, Chapter 70.105D RCW.

You may also find information about public hearings, meetings, workshops, and open public comment periods on Ecology's web page. Go to www.ecy.wa.gov and click on the Public Involvement Calendar.

If you have questions or want to be added to the mailing list (electronic or paper) for the Site Register, contact Linda Thompson at 360/407-6069 or e-mail Ltho461@ecy.wa.gov. Specific regional contacts are listed after each entry.

If you need this publication in an alternate format, please call the Toxics Cleanup Program at 360/407-7170. Persons with hearing loss may call 711 for Washington Relay Service. Persons with a speech disability may call 877/833-6341.

FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

CLARK COUNTY

Evergreen Airport, 13800-14144 SE Mill Plain Boulevard, Vancouver Facility Site ID# 7056386

**Public comment period:
2/2/09 – 3/2/09**

Proposed Delisting from Hazardous Sites List

Ecology is proposing to remove the Evergreen Airport cleanup site from the Hazardous Sites List. A Hazardous Sites List is a statewide list of contaminated properties. This site was cleaned up under the Voluntary Cleanup Program (VCP). Ecology has reviewed the site cleanup activity and determined that

- The site is no longer a threat to human health or the environment.
- The cleanup actions at the site meet MTCA cleanup standards.
- No further action is needed.

The Evergreen Airport site includes approximately 52 acres and is located at 13800 through 14114 SE Mill Plain Boulevard in Vancouver, WA. The site was formerly used as an airport and contained hangars, office buildings, a runway, control tower and eight additional buildings (leased). It was developed into an airfield in approximately 1945.

Investigations at the site revealed soil contamination at levels above state cleanup standards from gasoline, diesel and heavy oil-range petroleum hydrocarbons and metals (cadmium, chromium and lead). Groundwater was not contaminated.

The site was entered into the VCP program in October 2005. Cleanup actions at the site included excavation of contaminated soil, removal of underground and above-ground storage tanks and piping, and disposal of contaminated soil. Based on sampling results and cleanup activities, Ecology has determined that the site no longer poses a threat to the environment or human health. Ecology has issued a determination of No Further Action and is proposing to remove the site from the Hazardous Sites List. A No Further Action Opinion letter was issued in December 2008.

The Cleanup Action Plan and No Further Action Letter may be reviewed at the locations listed below until March 2, 2009.

- Fort Vancouver Public Library, 1007 E Mill Plain Boulevard, Vancouver, WA 98663. **360/695-1566**
- Ecology Southwest Regional Office, 300 Desmond Drive, Lacey, WA 98504-7775. (By appointment only: Contact **Debbie Nelson** at 360/407-6365 or e-mail **Dene461@ecy.wa.gov**.)
- Ecology's website: http://www.ecy.wa.gov/programs/tcp/sites/evergreen_Air/evgrnAir_hp.html

To submit written comments or technical questions, please contact **Steve Teel**, Site Manager, at the Ecology address listed above or at 360/407-6247 or e-mail stee461@ecy.wa.gov. For public involvement information, please contact **Meg Bommarito**, Public Involvement Coordinator at 360/407-6255 or e-mail Mbom461@ecy.wa.gov.

KITSAP COUNTY

Bainbridge Island landfill, located off NE Vincent Road between Komjima Avenue NE & Fletcher Bay Road NE,

Bainbridge Island Facility Site ID# 2602

Public comment period:
2/13/09 – 3/16/09

Periodic Review

Ecology invites you to comment on the Periodic Review for the Bainbridge Island landfill. A periodic review is conducted at least every five years after the initiation of a cleanup action, as required by the Model Toxics Control Act (MTCA). This is the first periodic review for Bainbridge Island landfill. The purpose of the review is to evaluate site conditions and monitoring data, after cleanup is considered complete, in order to ensure human health and the environment is protected.

Kitsap County acquired the land in 1942 and several parties operated it as a landfill until 1975. The landfill accepted typical domestic waste, tank bottoms from the nearby Wyckoff wood treatment facility, and petroleum products. Refuse was burned at the site until 1968.

In 1992, Ecology listed the site on its Hazardous Sites List with a rank of 1 on the Washington State Hazardous Sites List. This ranking is based on a scale of 1 to 5. According to this scale, “1” represents the highest relative risk, and “5” represents the lowest relative risk. This ranking is designed to estimate the potential threat to human health and the environment, relative to all other sites in Washington State.

