

Site Register

WASHINGTON STATE DEPARTMENT OF ECOLOGY TOXICS CLEANUP PROGRAM

DEPARTMENT OF
ECOLOGY
State of Washington

AUGUST 26, 2010

The Site Register is published to inform you about activities, related to the study and cleanup of hazardous waste sites under the Model Toxics Control Act, Chapter 70.105D RCW.

Sign up to get the Site Register online at www.ecy.wa.gov/maillist.html. Under "Newsletters" click on Site Register. Under "Options" click on Join or Leave.

Archived issues are available at <http://www.ecy.wa.gov/biblio/siteregister.html>

Vist Ecology's Public Involvement Calendar for more information. Go to www.ecy.wa.gov and click on Calendar.

If you have questions, contact Linda Thompson at 360-407-6069 or e-mail Ltho461@ecy.wa.gov. Specific contacts are listed after each entry.

To ask about the availability of this document in a format for the visually impaired, call 360-407-7170. Persons with hearing loss may call 711 for Washington Relay Service. Persons with a speech disability may call 877-833-6341.

FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

BENTON COUNTY

US Ecology, Inc, 23 miles north of Richland, near the center of the Hanford Site
Facility Site ID# 311

Change of Plans

This commercial low-level radioactive waste disposal facility is located near the center of the Hanford Site on approximately 100 acres of federal land leased to the State of Washington. It has been in operation since 1965.

Ecology has decided not to move forward at this time with an interim action at the commercial low-level radioactive waste disposal facility operated by US Ecology. The interim action was to install the first phase of a cover over the waste trenches.

It recently came to our attention that the lease between the U.S. Department of Energy and the state will need to be amended before construction can be completed, and the amendment will take six to eight months.

Site preparation activities have taken longer than we planned, and contracts for construction are behind schedule. Temperatures must be above freezing to weld the seams of the geosynthetic liner, so construction can't proceed in winter, and it is inefficient to start, then stop, then restart construction.

For more information or to discuss this decision, please phone **Larry Goldstein** at 360/407-6573 or e-mail **Larry Goldstein@ecy.wa.gov**.

CLARK COUNTY

Camp Bonneville Military Reservation, Remedial Action Unit 3 (RAU3), Proebstel
Facility Site ID# 5093080

Final Cleanup Plan for Cleanup of Munitions and Explosives Available

The final cleanup action plan (CAP) for cleanup of munitions and explosives at the Camp Bonneville military reservation is now available online.

You may find the cleanup plan for new work in Remedial Action Unit 3 on the Washington Department of Ecology (Ecology) website. Just go to www.ecy.wa.gov and click on "Camp Bonneville cleanup" under the Spotlight column.

The final CAP describes details and next steps for cleanup within each of the RAU 3 Remedial Work Areas and includes munitions of explosive concern (MEC) and munitions debris findings to date; accessibility, reuse, and hazard ranking considerations; cleanup action evaluation and selection; and the recommended cleanup action(s).

The Department of Defense owned and operated Camp Bonneville for firing range practice and training from 1910 to 1995. During that time, military ammunitions were stored or used at the site. Investigations to characterize site-wide contamination have identified unexploded ordnance, explosive compounds, lead, petroleum products, pesticides and volatile organic compounds in the soil, and perchlorate and explosive chemicals in the groundwater.

Camp Bonneville is located in Clark County, approximately five miles from Vancouver city limits. Ecology will determine when the facility meets state cleanup requirements, after which point, ownership will be transferred to Clark

County for use as a park and wilderness conservation area.

The final CAP is available at:

- Ecology Headquarters Office, 300 Desmond Drive, Lacey, WA 98503. (Please call **Carol Dorn** at **360/407-7224** or e-mail **Cesg461@ecy.wa.gov** for an appointment.)

- Ecology's Toxics Cleanup Program
Web site at: http://www.ecy.wa.gov/programs/tcp/sites/camp_bonneville/camp_bonneville_hp.htm

For more information or to submit written comments, please contact **Barry Rogowski**, Site Manager, at the Ecology address listed above or at **360/407-7236** or e-mail **brog461@ecy.wa.gov**.

