FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

BENTON COUNTY

Hicks Road Pit Site Facility Site ID# 336 CSID# 4056
Hicks and Johnson roads, Prosser

Public comment period: 11/27/13 – 12/27/13

Periodic Review Available for Public Comment

Ecology invites you to review and comment on a document called a periodic review for the Hicks Road Pit site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and written comments to periodic review coordinator Jeff Newschwander.

Periodic Review Coordinator: **Jeff Newschwander**
Central Regional Office
509-454-7842
Jeff.Newschwander@ecy.wa.gov

More information may be found on Ecology's Public Events Calendar: <http://www.ecy.wa.gov/>; click on calendar.

You may review the document at the following locations:

- Hicks Road Pit site:
<https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=4056>

CHELAN COUNTY

Chelan Chevron Site Facility Site ID# 77751227 CSID# 6660
232 East Woodin Avenue, Chelan

Negotiations Extended for Agreed Order

Ecology and Chevron Products Company are negotiating an agreed order to conduct a supplemental remedial investigation at the Chelan Chevron site. Negotiations were scheduled to begin around September 25, 2013, and were anticipated to end around November 30, 2013. The anticipated date for negotiations has been extended to January 25, 2014.

Please direct questions to site manager Laura Klasner.

Site Manager: **Laura Klasner**

CLARK COUNTY

Turnbull Landfill Site
12001 NE Fourth Plain Boulevard, Orchards

Facility Site ID# 51658363

CSID# 4677

Public comment period: 12/12/13 – 1/14/14

Periodic Review Available for Public Comment

Ecology invites you to review and comment on a periodic review of the Turnbull Landfill site in Orchards. Ecology reviews cleanup sites at least every five years to make sure the sites still protect human health and the environment.

Between 1970 and 1974, the Turnbull Landfill site was a solid waste disposal facility. Studies of the site found about 39,000 cubic yards of solid waste below ground. Studies also found manganese in groundwater slightly above the state drinking standard. However, nearby residents and businesses do not use groundwater for drinking. Studies found no detectable landfill gases.

The property owner cleaned up the site by removing some solid waste and placing a cap of clean fill over the remaining waste. Ecology determined that the site required no further cleanup. An environmental covenant is in place for the site.

Cleanup actions at this site appear to be protective. Ecology will respond to comments at the end of the comment period. Ecology will do a new periodic review after another five years.

Please direct questions and comments to site manager Panjini Balaraju.

Site Manager: **Panjini Balaraju**
Southwest Regional Office
360/ 407-6335
panjini.balaraju@ecy.wa.gov

KING COUNTY

Boeing Fabrication Auburn Site
Auburn

Facility Site ID# 2018

CSID# 5049

Surface Water Sampling in Yards and Ditches to Begin

The Boeing Company will sample water in yards and ditches located in the northern area of the city of Algona. This sampling is part of a larger investigation associated with groundwater contamination from past releases of solvent chemicals on property Boeing owns in Auburn.

The groundwater table in Algona can be very high, especially during the winter months. The purpose of this sampling is to show whether chemicals in groundwater are entering surface water in ditches and yards during the wet season of the year.

Boeing will collect water samples from ditches and yards at various locations in northern Algona to determine if the solvent chemicals are present. Ecology will oversee the collection of these water samples by Boeing according to an Ecology-approved work plan. Boeing will pay all the costs for the sampling and analysis. Ecology will review all sampling results and decide if additional yard and ditch water sampling is needed.

The sampling data will be posted on the website once the data becomes available.

Please direct questions to site manager Robin Harrover with Ecology's Hazardous Waste & Toxics Reduction Program.

North Boeing Field/Georgetown Steam Plant Site **Facility Site ID# 2050** **CSID# 4765**
7370 East Marginal Way South/6700 13th Avenue South, Seattle

Final Remedial Investigation/Feasibility Study Work Plan Completed

Ecology recently completed a remedial investigation/feasibility study final work plan for the North Boeing Field/Georgetown Steam Plant site. The plan proposes investigations of soil, groundwater, soil vapor, stormwater, and building materials at the site.

The final work plan summarizes the work of previous investigations and proposes additional work that is needed to meet the requirements of the agreed order for the site.

The North Boeing Field/Georgetown Steam Plant site is on the east side of the Lower Duwamish Waterway in Seattle. Industrial operations and maintenance caused contamination at the site.

Contaminants of concern are polychlorinated biphenyls (PCBs); total petroleum hydrocarbons (TPH); polynuclear aromatic hydrocarbons (PAHs); volatile and semi-volatile organic compounds (VOCs and SVOCs); and antimony, arsenic, cadmium, chromium, copper, lead, mercury, and zinc.

