FORMAL CLEANUPS

Ecology oversees complex cleanup sites to ensure that your health and that of the environment are protected.

CLARK COUNTY

Port of Vancouver (Cadet/Swan) and NuStar Site Facility Site ID# 1026
CSID# 3450

2565 NW Harborside Drive, Vancouver (NuStar)

2500 West Fourth Plain Boulevard (Cadet Manufacturing)

Between 2001 and 2501 West Fourth Plain Boulevard (Swan Manufacturing)

Public comment period: 1/22/15 – 3/9/15

Agreed Order, Other Cleanup Documents Available for Public Review and Comment

Ecology invites you to comment on a proposed legal agreement and cleanup studies for the Port of Vancouver (Cadet/Swan) and NuStar cleanup site. The Port of Vancouver and NuStar Terminals Services Inc. are cleaning up contaminated soil and groundwater at and near the Port of Vancouver and Fruit Valley neighborhoods. The following are available for review and comment:

- Agreed order – a legal agreement that requires the Port of Vancouver and NuStar Terminals Services, Inc. to draft a preliminary cleanup action plan. The plan will outline the recommended final cleanup approach.
- Remedial investigation (RI) reports – describes the nature and extent of groundwater contamination from three facilities.
- Feasibility study (FS) – compares cleanup options for the area-wide groundwater plume.
- Public participation plan – describes the tools Ecology will use to inform the public and gather feedback.

Please direct questions and comments to Ecology site manager Craig Rankine.

Fort Vancouver Plywood Site
901 Port Way, Vancouver

Facility Site ID# 1029

CSID# 3057

Public comment period: 2/6/15 – 3/9/15

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a periodic review for Fort Vancouver Plywood. Ecology reviews cleanup sites at least every five years to make sure they still protect human health and the environment.

Owned by the Port of Vancouver, the former plywood mill site was found to have lead and carcinogenic (cancer-causing) contaminants in soil. Groundwater was also contaminated. These contaminants are linked with human activity and industrial trash buried on the site.

In 1998, 26,000 cubic yards of contaminated soil was removed from the site. The site was backfilled with clean soil and capped. Groundwater is monitored semiannually.

Two environmental covenants were recorded in 2000 and 2006. The covenants prohibit activities that could result in the release of pollutants contained on site. Cleanup actions at this site are protective and the covenant requirements are being met.

Please direct questions and comments to Ecology site manager Panjini Balaraju.

Site Manager: **Panjini Balaraju**

COWLITZ COUNTY

Reynolds Metals Aluminum Smelter Site
4029 Industrial Way, Longview

Facility Site ID# 29

CSID# 11796

Final Remedial Investigation/Feasibility Study Available; Discussions for Consent Decree Begin

Ecology held a public comment period on the remedial investigation/feasibility study (RI/FS) for the Reynolds Metals cleanup site in Longview from June 2 to August 1, 2014. The RI/FS is now final.

Ecology, Northwest Alloys and Millennium Bulk Terminals LLC have begun discussions on the Consent Decree to implement the future Cleanup Action Plan at the former Reynolds Metals Aluminum Smelter in Longview. Discussions began on January 22, 2015.

Please direct questions and comments to site manager Guy Barrett.

KING COUNTY

Journal American Site
1705 132nd Avenue NE, Bellevue

Facility Site ID# 2558

CSID# 5149

Public comment period: 1/22/15 – 2/23/15

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for a portion of the Journal American site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy. Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and comments to periodic review coordinator Eugene Freeman.

LEWIS COUNTY

I-5 Foodmart Site
1120 W Harrison Avenue, Centralia

Facility Site ID# 7435285

CSID# 5435

Public comment period: 2/19/15 – 3/23/15

Proposed Removal of Environmental Covenant Available for Public Review and Comment

Ecology invites you to comment on the decision to remove an environmental covenant from the I-5 Foodmart cleanup site. The site is a gas station and convenience store. In the past, site owners found soil and groundwater polluted with gasoline-range petroleum hydrocarbons and benzene.

The owners cleaned up the site by upgrading the underground storage tank. In 2001, Ecology decided cleanup was complete and the site owners recorded an environmental covenant for the property. It prohibits activities that could result in the release of contaminants that remain at the site.

The owners have monitored groundwater for many years to make sure contamination was naturally decreasing. Now, more than four quarters of monitoring show that contamination is below cleanup levels. The environmental covenant is no longer needed.

Please direct comments and questions to site manager Paul Turner.