Also in 1992, Kitsap County removed, stabilized, and disposed 475 tons of contaminated waste. In 1993, and additional 930 tons of contaminated soils were removed and properly disposed at a permitted facility.

Kitsap County conducted a Remedial Investigation and Feasibility Study (RI/FS) for the cleanup of the landfill in 1996 under an enforcement order by Ecology. The investigation found low levels of volatile organic compounds (VOCs), such as those found in paints and solvents, in the groundwater. The

landfill cover soils and site surface water were also found to be contaminated. The primary medium of concern at the site is groundwater because it is used as an offsite domestic drinking water source.

When contamination was found in nearby drinking water wells, the Washington State Department of Health conducted a series of health consultation reports. The reports concluded no apparent public health hazard exists as a result of exposure to the contamination detected in the domestic wells. The groundwater continues to be monitored.

The selected cleanup action alternative consisted of waste reclamation with a soil cover, monitoring, institutional controls, and monitored natural attenuation. The waste was excavated and sorted by size. All materials larger than 1.5 inches in diameter were disposed offsite in a permitted landfill. Material smaller than 1.5 inches in diameter was left onsite and covered with a soil cap.

Kitsap County Health District (Health District) reviewed the first Five-Year Review Report for Bainbridge Island Landfill, Kitsap County, Washington by CH2M Hill. Here are the findings:

- Vinyl chloride concentrations in groundwater fall below the federal/state maximum contaminant level (MCL) and the Model Toxics Control Act Method A (MTCA-A) cleanup level but exceed the MTCA-B cleanup level.
- The Health District concludes that the results presented in the report indicate that the levels of vinyl chloride are not a significant health risk to persons using groundwater for domestic purposes because the reported concentrations are below the drinking water MCL of 2.0 ug/l. The Health District recommends continued monitoring of wells in accordance with the closure action plan because vinyl chloride continues to be detected.
- The Cleanup Action Plan states monitoring may go for 30 years before groundwater cleanup levels are met.

Ecology recommends that monitoring continue in accordance with the Cleanup Action Plan (CAP) until the concentrations of the contaminants fall below the cleanup levels.

After the 30-day public comment period, Ecology will review all comments received and make recommendations for any suggested changes to the periodic review. If no significant changes are necessary, the periodic review will be considered final.

You may review the periodic review report at:

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Perkins** at **425/649-7190** for an appointment.)
- Ecology’s website: http://www.ecy.wa.gov/programs/tcp/sites/bil/bil_hp.htm

For more information or to submit written comments, please contact **Ching-Pi Wang**, Site Manager, at the Ecology address listed above or at **425/649-7134** or e-mail cwan461@ecy.wa.gov.

KING COUNTY

Joseph Simon & Sons Kent, 12441 Des Moines Memorial Way, Seattle Facility Site ID# 83334411

Public comment period:
1/30/09 – 3/2/09

Proposed Delisting from Hazardous Sites List

Ecology proposes to remove Joseph Simon & Sons Kent from the state’s Hazardous Sites List. The Joseph Simon & Sons Kent site comprises most of a 6.2 acre property divided into two lots located at 917 and 1025 South Central Avenue in Kent, Washington. The Joseph Simon & Sons Kent site was farmland during the 1960s and was later developed as automobile wrecking and metal scrap storage yards. These operations continued until the 1980s.

In 2002, Ecology added the property to the Hazardous Site Listing due to hazardous substances detected in soils. This site was given a “1” ranking on the Washington State Hazardous Sites List. This ranking is based on a scale of 1 to 5 where “1” represents the highest relative risk and “5” represents the lowest relative risk. This ranking is designed to estimate the potential threat to human health and the environment, relative to all other sites in Washington State.

A number of environmental assessments have been conducted at the site. These assessments showed soil contaminated with diesel-and oil-range petroleum hydrocarbons, antimony, arsenic, cadmium, lead, mercury, polycyclic aromatic hydrocarbons, and polychlorinated biphenyls. Sampling and testing also determined that perched ground water was contaminated by diesel-and oil-range petroleum hydrocarbons. Cleanup of the site occurred in 2005. As part of the cleanup, 20,813 tons of contaminated soil were excavated and removed from the property. Almost 300 soil samples were taken during and following the excavation to guide and confirm the cleanup. Ground water monitoring was conducted quarterly for a year in eight wells.