KING COUNTY

**Duwamish Marine Center Site, 6365
1st Avenue South, Seattle
Facility Site ID# 21945598**

Negotiations for Agreed Order to Conduct Remedial Investigation/ Feasibility Study and Draft Cleanup Action Plan

Ecology has begun negotiations with Duwamish Marine Center for an Agreed Order to investigate contamination at the Site. This Agreed Order is intended to produce a Remedial Investigation/ Feasibility Study and draft Cleanup Action Plan which will find the nature and extent of the contamination and identify possible ways to clean up the site. Once completed, the draft Remedial Investigation/Feasibility Study report will be available for public review and comment.

The Duwamish Marine Center Site is located at 6365 1st Avenue South. Samson Tug and Barge operates in the northern portion of the Site. Historically, the site has been the location of a marine shipyard, railyard, junk dealer, various construction services companies, and a barge shipping terminal. A marine railway was located adjacent to the

southwestern shoreline from 1940 to the mid-1970s.

Potential contaminants of concern in the soil and groundwater are: metals, polychlorinated biphenyls (PCBs), petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), and solvents. The sediments in the adjacent Duwamish River and Slip 2 contain PCBs and PAHs.

For more information please contact **Victoria Sutton**, Site Manager, at Department of Ecology 3190 160th Avenue SE, Bellevue, WA 98008, or phone **425/649-7219** or e-mail **vsut461@ecy.wa.gov**.

**Meany Tower Hotel, 4507 Brooklyn
Avenue NE, Seattle
Facility Site ID# 15719255**

**Public comment period:
7/29/10 – 8/30/10**

Periodic Review Draft Report Available

Ecology invites you to review and comment on a document called a periodic review for the Meany Tower Hotel, now Hotel Deca (Site). A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

This cleanup involved an underground storage tank (UST) closure and independent cleanup action of soils containing gasoline range petroleum hydrocarbons at the Edmond Meany Hotel located at 4507 Brooklyn Avenue NE, in Seattle, Washington. The soil cleanup action consisted of the excavation and removal of petroleum contaminated soils in the vicinity of three 2,000-gallon gasoline USTs, one 6,000-gallon diesel UST, and two 500-gallon gasoline USTs and associated piping and pump islands at the property.

The petroleum affected soil has been sufficiently removed from the Site to meet the applicable MTCA Method B soil cleanup levels with the exception of a minimal volume in the south excavation located adjacent to the hotel entrance canopy. This canopy made further excavation of the soil in this area impracticable. A restrictive covenant was recorded March 1, 2002. Groundwater was monitored. Ecology agreed with a conditional point of compliance for soil (Interim 'No Further Action' letter for soil June 24, 2002) and groundwater and issued a letter on July 14, 2004 that accepted the cessation of groundwater monitoring and the closure of the monitoring wells.

Results of the Periodic Review:

- Some petroleum contaminated soils and groundwater remain on-Site.
- The asphalt cap continues to prevent human exposure to contamination by methods of ingestion and direct contact with soils.
- The Restrictive Covenant on the property protects the cap.
- Based upon the site visit conducted on June 30, 2010, no repair, maintenance, or contingency actions have been required.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made. You may review the periodic review report at the following locations:

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Perkins** at **425/649-7190** for an appointment. Hours: Tuesday – Thursday, 8:00 AM – 12:00 PM and 1:00 PM – 4:30 PM)
- Ecology's Toxics Cleanup Program
Web site at: http://www.ecy.wa.gov/programs/tcp/sites/meanyTower/meanyTower_hp.html

For more information or to submit written comments, please contact **Joe Hickey**, Periodic Reviews Coordinator, at the Ecology address listed above or at **425/649-7202** or e-mail **jhic461@ecy.wa.gov**.