Site Manager: **Paul Turner**
Southwest Regional Office
360/ 407-6719
Paul.Turner@ecy.wa.gov

More information may be found on Ecology's Public Involvement Calendar: <http://www.ecy.wa.gov/>; click on calendar.

PIERCE COUNTY

Oline Storage Yard Site
1915 Marine View Drive, Tacoma

Facility Site ID# 2452753

CSID# 2464

Public comment period: 2/6/15 – 3/9/15

Site Proposed for Removal from Hazardous Sites List

Ecology invites you to comment on the proposal to remove Oline Storage Yard from the Hazardous Sites List. The site was used as a salvage yard. This resulted in high levels of polychlorinated biphenyls (PCBs) in the soil.

In 2014, 16.5 cubic yards of PCB-contaminated concrete and soil was removed from the site. Cleanup is complete. Test results show that cleanup was successful.

At the end of the comment period, we will respond to comments in a responsiveness summary. We will send this document to those who commented and post it online. The last step is to remove the site from the Hazardous Sites List.

Please direct comments and questions to site manager Marv Coleman.

Site Manager: **Marv Coleman**
Southwest Regional Office
360/ 407-6259
Marv.Coleman@ecy.wa.gov

More information may be found on Ecology's Public Involvement Calendar: <http://www.ecy.wa.gov/>; click on calendar.

USG Taylor Way Plant Site
2301 Taylor Way, Tacoma

Facility Site ID# 1260

CSID# 5003

Public comment period: 2/6/15 – 3/9/15

Agreed Order Amendment Available for Public Review and Comment

Ecology invites you to comment on a proposed amendment to the agreed order for the USG Taylor Way Plant site.

Ecology, the USG corporation, and the Port of Tacoma entered an agreed order (legal agreement) to determine the extent of contamination and to study cleanup options. Arsenic and other heavy metals have been found in soils and groundwater on site.

In 2010, USG and the port partially completed tasks in the order. Ecology has determined this amendment is necessary to:

- Require a more comprehensive supplemental RI report that includes newer data.
- Revise and update the schedule for completing the FS.
- Add a requirement for the draft cleanup action plan.

Please direct comments and questions to site manager Joyce Mercuri.

Site Manager: **Joyce Mercuri**
Southwest Regional Office
360/ 407-6260
Joyce.Mercuri@ecy.wa.gov

American Plating Site
2110 East D Street, Tacoma

Facility Site ID# 1202

CSID# 2539

Public comment period: 2/19/15 – 3/20/15

Site Proposed for Removal from Hazardous Sites List

Ecology invites you to comment on the proposal to remove American Plating from the Hazardous Sites List. The 1.5-acre site was used for electroplating until it went bankrupted in 1989. The Foss Waterway Development Authority (FWDA) now owns the site.

In 2012, 1,060 tons of heavy metal contaminated soil was removed from the site. Digging sites were filled in with clean soil and capped. Cleanup is complete. FDWA will monitor caps. Ecology will review the site every five years to make sure cleanup actions are still protective of human health and the environment.

At the end of the comment period Ecology will respond to comments. The last steps are to finalize the letter of completion and remove the site from the Hazardous Sites List.

Please direct comments and questions to site manager Marv Coleman.

Site Manager: **Marv Coleman**
Southwest Regional Office

BPA Tacoma Occidental Sludge Site
Taylor Way & E West Rd, Tacoma

Facility Site ID# 1262

CSID# 3911

Public comment period: 2/19/15 – 3/20/15

Five-Year Review Report Available for Public Review and Comment

Ecology invites you to review and comment on a periodic review for BPA Tacoma Occidental Sludge. Ecology reviews cleanup sites at least every five years to make sure they still protect human health and the environment.

In the 1960s and '70s, Bonneville Power Administration and Occidental Chemicals Corporation placed waste materials on the site.

In 1997, 18,000 cubic yards of polluted soil and sludge was put in an on-site landfill. The landfill was capped to eliminate exposure to humans. In 1998, an environmental covenant was recorded for the site prohibiting activities that could result in the release of contaminants that remain on site.

The landfill has been maintained and cap is in satisfactory condition.

At the end of the comment period Ecology will respond to comments. The last steps are to finalize the letter of completion and remove the site from the Hazardous Sites List.

Please direct comments and questions to site manager Panjini Balaraju.

Site Manager: **Panjini Balaraju**

SNOHOMISH COUNTY

Matazama Creek Apt Site
11311 19th Avenue SE, Everett

Facility Site ID# 2822

CSID# 3563

Public comment period: 1/22/15 – 2/23/15

Periodic Review Available for Public Review and Comment

Ecology invites you to review and comment on a document called a periodic review for a portion of the Matazama Creek Apt site. A periodic review is conducted at least every five years after the initiation of a cleanup action at a site or property, as required by the Model Toxics Control Act (MTCA).

The purposes of the review are to evaluate site conditions and to ensure continued protection of human health and the environment, when institutional controls are used as part of a remedy.

Ecology will review comments received during the comment period and make recommendations for suggested changes. The periodic review will become final if no significant changes are made. An additional public comment period will be held if significant changes are made.

Please direct questions and comments to periodic review coordinator Eugene Freeman.

Periodic Review Coordinator: **Eugene Freeman**

For special accommodations or documents in alternate format, call 425/ 425-7117, 711 (relay service), or 877/ 833-6341 (TTY).

North Marina Ameron/Hulbert Site

Facility Site ID# 68853261

CSID# 3546

Between 11th and 13th Streets off West Marine View Drive, Everett

Consent Decree, Cleanup Action Plan Now on File

The consent decree (CD) and cleanup action plan for the North Marina Ameron/Hulbert site was filed and entered at the Snohomish County District Courthouse on January 16, 2015. The consent decree is a formal legal document between Ecology and the potentially liable persons (PLPs) that requires the PLPs to carry out specifically identified cleanup actions. The cleanup action plan describes the proposed cleanup action for the Site and outlines requirements for the cleanup.

The cleanup action for the site includes excavation and disposal of metals contaminated soil (i.e., arsenic and lead) in two areas of the site; replacement of a stormwater pipe that runs through the contaminated area; containment and institutional controls; and long-term groundwater compliance monitoring.

Please direct questions to site manager Andrew Kallus.

SPOKANE COUNTY

City Parcel Site (formerly Spokane Transformer, Inc.) Site
708 North Cook Street, Spokane

Facility Site ID# 650

CSID# 1023

Public comment period: 1/30/15 – 3/2/15

Cleanup Work Plan Available for Public Review and Comment

Ecology proposes to extend soil remediation at the City Parcel site and to remove PCB-contaminated soil along the west fence line. Previous sampling confirmed there is residual soil contamination under the surface along the fence line in this area.

Ecology drafted a work plan outlining tasks to be completed when work was done in 2014 north of the fence line. This same work plan will apply for the proposed work to the west. These tasks, in addition to the previous work done on the north fence line, are a supplement to the original remedial investigation conducted at the site.

The work will include removing the fence along the west portion of the site, removing contaminated soil, and replacing it with clean fill. An addendum to the State Environmental Policy Act (SEPA) checklist and Determination of Non-Significance (DNS) is included as part of the supplemental work. The addendum does not require a formal comment period but Ecology wants the public to be aware there has been an addendum. It is to provide notice that work will continue to the west of the City Parcel property fence along Cook Street.

Access to the area where soil work will be conducted, in the City of Spokane right-of-way for North Cook Street, has been obtained. Ecology will begin remediation after public comment has been considered.

Please direct questions to site manager Huckleberry Palmer.

Marshall Landfill Site

Facility Site ID# 648

CSID# 1022

1 mile southwest of Marshall

Public comment period: 2/23/15 – 3/25/15

Public meeting: 7 p.m. 3/5/15 at Marshall Community Church, 5910 W. Park Street, Marshall

Draft Work Plan, Public Participation Plan Available for Public Review and Comment

Ecology invites you to attend a public meeting and learn why Ecology proposes to investigate soil and groundwater at the Marshall Landfill site near Marshall. Ecology will provide background about the site, the current status, and proposed work as part of a remedial investigation and feasibility study. After the presentation, Ecology's site manager will answer questions.

The remedial investigation will build on previous studies done at the site. These studies will be reviewed, more data will be gathered, and the nature and extent of contamination in soil and groundwater and their impacts will be identified. The feasibility study will identify and evaluate cleanup options.

There are several contaminants of concern. The work plan contains a comprehensive list. The main contaminants include volatile organic compounds (VOCs) and metals. The metals are arsenic, cadmium, copper, lead, and mercury.

The work plan and public participation plan are the documents that will guide the work and are available for comment. The work plan provides details about the work, and the public participation plan outlines ways Ecology will involve and inform the public about cleanup at the site. A detailed feasibility study will be available for public comment once it is completed.

Please direct questions to site manager Patrick Cabbage.