Ecology has determined that the remediation of the Joseph Simon & Sons Kent site meets the substantial requirements of the Model Toxics Control Act and therefore the site no longer poses a threat to human health or the environment. Ecology proposes to remove the site from the Hazardous Sites list and wants your input.

Joseph Simon & Sons Kent documents are available at

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Alexander** at 425/649-7239 or **Sally Perkins** at 425/649-7190 for an appointment.)

- Ecology’s website: <http://www.ecy.wa.gov>.

For more information or to submit written comments, please contact **Mark Adams**, Site Manager, at the Ecology address listed above or at 425/649-7107 or e-mail mada461@ecy.wa.gov.

Mike’s Aussie Machine Shop, 12441 Des Moines Memorial Way, Seattle Facility Site ID# 2334

**Public comment period:
1/30/09 – 3/2/09**

Proposed Delisting from Hazardous Sites List

Ecology proposes to remove Mike’s Aussie Machine Shop from the state’s Hazardous Sites List. The property was added to the Hazardous Site Listing in March 18, 1991 for suspected non-halogenated solvents, petroleum products, and metals in soil and ground water. This site is ranked a “5” on the Washington State Hazardous Sites List. This ranking is based on a scale of 1 to 5. According to this scale, “1” represents the highest relative risk, and “5” represents the lowest relative risk. This ranking is designed to estimate the potential threat to human health and the environment, relative to all other sites in Washington State.

In June 2005, oil, cadmium, and lead contaminated soil was excavated and disposed of offsite. Confirmation sampling showed the remaining soils met state cleanup standards.

Ecology has determined that the remediation work at the Mike’s Aussie Machine Shop site meets the substantial requirements of the state cleanup standards and therefore does not pose a threat to human health or the environment. Ecology proposes to remove the site from the Hazardous Sites list and wants your input.

Mike’s Aussie Machine Shop documents are available at

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Alexander** at 425/649-7239 or **Sally Perkins** at 425/649-7190 for an appointment.)

- Ecology’s website: <http://www.ecy.wa.gov/programs/tcp/sites/mikesAussie/machineShop.htm>

For more information or to submit written comments, please contact **Mark Adams**, Site Manager, at the Ecology address listed above or at 425/649-7107 or e-mail mada461@ecy.wa.gov.

PIERCE COUNTY

Sauro’s Cleanerama, 1401 Pacific Ave., Tacoma Facility Site ID# 4339824

**Public comment period:
2/12/09 – 3/16/09**

Agreed Order for Investigation and Cleanup

Ecology would like your comments on an Agreed Order (legal agreement) with the City of Tacoma for the Sauro’s Cleanerama site. The City of Tacoma recently purchased the property from the Estate of Pete Sauro and plans to clean up and redevelop it.

As part of this agreement, the City of Tacoma will complete a:

- Remedial Investigation to determine the nature and extent of contamination.
- Feasibility Study to look at possible cleanup options.
- Draft Cleanup Action Plan to outline the cleanup strategy.

Cleanup of contaminated soils and groundwater must meet state standards under the Model Toxics Control Act (MTCA), Chapter 70.105D.

Documents are available for public review at:

- Tacoma Public Library, 1102 Tacoma Avenue, Tacoma, WA 98402 253/591-5666

- Citizens for a Healthy Bay, 917 Pacific Avenue, Suite 100, Tacoma, WA 98402 **253/383-2429**

- Ecology Southwest Regional Office, 300 Desmond Drive, Lacey, WA 98504-7775. (By appointment only: Contact **Debbie Nelson** at **360/407-6365** or e-mail **Dene461@ecy.wa.gov**.)

- Ecology's website: www.ecy.wa.gov/programs/tcp/sites/sauros/sauros_hp.htm.

For public involvement information, please contact **Hannah Aoyagi**, Public Involvement Coordinator at **360/407-6790** or e-mail **Haoy461@ecy.wa.gov**.

SNOHOMISH COUNTY

Brashler Industrial Park [former Premier Offset Web Sales], 5701 48th Drive NE, Marysville Facility Site ID# 2765

Public comment period:
2/27/09 – 3/30/09

Proposed Delisting from Hazardous Sites List

Ecology proposes to remove Brashler Industrial Park, former Premier Offset Web Sales (Premier Offset Web Sales) from the state's Hazardous Sites List. Brashler Industrial Park operated a machine shop where the majority of the work involves rebuilding old printing presses.