Please direct questions to site manager Mark Edens.

Northlake Shipyard Site
1441 North Northlake Way, Seattle

Facility Site ID# 23849623

CSID# 853

Cleanup Work in Progress at Northlake Shipyard

Ecology has started cleanup work at the Northlake Shipyard site at 1441 North Northlake Way, Seattle. Ecology's contractor, Redside Construction, will remove arsenic-contaminated sandblast grit from the sediments around the piers. The work began in early December and is expected to last for about three months.

The cleanup work will take place from 6 a.m. to 10 p.m. Monday through Friday and if needed on Saturday and Sunday between 9 a.m. to 10 p.m. The contractor will comply with the City of Seattle's noise ordinance.

Traffic/Mariner advisory: Expect traffic delays along North Northlake Way between 6 a.m. to 10 p.m. Monday through Friday and possibly on Saturday and Sunday between 9 a.m. to 10 p.m. Mariners are requested to use caution when motoring near the area.

This work is being done under a prospective purchaser consent decree between Ecology and Northlake Shipyard Inc. (Northlake) to clean up arsenic-contaminated sandblast grit that was at the site prior to Northlake purchasing the property.

The work will involve:

- Dredging about 8,000 cubic yards of sediment from around the western pier and beneath the dry docks. This will remove the top two feet of sediment.
- After dredging, six inches of clean sand will be placed over the area that was dredged.
- A silt curtain or sediment barrier (extending from the surface to the lake bottom) will be set up around the work area to contain sediment that is disturbed during the dredging. Water quality measurements will be taken outside of the silt curtain to confirm that the work does not result in excessive turbidity or cloudiness in the water.
- Every two to three days, trucks will remove the dredged material from the site and take it to a permitted landfill. This will result in an additional 20 to 30 trucks using North Northlake Way.

Please direct technical questions to site manager Libby Goldstein.

Site Manager: **Libby Goldstein**
Northwest Regional Office
425/ 649-7242
libby.goldstein@ecy.wa.gov

Please direct construction questions to Dave Berry, Redside Construction's on-site coordinator.

North Lot Development Site

Facility Site ID# 5378137

CSID# 1966

South King Street and Occidental Avenue South, Seattle

Public comment period: 11/15/13 – 12/16/13

Proposed Consent Decree, Other Documents Available for Public Review and Comment

Ecology invites you to review and comment on a proposed consent decree with North Lot Development and 255 South King Street LP for the North Lot Development cleanup site north of CenturyLink Field at the southeast intersection of South King Street and Occidental Avenue South in Seattle.

The proposed consent decree will supersede a current prospective purchaser consent decree. The site is being developed as part of an inter-modal regional transit hub adjacent to King Street Station.

The site includes two parcels, west (North Lot Development) and east (255 South King Street LP). North Lot Development sold the east parcel to 255 South King Street LP and maintains ownership of the west parcel.

The new consent decree describes the work completed by North Lot Development on the west parcel and identifies the remaining remedial activities to be performed on the parcel.

Under the consent decree, North Lot Development will have no new or additional obligations regarding the west parcel, other than groundwater compliance monitoring and implementing institutional controls on it.

The consent decree will also obligate 255 South King Street LP to perform the cleanup at the east parcel. Work will include:

- Preparing an addendum to the original feasibility study report that incorporates the planned development of the east parcel.
- Preparing an addendum to the original cleanup action plan that incorporates the planned development of the east parcel.
- Implementing the cleanup action plan addendum for the east parcel.

Ecology invites comments on:

- The proposed consent decree.
- The feasibility study addendum.
- The cleanup action plan addendum.
- A revised public participation plan.

Please direct questions and comments to site manager Jing Liu.

KLICKITAT COUNTY

Columbia Gorge Aluminum Site

Facility Site ID# 95415874

CSID# 11797

85 John Day Dam Road, Goldendale

Negotiations in Progress for Agreed Order

Ecology is negotiating an agreed order with Lockheed Martin Corporation and NSC Smelter LLC, the potentially liable parties, to complete the remedial investigation and feasibility study for the Columbia Gorge Aluminum site.

The Columbia George Aluminum Smelter produced aluminum and aluminum products for nearly 30 years. The smelter is located in Goldendale on about 350 acres along the Columbia River. During the operation of the smelter, the various owners have managed hazardous and solid waste at several locations on the site.

Smelter operations contaminated soil and groundwater at the site with fluoride, PAHs, cyanide, and PCBs. The facility was added to the Hazardous Sites List in 1990.