STEVENS COUNTY

Colville Post and Poles Site
154 Highway 20 East, Colville

Facility Site ID# 765

CSID# 46

Public comment period: 2/6/15 – 3/9/15

Draft Work Plan, SEPA Checklist, Determination of Nonsignificance, Participation Plan Available for Public Review and Comment
Ecology held a public meeting on February 18, 2015, to discuss proposed cleanup actions at the Colville Post & Poles site. Ecology provided background about the site and the current status of proposed work called interim actions.

The interim actions will identify any immediate actions that need to be taken at the site to protect human health and the environment. This includes reducing remaining sources of contamination that may impact surface water.

The primary contaminants of concern focus on chemicals used in treating wood products. The contaminants include: semi-volatile organic compounds (SVOCs) which include PCP and polycyclic aromatic hydrocarbons (PAHs); diesel-range petroleum hydrocarbons (DRPH); metals which include arsenic, cadmium, and mercury; and dioxins.

The following are some highlights of the work Ecology proposes to complete:

- Obtain all necessary permits to do the work.
- Remove debris in and around surface water and concrete footings in the process area. Temporarily stockpile debris as necessary.
- Conduct soil and groundwater assessments.
- Prepare a report outlining the findings and work conducted during the interim actions.

YAKIMA COUNTY

Lincoln Avenue Car Wash Site
302 N 1st St, Yakima

Facility Site ID# 79271271

CSID# 6680

Cleanup Report Available for Public Review

Ecology has received a report for the Lincoln Avenue Car Wash site in Yakima. The Soil and Groundwater Assessment report is available for public review. The site is one of several being cleaned up under Ecology's Eastern Washington Clean Sites Initiative.

The Lincoln Avenue Car Wash site is currently owned by the City of Yakima and operated as a fuel station for city fleet vehicles; a service station and car wash historically operated at the site. Soil at the site was contaminated with petroleum products.

For more information:

- Lincoln Avenue Car Wash site: <https://fortress.wa.gov/ecy/gsp/Sitepage.aspx?csid=6680>

GLOSSARY

Agreed order - A legal agreement with Ecology to make sure the cleanup meets the standards of Washington State's cleanup law, the Model Toxics Control Act (MTCA).

Cleanup action plan (CAP) - A document that describes the selected cleanup method(s) and specifies cleanup standards and other requirements. It is based on information and technical analyses generated during the RI/FS and consideration of public comments and community concerns. A draft of the CAP (DCAP) is made available for public review and comment before finalizing.

Comment period - A time period during which the public can review and comment on various documents and Ecology or EPA actions. For example, a comment period is provided to allow community members to review and comment on proposed cleanup action alternatives and proposed plans. Also, a comment period is held to allow community members to review and comment on draft feasibility studies.

Consent decree - A formal legal agreement that is filed with a court. It describes studies and/or cleanup work to be done at a site and the terms under which that work is to be done.

Engineering design report - Engineering design reports outline the specific details for implementation and operation of the first phase of the cleanup actions.

ERTS - Environmental Report Tracking System

Five-year periodic review - A periodic review is conducted at least every five years after the initiation of a cleanup action at a site, as required by the Model Toxics Control Act (MTCA). The purposes of the review are to evaluate site conditions, after cleanup is considered complete, and to ensure protection of human health and the environment.

Hazardous Sites List - A statewide list of contaminated properties. Ecology may remove a site from the list only after determining that all remedial actions except confirmational monitoring have been completed and compliance with the cleanup standards has been achieved at the site, or the listing was erroneous.

Independent cleanup action - Any remedial action without department oversight or approval and not under an order or decree.

LUST - Leaking Underground Storage Tank

NFA - No Further Action

Public participation plan - Outlines and describes the tools Ecology will use to inform the public about site activities, and it identifies opportunities for the community to become involved in this process.

PSI - Puget Sound Initiative

RCW - Revised Code of Washington

Remedial action - Construction work done to clean up a contaminated site.

Remedial investigation/feasibility study - Two distinct but related studies. They are usually performed at the same time, and together referred to as the "RI/FS."

RI/FS - See Remedial Investigation/Feasibility Study

SEPA - State Environmental Policy Act

Site Hazard Assessment (SHA) - An assessment to gather information about a site to confirm whether a release of hazardous substances has occurred and to enable Ecology to evaluate the relative potential hazard posed by the release.

UST - Underground Storage Tank

UXO - Unexploded Ordnance

Voluntary Cleanup Program (VCP) - The VCP is one of several options for cleaning up a hazardous waste site under the state's cleanup law. Under this option, property owners may perform a cleanup independently and request services from Ecology for a fee.

WAC - Washington Administrative Code

WARM, Washington Ranking Method - The method used to rank sites placed on the Hazardous Sites List.