Ecology conducted an initial investigation of the property in 1991, which determined printing press cleaning activities were conducted on the soil outside the building. Soil analysis found that cadmium was the only metal above state standards. Other chemicals of concern were arsenic in soil and groundwater as well as petroleum hydrocarbons in the soil. Based on

these results, the site was added to the Washington State Hazardous Sites List. The site was ranked a "3" on the Washington State Hazardous Sites List. This ranking is based on a scale of 1 to 5. According to this scale, "1" represents the highest relative risk, and "5" represents the lowest relative risk. This ranking is designed to estimate the potential threat to human health and the environment, relative to all other sites in Washington State.

Ecology has determined that the remediation work at the Premier Offset Web Sales site meets the substantive requirements of the Model Toxics Control Act (MTCA) and therefore does not pose a threat to human health or the environment. Ecology proposes to remove the site from the Hazardous Sites list and wants your input.

Premier Offset Web Sales documents are available at:

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Perkins** at **425/649-7190** for an appointment.)

- Ecology's website: http://www.ecy.wa.gov/programs/tcp/sites/premierOffset/premierOffset_hp.html

For more information or to submit written comments, please contact **Joe Hickey**, Site Manager, at the Ecology address listed above or at **425/649-7202** or e-mail **jhic461@ecy.wa.gov**.

SPOKANE COUNTY

Kaiser Aluminum & Chemical Corporation Heglar Kronquist Site, 10 miles northeast of downtown Spokane in a rural area near the intersection of Heglar and Kronquist Roads in Mead Facility Site ID# 645

Public comment period:
2/9/09 – 3/11/09

Agreed Order for a Remedial Investigation and Feasibility Study

Sampling Results to be Explained at Public Meeting on Tuesday, February 17, 2009 from 7-9 p.m. at Mt. Spokane High School - Atrium, 6015 East Mt. Spokane Park Drive Mead.

Ecology will host a public meeting to discuss the draft Agreed Order that Ecology proposes to enter into with Kaiser Aluminum & Chemical Corporation, LLC. On December 10 and 11, 2008, Ecology and Kaiser sampled 16 residential wells near the Heglar Kronquist site. Preliminary results of this sampling will be presented at the public meeting on February 17, 2009. A representative from the local regional health district will also be at the meeting to answer health-related questions.

The Agreed Order requires Kaiser to conduct a Remedial Investigation and Feasibility Study at the Heglar Kronquist site. It also formalizes the agreement between Ecology and Kaiser to assess the contamination and the need for additional cleanup actions at the site. The purpose of the Remedial Investigation is to gather more information to determine the nature and extent of site-related contamination that may be in soil and groundwater. The Feasibility Study will evaluate cleanup options.

The nearly four-acre site was used as a gravel pit until it was closed in 1969. Kaiser disposed of aluminum black dross from its Trentwood plant at the Heglar site. Black dross is a by-product from processing aluminum materials. The dross disposal was stopped in 1974 because high levels of chloride were found in shallow water supply wells and springs down gradient of the site. Air sampling conducted downwind of the site in 1979 showed elevated levels of several organic compounds. Ammonia also was detected at levels higher than accepted by state laws.

Past site data show that chemicals of concern related to the aluminum dross include: sodium, potassium, aluminum, chloride, fluoride, ammonia, nitrates and nitrites. The Remedial Investigation

will provide additional information to identify the extent and concentration of contaminants at the site.

Kaiser took several steps to address the contamination in 1984 including the installation of a cover designed to protect the dross pile, and they eventually purchased the property. Monitoring that occurred from the early 1980s through 2004 indicated decreasing but still elevated chloride and nitrates in springs downgradient from the site.

Ecology conducted an assessment of the property in 2006 and ranked the site a two on the Hazardous Sites List. The Hazardous Sites List is a record of contaminated sites throughout the state that are ranked on a scale of one to five. One represents the greatest potential threat to human health and the environment; five represents the least potential threat.

Ecology asked the Washington State Department of Health to provide an assessment of the potential health impacts of the site and evaluate the private well testing results. This work has already begun and the health department will provide its findings in a health consultation report. The report is anticipated to be available to the public in late Spring 2009.