**University Preparatory Academy, 8000
25th Avenue NE, Seattle
Facility Site ID# 92885787**

**Public comment period:
7/29/10 – 8/30/10**

Periodic Review Draft Report Available

Ecology invites you to review and comment on a document called a periodic review for the University Preparatory Academy (Site). A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

The University Preparatory Academy is located at 8000 25th Avenue Northeast, Seattle. The Site was filled between 1972 and 1975 with 10,000 cubic yards of fill material. During a construction project, petroleum contaminated fill material (PCF) was discovered at the Site. The discovery halted construction and prompted an environmental Site investigation to determine the nature and extent of PCF.

Based on the results from the Site investigation, it was determined that historical fill material at the Site contained petroleum hydrocarbons (TPH), carcinogenic polyaromatic hydrocarbons (cPAHs), and metals. 6,045 tons of Class II and 5,545 tons of Class III PCF were excavated from the Site. With the exception of PCF located in the northwest corner of the Site, sample results indicated that concentrations of TPHs and cPAHs were less than MTCA cleanup levels. Concentrations of cPAHs

remaining in the northwest corner of the Site do not pose a risk to human health or the environment because the volume of PCF remaining in-place is minimal and it is capped and isolated.

Groundwater was not intercepted during the remedial action. Ecology issued a 'No Further Action' letter February 2003, after a restrictive covenant was recorded.

Results of the Periodic Review:

- Some contaminated soils remain on-site.
- The asphalt cap continues to prevent human exposure to contamination by methods of ingestion and direct contact with soils.
- The Restrictive Covenant on the property protects the cap.
- Based upon the site visit conducted on June 30, 2010, no repair, maintenance, or contingency actions have been required.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An

additional public comment period will be held if significant changes are made.

You may review the periodic review report at the following locations:

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Perkins** at **425/649-7190** for an appointment. Hours: Tuesday – Thursday, 8:00 AM – 12:00 PM and 1:00 PM – 4:30 PM)
- Ecology's Toxics Cleanup Program Web site at: **http://www.ecy.wa.gov/programs/tcp/sites/univPrepAcad/univPrepAcad_hp.html**

For more information or to submit written comments, please contact **Joe Hickey**, Periodic Reviews Coordinator, at the Ecology address listed above or at **425/649-7202** or e-mail **jhic461@ecy.wa.gov**.

LEWIS COUNTY

**Cowlitz BP, 101 Mulford Road, Toledo
Facility Site ID# 1166**

**Public comment period:
8/30/10 – 9/15/10**

*State Environmental Policy Act
Determination and Checklist Available
for Public Comment*

Ecology and Texaco Downstream Properties Inc. (TDPI) entered into an Agreed Order to continue investigation and cleanup of the Cowlitz BP site in January 2010. As part of that agreement, Ecology is requiring TDPI to complete an Interim Action at the site to remove contaminated soil.

TDPI completed a State Environmental Policy Act (SEPA) checklist for the proposed Interim Action (partial cleanup) to look at the potential impacts of the project on the surrounding environment. Ecology reviewed the checklist and determined that the action was not likely to have significant negative impacts (a Determination of Non-Significance). The checklist and determination are both available for public comment. The Interim Action Work Plan will be available for review but not for comment.

The site is located at 101 Mulford Road in Toledo, on the east side of I-5 at the Vader-Ryderwood exit. It consists of an operating gas station and mini-mart and former gas station across the street on the south side of Mulford Road.

The site, which includes three parcels, was purchased in 1947 by Charles Vineyard and used for farming for eight years. In 1955, it was divided into separate lots and leased. Two of the parcels have been used as gas stations (one is currently operating). A restaurant is also present next to the gas station. Underground storage tanks at the two gas stations leaked and petroleum products were released to the environment. Total petroleum hydrocarbons were found above cleanup standards in soil and groundwater. Lead was found above

cleanup standards in groundwater. Some cleanup has occurred at the site but more work is necessary to remove remaining contamination.

The SEPA Checklist and Determination of Non-significance will be available for review and comment from August 30 – September 15, 2010 at the following locations:

- Toledo City Hall, 130 N. 2nd Street, Toledo, 98591 **360/864-4564**
- Ecology Southwest Regional Office, 300 Desmond Drive, Lacey, WA 98504-7775. (By appointment only: Contact **Debbie Nelson** at **360/407-6365** or e-mail **Dene461@ecy.wa.gov**.)
- Ecology's Toxics Cleanup Program Web site at: http://www.ecy.wa.gov/programs/tcp/sites/CowlitzFoodAndFuel/CowlitzFoodAndFuel_hp.html

For more information or to submit written comments, please contact **Steve Teel**, Site Manager, at the Ecology address listed above or at **360/407-6247** or e-mail **Steve.Teel@ecy.wa.gov**.

For public involvement information, please contact **Meg Bommarito**, Public Involvement Coordinator at **360/407-6255** or e-mail **Meg.Bommarito@ecy.wa.gov**.

PIERCE COUNTY

**Former General Metals Facility, 1902 Marine View Drive, Tacoma
Facility Site ID# 1227**

**Public comment period:
8/30/10 – 10/4/10**

Periodic Review Draft Report Available for Public Comment

Ecology invites you to review and comment on a document called a periodic review for the Former General Metals Facility cleanup site. A periodic review is conducted at least every five years after the initiation of a final cleanup action at a site, as required by the Model Toxics Control Act (MTCA).

The purpose of the review is to evaluate site conditions after cleanup is considered complete to ensure protection of human health and the environment.

The General Metals Tacoma (GMT) Site operated as a scrap metal recycling facility. Site operations resulted in the accumulation of heavy metals and polychlorinated biphenyls (PCBs) in soil and groundwater. In 1991, GMT entered into a Consent Decree with Ecology to guide cleanup of the Site. The property is currently operating as a large-scale scrap metal recycling facility.

Remedial activities were conducted from 1992-96 and included the installation of a stormwater collection and treatment system and an asphalt cap across the Site. Long-term groundwater monitoring has been conducted semi-annually since 1992. The sampling was reduced to annually for PCBs in 1996 and metals in 2002.

Since the remedial action was completed, concentrations of contaminants in groundwater have generally decreased over time, with a few exceptions including:

- Arsenic remains slightly elevated in shallow compliance groundwater wells, but at concentrations equal to those found in upgradient background wells.
- Arsenic remains elevated in deep compliance groundwater wells.

Results of the Review

- The Restrictive Covenant on the property protects the cap.
- Some contaminated soil remains on site but is protected by a cap of asphalt or buildings. The asphalt cap also protects the shallow groundwater from pollution introduced via rainwater infiltration.
- Groundwater with arsenic concentrations exceeding both background levels and the marine chronic ambient water quality criteria remains at the Site. Generally, these

elevated concentrations are found in the deep aquifer, which should have limited impact on the waters of the adjacent Hylebos waterway. Ecology is requiring General Metals to investigate the elevated levels of arsenic and continue groundwater monitoring.

Ecology will review all comments received during the comment period and may make recommendations for suggested changes. If no significant changes are made, the review will be finalized. If significant changes are made, an additional public comment period will be held.

The Periodic Review Draft Report can be found at the following locations:

- Tacoma Public Library – Main Branch, 1102 Tacoma Avenue South, Tacoma, WA, 98402 **253/591-5661**
- Ecology Southwest Regional Office, 300 Desmond Drive, Lacey, WA 98504-7775. (By appointment only: Contact **Debbie Nelson** at **360/407-6365** or e-mail **Dene461@ecy.wa.gov**.)
- Ecology's Toxics Cleanup Program Web site at: http://www.ecy.wa.gov/programs/tcp/sites/genMetals/genMetals_hp.html

For more information or to submit written comments, please contact **Mohsen Kourehdar**, Site Manager, at the Ecology address listed above or at **360/407-6256** or e-mail **Mohsen.Kourehdar@ecy.wa.gov**.

SNOHOMISH COUNTY

**Clyde Revord Motors, 7900 Evergreen Way, Everett
Facility Site ID# 63754759**

**Public comment period:
7/29/10 – 8/30/10**

Periodic Review Draft Report Available

Ecology invites you to review and comment on a document called a periodic review for the Clyde Revord Motors (Site). A periodic review is

conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

The Site is currently operated as a new and used car and truck dealership. It is located at 7900 Evergreen Way in Everett. The dealership includes a new car showroom, offices, mechanical service department, parts department, detail shop, car wash, and sales lot.

The area surrounding the on-Site buildings is asphalt-covered with various patches. One patch is from the former UST on the western portion of the Site near the service area, and the other asphalt patches were applied for cosmetic purposes. Investigations discovered that contaminated soil and groundwater still existed in active and former hydraulic lift locations. All the remaining hydraulic lifts were removed, but not all the contamination at the Site could be removed. A 'No Further Action' letter was issued in 2001 after protectiveness was shown and a restrictive covenant was recorded with the county.

Results of the Periodic Review:

- Some petroleum contaminated soils and groundwater remain on-Site.
- The remedy continues to prevent human exposure to contamination by methods of ingestion and direct contact with soils.
- The Restrictive Covenant on the property protects the remedy.
- Based upon the site visit conducted on June 30, 2010, no repair, maintenance, or contingency actions have been required.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will

be held if significant changes are made. You may review the periodic review report at the following locations:

- Ecology Northwest Regional Office, 3190 160th Ave. SE, Bellevue, WA 98008-5482. (Please call **Sally Perkins** at **425/649-7190** for an appointment. Hours: Tuesday – Thursday, 8:00 AM – 12:00 PM and 1:00 PM – 4:30 PM)

- Ecology's Toxics Cleanup Program Web site at: http://www.ecy.wa.gov/programs/tcp/sites/clydeRevMotors/clydeRevMotors_hp.html

For more information or to submit written comments, please contact **Joe Hickey**, Periodic Reviews Coordinator, at the Ecology address listed above or at **425/649-7202** or e-mail jhic461@ecy.wa.gov.

SPOKANE COUNTY

Allen's Gtx Truck Stop, 18724 East Cataldo, City of Spokane Valley Facility Site ID# 63511172

**Public comment period:
7/29/10 – 8/30/10**

Periodic Review Available To The Public

Ecology invites you to review and comment on a document called a periodic review for the Allen's GTX Truck Stop site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions after cleanup is considered complete, and to ensure protection of human health and the environment.

The Allen's GTX Truck Stop site (Site) is located immediately north of I-90 in the City of Spokane Valley. The Site has operated as a commercial truck stop and retail fueling facility since 1971.

A gasoline service facility with a canopy roof, two pump islands, and three underground storage tanks (USTs) were located on the west side of the existing

building. A Diesel UST system located on the northern portion of the Site was constructed in 1988.

The diesel pump island area was renovated between December 2000 and March 2001. Diesel-impacted soil was discovered during the renovation work. It was found under several dispensing units and in various locations under the former concrete pad where there were seams or cracks.

Remedial excavation was conducted at the Site later in 2001. Approximately 1300 tons of contaminated soil were excavated and disposed of at the Graham Road Landfill in Medical Lake, Washington. The contaminated soil could not be completely removed because the canopy is held up by posts that sit on footings in the ground. Impacted soil also remains under pump island 4 at approximately 15 feet bgs and around the post footings that support an adjacent canopy. Due to the proximity of the footings, all impacted soil could not be removed. Residual affected soil also remains in the diesel tank bed between tanks No. 2 and 3.

A Restrictive Covenant on the property is required because of the remaining contamination. The Restrictive Covenant is a document that shows the type and location of contamination and limits activities such as digging, drilling or other actions that could create exposure pathways to the remaining contaminants. The restriction provides long-term protection for the Site cleanup. This restriction is necessary for the Site to be eligible for a no further action determination. A Restrictive Covenant was recorded for the site in 2005, and a no further action determination was issued by Ecology.

Based upon the site visit conducted on May 13, 2010, asphalt, concrete, and building foundations serve to prevent human exposure to any remaining

contaminants in soil by eliminating potential ingestion or direct contact with the soils. No repair, maintenance or other

actions are required. The Restrictive Covenant for the property ensures that the integrity of the remedial action will be protected.

Ecology will review all comments received during the comment period and make recommendations for suggested changes. If no significant changes are made, the periodic review will become final. If significant changes are made, an additional public comment period will be held.

