Ecology has **MODIFIED** the decision of the Board as follows:

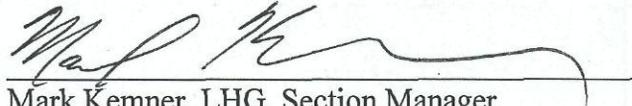

- 1) The Water Board’s decision has been modified as noted in the table above.
- 2) The “Combined Instream Quantity” as defined on page 7 of the Water Board’s Report of Examination (ROE) and as used elsewhere in the ROE, shall not be “estimated” using the instantaneous rate quantities listed on page 7 of the ROE. The “Combined Instream Quantity” shall be determined as being synonymous with the instantaneous rate for the primary reach, and therefore, shall at no time exceed 0.33 cfs. Accordingly, the instantaneous quantities listed on page 7 of the ROE for both the primary reach and for irrigation are hereby stricken, and replaced with the quantities noted in the table above.