For more details you may review the Agreed Order at the following locations:

- North Spokane Public Library, Hawthorne Branch, 44 E. Hawthorne Rd., Spokane WA 99218
- Spokane Public Library, Hillyard Branch, 4005 N. Cook St, Spokane WA 99207
- Ecology Eastern Regional Office, 4601 N. Monroe, Spokane WA 99205-1295. (Please call **Kari Johnson** at **509/329-3415** for an appointment.)
- Ecology's website: http://www.ecy.wa.gov/programs/tcp/sites/heglar/heglar_hp.html

For more information or to submit written comments, please contact

Teresita Bala at the Ecology address listed above or at **509/329-3543** or e-mail tbala461@ecy.wa.gov.

Spokane Transit Authority Former Railroad Property, south of the Interstate Fairgrounds, north of Sprague Avenue, east of Havana Street and west of Fancher Road in Spokane Valley Facility Site ID# 2165959

**Public comment period:
1/19/09 – 2/17/09**

Proposed Delisting from Hazardous Sites List

Ecology invites you to comment on the proposed removal of the Spokane Transit Authority Former Railroad Property site from the Hazardous Sites List. The site is in a commercial and industrial area and is currently vacant.

The Hazardous Sites List is a list of contaminated sites throughout the state that are ranked on a scale of one to five. One represents the greatest potential threat to human health and the environment; five the least potential threat. The site ranked a two.

Union Pacific Railroad owned the site until the 1970s when it was bought by the Chicago Milwaukee Railroad. The site was used for loading and unloading trains, storing automobiles, and as a source of gravel. In 2001 the Spokane Transit Authority purchased the property. Now the site is occasionally used for overflow parking for the fairgrounds.

Environmental assessments conducted on the property in 1998 and 1999 discovered petroleum and arsenic in soil and arsenic in groundwater. An underground storage tank was removed along with an abandoned drywell and sump in the southwest portion of the former shop building area. A total of 194 tons of petroleum-contaminated soil was removed from the site.

Arsenic was also found in soil near a monitoring well (MW2) that had been

installed as part of the environmental assessments. Soil in this area was not removed because it was 45 feet below the ground surface. Groundwater sampling conducted at the site showed arsenic at levels above what is allowed by the state. Additional groundwater monitoring was conducted from October 2007 through June 2008. The results from the last four sets of groundwater samples during these years met cleanup levels. The cleanup work was completed under Ecology's Voluntary Cleanup Program.

Ecology proposes removing the Spokane Transit Authority Former Railroad Property site from the Hazardous Site List based upon the following:

- Review of the cleanup reports.
- Supporting documentation.
- State standards for cleanup of petroleum and arsenic in soil and arsenic in groundwater have been met at the site.

Para asistencia en Español **Richelle Perez** at **360/407-6971**

For more information or to submit written comments, please contact **Ms. Patti Carter** at the Ecology address listed above or at **509/329-3522** or e-mail paca461@ecy.wa.gov.

INDEPENDENT CLEANUPS

A property owner may conduct an independent cleanup of contamination and submit reports to Ecology. When a property owner applies to Ecology for review of their independent cleanup, the site enters the Voluntary Cleanup Program. After review, Ecology sends a letter to the property owner stating either that additional work is required to be removed from the list of hazardous waste sites or that no further action is needed.

SITE HAZARD ASSESSMENTS

An initial investigation is conducted when a suspected release of hazardous

materials has occurred. If additional work is required, a site hazard assessment may be conducted. These sites are ranked on a scale from 1 to 5, with 1 being the highest risk to human health and the environment. The following sites are scheduled for an assessment.

OTHER DEPARTMENT NOTICES

Ecology's Toxics Cleanup Program (TCP) has recently updated the following policies and procedures.

Policy 340: Managing TCP's Program Plan. This policy defines roles and responsibilities for managing TCP's program plan. Updates a previous policy.

Policy 550 A: Cost Recovery. This policy provides Ecology employees guidance on recovering remedial action costs under the Model Toxics Control Act. Updates a previous policy in response to State

Auditor recommendations. Ecology will now require payment of invoices within 30 days of issuance of the invoice.

Procedure 550 A: Cost Recovery of State TCP Expenditures. This procedure describes updated procedures for issuing invoices to recover remedial action costs under the Model Toxics Control Act.

Policy 550 B: Tracking Site Activities in the Site Log. This policy has been deleted and replaced by Policy 550 A.

Procedure 550 B: Site Log Procedure. This procedure has been deleted and replaced by Policy 550 A.

To obtain a copy of these and other TCP policies and procedures, go to