Please direct questions to site manager James DeMay in Ecology's Industrial Section.

PEND OREILLE COUNTY

Airport Kwik Stop Site

Facility Site ID# 32584416

CSID# 4203

West of Highway 31 and north of Greenhouse Road, Ione

Public comment period: 11/27/13 – 12/30/13

Draft Remedial Investigation and Feasibility Study Reports Available for Public Review and Comment

Ecology invites comments on the draft remedial investigation and feasibility study (RI/FS) reports conducted at the Airport Kwik Stop site. These documents will help guide cleanup of site-related contamination. The site begins west of Highway 31 and north of Greenhouse Road and extends generally east and southeast toward the river in Ione.

Contamination is found in soil and groundwater at the Airport Kwik Stop, beneath the Cabin Grill, and on several private properties northeast and southeast of the Cabin Grill. The remedial investigation report provides information about the extent of contamination at the site.

Current contaminants of concern include volatile organic compounds (VOCs), benzene, toluene, ethylbenzene and xylenes (BTEX), and gasoline range petroleum hydrocarbons (GRPH) in soil and groundwater. The feasibility study report evaluates four options for cleanup at the site.

Monitoring showed contamination in groundwater that forms what is called a plume. Petroleum product is floating on the top 1 to 2 inches of the groundwater plume beneath the Cabin Grill.

The plume also contains petroleum product that has dissolved and become part of the groundwater that lies under the Airport Kwik Stop fuel dispensers and moves downgradient. The plume has migrated to the east-southeast at least 1,400 feet. Three domestic water wells have been impacted by the plume as well as the domestic water well at the Cabin Grill.

Potential impacts to humans and wildlife could occur if the contaminated groundwater plume rose to the surface in springs, seeps, or small ponds along the Pend Oreille River. Although Ecology has not found contamination in these areas, it is recommended that people avoid contact with these types of springs, seeps or ponds at this time.

Two treatment systems are in place to address the soil and groundwater contamination. Testing shows the soil vapor extraction system is working successfully to remove petroleum contaminants from soil. However, the air sparge system is not effective for removing contaminants from groundwater. The feasibility study evaluates four options to address remaining contaminants.

Site Proposed for Removal from Hazardous Sites List

Ecology proposes to remove the Van Cleave Body Shop site from the Hazardous Sites List (HSL). The site was ranked a 1 on the HSL (a rank of “1” represents the highest level of risk compared to other sites, and a rank of “5” represents the lowest). Ecology has determined that this site does not pose a threat to human health or the environment and recommends removing the site from the HSL.

Gailleon Park Site
101 North 65th Avenue, Yakima

Facility Site ID# 44832462

CSID# 2859

Public comment period: 11/27/13 – 12/27/13

Second Periodic Review Available for Public Comment

Ecology invites you to review and comment on a document called a periodic review for the Gailleon Park site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and written comments to periodic review coordinator Jeff Newschwander.

Periodic Review Coordinator: **Jeff Newschwander**
Central Regional Office

NEWS & NOTES

Status Report on Pasco Landfill

The Department of Ecology is working with several parties who are responsible for cleanup of contamination at the Pasco Landfill in Franklin County. The landfill is located on Dietrich Road north of the intersection of Kahlotus Road with U.S. Highway 12. Treatment systems are in place at the landfill to decrease contamination. These systems are showing positive improvements.

On Dec. 2, Ecology learned there is a fire under the ground in a small section of the landfill where old municipal wastes are buried. The area is approximately 25 feet in diameter. All parties involved are working to solve this situation quickly and keep the public informed as soon as information is received. The site is closed to the public and posted with no trespassing signs.

Currently, we know:

- There is no immediate threat to people living near the site or to workers and businesses in the area based on current knowledge.
- Actions are already being taken to evaluate and suppress the fire. Ecology is working closely with Pasco and Franklin County fire departments and other technical experts who know how to monitor and suppress these types of fires. Elected officials are also aware of the situation.
- Ecology will provide the community additional updates as more information is obtained.

If you have concerns or questions, please contact Ecology site manager Chuck Gruenenfelder at Ecology's Spokane office at 509/ 329-3429 or e-mail at chgr461@ecy.wa.gov. Para asistencia en español, comuníquese con Gregorio Bohn al 509/ 454-74174.

GLOSSARY

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree

LUST - Leaking Underground Storage Tank

NFA - No Further Action

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

Responsiveness summary - A summary of oral and/or written public comments received by Ecology during a comment period on key documents, and Ecology's responses to those comments.

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

UST - Underground Storage Tank

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.

Additional glossary terms may be found on the Ecology website at:
