DESCRIPTION OF PROPOSED WORKS

Isaak Land plans to irrigate 51.8 acres lying within SE1/4 SW1/4 and the S1/2 NE1/4 SW1/4, Section 26, Township 25 North, Range 28 East, WM, Grant County, Washington; lying within parcel number 171554000 and 24.2 acres lying within the S1/2 Section 21, Township 25 North, Range 30 East, WM, Grant County, Washington; lying within parcel number 181836000. The acres that will be irrigated in Section 26 will utilize waters from the existing well and four additional existing wells and pump systems. This acreage will be irrigated as part of a larger integrated system. A portion of an existing part circle will be utilized to irrigate the 51.8 acres. The acres that will be irrigated in Section 21 will utilize waters from three existing wells and pump systems. This acreage will be irrigated as part of a larger integrated system. This acreage will be irrigated utilizing center pivots that will be installed or expanded in the future. The required pipelines will be installed as needed.

The applicant is not expanding the currently authorized Qi and Qa. The added points of withdrawal (wells) will service the existing and additional places of use without any changes to the total amount of water withdrawn.

DEVELOPMENT SCHEDULE

BEGIN PROJECT BY THIS DATE:	COMPLETE PROJECT BY THIS DATE:	COMPLETE CHANGE AND PUT WATER TO FULL USE BY THIS DATE:
January 1, 2013	January 1, 2016	January 1, 2017

REPORT

BACKGROUND [See WAC 173-153-130(6)(a)

On January 26, 2012, Isaak Land Inc. of Coulee City, Washington filed an Application for Change/Transfer to add points of withdrawal, and add place of use under this certificate with the Grant County Water Conservancy Board (Board). The application was accepted at an open public meeting on January 26, 2012, and the Board assigned application number GRAN-12-02. The Washington State Department of Ecology (Department) assigned WRATS number CG-*02641C@1 to this change request.

Isaak Land Inc., owns Ground Water Certificate 2802-A with a priority date of May 20, 1957, which authorizes the right to develop a system to withdraw water from one (1) well in the amount of 325 gpm, 224 acre-feet per year for the irrigation of 56 acres, along with domestic supply. The applicant has applied to change the place of use and add points of withdrawal under the certificate.

The applicant requests to add seven points of withdrawal to the existing point of withdrawal under this certificate. The locations of the proposed points of withdrawal are:

Well #1, 1380 feet north and 650 feet west from the SE corner of Section 26, Township 25 North, Range 28 East, WM, Grant County, Washington; being within the NE1/4 SE1/4 of said Section 26; lying within parcel number 171560000.
Well #2, 900 feet north and 30 feet west from the S1/4 corner of Section 26, Township 25 North, Range 28 East, WM, Grant County, Washington; being within the SE1/4 SW1/4 of said Section 26; lying within parcel number 171554000.
Well #3, 1300 feet north and 660 feet west from the E1/4 corner of Section 26, Township 25 North, Range 28 East, WM, Grant County, Washington; being within the SE1/4 NE1/4 of said Section 26; lying within parcel number 171549001.
Well #4, 1300 feet north and 60 feet west from the center of Section 35, Township 25 North, Range 28 East, WM, Grant County, Washington; being within the SE1/4 NW1/4 of said Section 35; lying within parcel number 171589001.
Well #5, 250 feet south and 1200 feet east from the N1/4 corner of Section 35, Township 25 North, Range 28 East, WM, Grant County, Washington; being within the NE1/4NW1/4NE1/4 of said Section 35; lying within parcel number 171588001.
Well #6, S1/2S1/2 Section 16, Township 25 North, Range 30 East, W.M., Grant County, Washington; lying within parcel numbers 181822001 & 181823000.

Well #7, S1/2 S1/2 Section 16, Township [redacted] North, Range 30 East, WM, Grant, County [redacted] ashington; lying with parcel numbers 181822001 & 181823000.
Well #8, 340 feet south and 600 feet east from the center of Section 16, Township 25 North, Range 30 East, WM; being within the NW1/4 SE1/4 of said Section 16, Grant County, Washington; lying within parcel number 1818220.

All wells lying within WRIA 42.

The applicant requests changes to the place of use.

The existing certificated place of use is: 56 acres located within the SE1/4SW1/4 and the S1/2NE1/4SW1/4Section 26, Township 25 North, Range 28 East, W.M., Grant County Washington; lying within parcel number 171554000. All lying within WRIA 42.