You may review the periodic review report at the following locations:

- Ecology Eastern Regional Office, 4601 N. Monroe, Spokane WA 99205-1295. (Please call **Kari Johnson** at **509/329-3415** for an appointment.)
- Ecology's Toxics Cleanup Program
Web site at: http://www.ecy.wa.gov/programs/tcp/sites/allensGTX/allensGTX_hp.html

For more information or to submit written comments, please contact **Patti Carter**, Site Manager, at the Ecology address listed above or at **xxx/509/329-3522** or e-mail patti.carter@ecy.wa.gov.

Columbia Chrome, 4501 East Trent Avenue, Spokane Facility Site ID# 35244355

**Public comment period:
7/29/10 – 8/30/10**

Periodic Review Available To The Public

Ecology invites you to review and comment on a document called a periodic review for the Columbia Chrome site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions after cleanup is considered complete, and to ensure protection of human health and the environment.

From 1990 until 1998, the property was occupied by Columbia Chrome,

a chrome plating facility. Ecology received several complaints of chromic acid dumping while Columbia Chrome operated at the Site. Ecology conducted a Site visit in the late 1990s and observed chrome contamination in soil and petroleum hydrocarbon stained soil.

Remedial actions were conducted in 1999 and 2000. Soil samples were collected throughout the site and analyzed for petroleum hydrocarbons, chrome, and lead. Areas were excavated where contamination was detected. Approximately 157 tons of contaminated soils were excavated and removed from the site. Limited amounts of lead, chromium, and diesel-contaminated soil remain at the site between 3 and 5 feet below the ground surface. The concentrations of these contaminants exceed the state standards.

In order for the site to be eligible for a no further action determination from Ecology, institutional controls in the form of a restrictive covenant were required. A restrictive covenant was recorded for the property in 2000. The covenant restricts property uses or activities that may release hazardous substances that remain at the site.

Permanent fencing at the site continues to limit access to the portions of the property covered in gravel. Asphalt covers the portions of the site accessible to the public. The asphalt prevents human exposure to any remaining contaminants in soil by eliminating potential ingestion or direct contact with the soil. The Restrictive Covenant for the property ensures that the integrity of the remedial action will be protected. Based upon the site visit conducted on February 4, 2010, no repair, maintenance or other actions are required.

Ecology will review all comments received during the comment period and make recommendations for suggested changes. If no significant changes are made, the periodic review will become final. If significant changes are made, an additional public comment period will be held.

You may review the periodic review report at the following locations:

- Ecology Eastern Regional Office, 4601 N. Monroe, Spokane WA 99205-1295. (Please call **Kari Johnson** at **509/329-3415** for an appointment.)
- Ecology's Toxics Cleanup Program
Web site at: http://www.ecy.wa.gov/programs/tcp/sites/colChrome/colChrome_hp.html

For more information or to submit written comments, please contact **Patti Carter**, Site Manager, at the Ecology address listed above or at **509/329-3522** or e-mail paca461@ecy.wa.gov.

OTHER DEPARTMENT NOTICES

MTCA Cleanup Regulation Update

Several advisory groups are providing input to Ecology's Toxics Cleanup Program regarding updates to the MTCA Cleanup Regulation. As part of this update, Ecology is also looking at cleanup portions of the Sediment Management Standards (SMS).

Ecology has concluded the first part of the Advisory Group meetings. Over the next several months we will review the input we have received and be preparing preliminary public review drafts of both the MTCA rule (Chapter 173-340 WAC) and Sediments rule (Chapter 173-204 WAC). We are anticipating having two or three more Advisory Group meetings in the fall to review this draft, as well as providing an opportunity for public review and comment.

All meetings are open to the public. Meeting materials (background documents, agendas, etc.) are posted before each meeting. Meeting summaries are posted after being reviewed by members.

Additional information is on the Ecology web site at: <http://www.ecy.wa.gov/programs/tcp/regs/2009MTCA/AdvGrpMeetingInfo/AdvGrpMtgSchedule.html>.

For more information contact **Martha Hankins** at mhan461@ecy.wa.gov or **360/407-6864**.