The locations of the proposed places of use are: 51.8 acres lying within SE1/4 SW1/4 and the S1/2 NE1/4 SW1/4, Section 26, Township 25 North, Range 28 East, WM, Grant County, Washington; lying within parcel number 171554000 and 24.2 acres lying within the S1/2 Section 21, Township 25 North, Range 30 East, WM, Grant County, Washington; lying within parcel number 181836000. All lying within WRIA 42.

Isaak Land Inc. also owns groundwater certificates G3-0884C (G3-0884C(B) to be included here) and G3-22021C that have similar applications to this application for 2802-A being processed. These three applications have five common points of withdrawal located in Sections 26 and 35. Additionally, these three certificates will be incorporated with certificates 1476-A, G3-01539C and G3-1352C(C) to irrigate portions of Section 21. It is intended that the three wells located in Section 16 will be utilized under all six of these certificates. The total combined quantities based on the current and previous changes would not exceed the following: 4113.9 gpm, 2459.7 acre-feet and 656.7 acres primary and 628.5 acres supplemental. Additionally there is 10 gpm and 2 acre-feet designated for domestic and stock-water supply.

Attributes of the water right as currently documented

Name on certificate, claim, permit: **J.W. Buob**

Water right document number: **2802-A**

As modified by certificate of change number: **NA**

Priority date, first use: **Priority Date May 20, 1957**

Water quantities: **Qi: 325 gpm Qa: 224 acre ft./ year**

Source: **1 well yielding from the Wanapum/Grand Ronde Aquifer System**

Point of diversion/withdrawal: **Well #1, being within the SE1/4SW1/4 Section 26, Township 25 North, Range 28 East, WM, Grant County, Washington; lying within parcel number 171554000.**

Purpose of use: **Irrigation – 56 Acres, Domestic Supply**

Period of use: **Seasonal Irrigation, Continuous Domestic Supply**

Place of use: **56 acres within SE1/4 SW1/4 and the S1/2 NE1/4 SW1/4 of Section 26, Township 25 North, Range 28 East, Grant County, Washington; lying within parcel number 171554000.**

Existing provisions: **See Existing Certificate**

Tentative determination of the water right

The tentative determination is provided on the front page of this report.

History of water use

This water right was issued in 1957 and has been continuously utilized in the irrigation of crops since that time.

With the use of center pivot irrigation the entire authorized acreage has not been irrigated during the most recent 5 year cropping history. Portions of a single part circle serves the existing place of use. The following is a breakdown of the acreages irrigated as determined by FSA, and the crops grown over that most recent 5 year period:

2007 49.9 acres of grass

2008 49.9 acres of grass

2009 52.0 acres of grass

2010 51.8 acres of peas

2011 51.8 acres of grass

Previous changes

None

SEPA

The Board has reviewed the proposed project in its entirety. This project is not subject to SEPA as the maximum pumping rate under all rights being considered does not exceed the threshold set for groundwater withdrawals.

The information or conclusions in this section were authored and/or developed by Thomas R. Buchholtz PE.

COMMENT AND PROTESTS [See WAC 173-153-130(6)(b)]

Public notice of the application was given in the Coulee City News-Standard on April 4 and April 11, 2012. The protest period ended on May 12, 2012. There were no protests received during the 30 day protest period. In addition, no oral or written comments were received at an open public meeting of the Board or other means as designated by the Board.

This application for change was distributed to the Eastern Washington Council of Governments, the Washington State Department of Fish and Wildlife, and the Washington State Department of Archaeology and Historic Preservation on July 16, 2012 by email.

No comments have been received.

The information or conclusions in this section were authored and/or developed by Thomas R. Buchholtz PE.

INVESTIGATION [See WAC 173-153-130(6)(c)]

The following information was obtained from a site inspection conducted by members of the Board, and the applicant on June 14, 2012 technical reports, research of Department records, and conversations with the applicant and/or other interested parties.

Proposed project plans and specifications

The acreage currently being irrigated under this water right is being served by 1 well and a portion of 1 part circle. The well is described in the Well Description Report Attachment. The well is located as noted previously.

It is the intention of the right holder to continue to utilize the portion of the existing part circle to irrigate the existing 51.8 acres located in Section 26. The system will be modified so that this parcel can be integrated into a larger project managed by the right holder. Four existing wells in addition to the existing authorized well will be utilized along with the associated pumps and pipelines to serve this parcel. New pipelines may be required to tie all the wells together. 24.2 acres located in Section 21 will utilize proposed center pivots to irrigate those acres. The specific orientation of those pivots has not been finalized. Three existing wells will be utilized along with the associated pumps and pipelines to serve this parcel. New pipelines will be required to serve the future center pivots. The breakdown of the pumps located at the individual wells is as follows:

Well 1 – 75 horsepower turbine
Well 2 – 100 horsepower turbine
Well 3 - 150 horsepower turbine
Well 4 – 100 horsepower turbine and 30 horsepower centrifugal booster
Well 5 – 100 horsepower submersible
Well 6 – 600 horsepower turbine and 150 horsepower centrifugal booster
Well 7 – 400 horsepower turbine and 60 horsepower centrifugal booster
Well 8 – 75 horsepower turbine and 30 horsepower centrifugal booster

The wells, pumps, center pivots and pipelines will be maintained and upgraded in the future to optimize irrigation efficiency.

Other water rights appurtenant to the property (if applicable)

Isaak Land Inc. owns groundwater certificates G3-22021C and G3-00884C(B) that have similar applications to this application for 2802-A being processed. Additionally these three certificates will be integrated with certificates 221-A, 2482-A, 5492-A, 2283-A, 2769-A, 1476-A, G3-01539C and G3-01352C(C) to irrigate portions of sections 26 and 21. The total combined quantities associated with these water rights shall not exceed 6413.9 gpm, 3387.7 acre-feet annually for the irrigation of a total of 888.7 primary acres and 628.5 supplemental acres, along with 10 gpm and 2 acre-feet annually for domestic and stock-water supply.

Public Interest (groundwater only)

The proposed transfer is subject to RCW 90.44.100 and therefore, cannot be detrimental to the public interest, including impacts on any watershed planning activities.

A recent Washington State Supreme Court ruling has stated that "...a 'public interest' test is not a proper consideration when Ecology acts on a change application under RCW 90.03.380." PUD No. 1 of Pend Oreille County v. Dep't of Ecology, 70372-8 (2002). By extension, neither does the Board have authority to apply a public interest test when evaluating a change in water right request under RCW 90.03.380. Previous legal review has indicated that the above court case is in reference to surface water changes/transfers, and groundwater-serviced water right changes/transfers are subject to public interest consideration under the purview and scope of the groundwater code. The Board concludes that the requested change/transfer is not contrary to the public interest governing water use. To the extent review of public interest is applicable, the Board finds that the application for change is consistent with public policy objectives of the state to provide for efficient use of water resources, to encourage supply of new or expanding uses through change/transfer of existing water rights, to provide greater operational control to water managers, and to ensure no impairment exists.

Because the proposed action will not increase the existing permitted water use, or increase the water put to actual beneficial use, or result in a measurable impact on other existing water rights or applications for new water rights, it does not change the existing status quo for water use impacts. Thus, no impairment is perceived, because of the change/transfer requested in the application. Water use is provided consistent with statutory requirements for beneficial use.

The proposed action does provide for a continuation of the existing beneficial use as stated within the permit of water right, increasing the economic benefits to the state and local area by allowing for continued use and development of irrigated lands. The development is taking place in the land-use management area of Grant County.

This action is consistent with the intent of RCW 90.03.380, 90.44.100, and 90.80 (amended May 10, 2001) and other applicable statutes; and it is consistent with Grant County's Comprehensive Land-Use Plan. No impairment is consistent with the public interest; all pertinent water right issues are addressed above; conditions are recommended within this ROE to further protect the public interest consistent with state water law.

The application for change/transfer is consistent with the public interest requirements for beneficial water use, and consistent with the procedural, technical, and legal review requirements by the state.

Tentative Determination

In order to make a water right change decision, the Board must make a tentative determination on the validity and extent of the right. The Board has made the tentative determination as displayed upon the first page of this report. Water right documents attempt to define a maximum limitation to a water right, rather than the actual extent to which a water right has been developed and maintained through historic beneficial use. Additionally, except for a sufficient cause pursuant to RCW 90.14.140, water rights, in whole or in part, not put to a beneficial use for five consecutive years since 1967 may be subject to relinquishment under Chapter 90.14.130 through 90.14.180 RCW. Water rights may additionally be lost through abandonment. The Board's tentative determination was based upon the following findings:

The water right applicant holds a valid water right in good standing, and it is on file with the Department. The Board confirms that the water right is being used subject to the existing certificate provisions.

The certificate is valid as stands, subject to subsequent change actions by the Board and any Department administrative changes affecting development.

Under the change request, the total amount of water withdrawal from the existing source cannot exceed the amount within the certificated water right. The change/transfer request must not exceed the existing water right limits; no enlargement of the water right is allowed.

The change/transfer request must be consistent with RCW 90.03.380, and related water code statutes. The required annual consumptive quantity (beneficial use) analysis indicates the following:

- **This water right has been certificated, and is in good standing.**
- **The water under this certificate is being beneficially utilized for the irrigation of crops. Continued beneficial use will be completed based upon the development schedule outlined in the "Board Decision" above.**
- **The Board has determined that the full amount of the said water right available for change/transfer is presented within the above "Board Decision" summary, and should be the amount not exceeded by the applicant within the proof of appropriation filing and within the final certificate issued by the Department. The applicant's request for a change is allowed under the water code and case law.**

Geologic, Hydrogeology, or other scientific investigations (if applicable)

Based on detailed technical review of the applicant's submittal, it is concluded that the requested change/transfer will withdraw water from the same body of water (and management area) as that allowed under the existing water right—and per applicant discussions with Department staff.

The added change cannot create impairment. The Board has reviewed the applicant's technical information on potential impairment, and concludes that impairment is not an issue for the water right change/transfer see the Impairment Analysis G3-00884C(A), G3-00884C(B), 2802-A & G3-22021C Attachment.

It is noted and concluded from existing WA State water law, Department water right data, the applicant's technical information (impairment analysis attached), and previous discussions with Department staff, that:

1) Impairment means that other water right holders are unable to use their water rights (whole or in part), given reasonable pumping lift with the construction of qualifying diversion works.

2) For this immediate area, no record/affirmation of impairment has been noted by the Board or Department.

3) The Department staff has not raised any impairment issues.

4) The Board has required the applicant to consider impairment issues for the applicant's change request, including technical consultations with the Board. There is no indication that the change action will impair other water rights. The Board has attached the formal impairment analysis prepared by a qualified professional engineer.

5) Based on the public notice of this change request, the Board has received no impairment issue comments from other existing water right holders, including those who withdraw water from sites close to the applicant's proposed well sites.

The Board concludes that the proposed action will not create impairment to other water rights per the provisions and conditions established under the existing permit/change order and the conditions provided within this ROE/ROD; impairment is not an issue for the specific action related to this water right change.

Annual Consumptive Quantity (ACQ)

The following ACQ analysis was run to determine what water has been put to beneficial use, and what water and associated acreage is available to be transferred and spread as per state statute:

For this determination the Washington Irrigation Guide (WIG) will be utilized to determine the Crop Irrigation Requirement (CIR), along with an irrigation efficiency of 90%. The result of the average of the two highest annual ACQs over the last 5 years will be compared to the 30" annual requirement that will be utilized in the future to determine water available to be spread. Wilson Creek WIG information will be utilized as the closest data source to the project. The previously noted crop history will be utilized in this analysis.

Circle	2007 Crops/acres	2008 Crops/acres	2009 Crops/acres	2010 Crops/acres	2011 Crops/acres
63	Grass/49.9	Grass/49.9	Grass/52.0	Peas/51.8	Grass/51.8

For this determination the Washington Irrigation Guide (WIG) will be utilized to determine the Crop Irrigation Requirement (CIR), along with an irrigation efficiency of 90%. The result of the average of the two highest annual ACQs over the last 5 years will be compared to the 30" that will be utilized in the future to determine water available to be spread. Wilson Creek WIG information will be utilized as the closest data source to the project.

Circle 63 **Grass CIR = 39.58" Peas CIR = 19.47"**

For crop years 2007 and 2008 the TIR would be:
49.9X39.58/.9/12=182.9 ac-ft

For crop year 2009 the TIR would be:
52.0X39.58/.9/12 = 190.6 ac-ft

For crop year 2010 the TIR would be
51.8X19.47/.9/12 = 93.4 ac-ft

For crop year 2011 the TIR would be
51.8X39.58/.9/12 = 189.8 ac-ft

The two highest water duty years are therefore 2009 and 2011, and the associated ACQs result in the following 2 year average:

Average – (190.6 + 189.8)/2=190.0 ac-ft

Certificated for 224 ac-ft, therefore currently utilizing less water than certificated

Total Acreage Currently Irrigated – 51.8 acres

Certificated for 56 acres, therefore currently irrigatingfewer acres than certificated

Water required at 2.5'/Acre– 2.5 X 51.8 = 129.5 ac-ft

Water available for spreading – 190.0 – 129.5 = 60.5 ac-ft

Spreadable acres based on water savings – 60.5/2.5 = 24.2 acres

Grand Total gpm – 325

Grand Total ac-ft – 190.0

Grand Total acres – 190.0/2.5=76.0

Additional acres – 76.0 – 51.8 = 24.2 acres

Acres in addition to certificated– 76.0 – 56.0 = 20 acres

Acre-feet relinquished – 224.0 – 190.0 = 34.0 acre-feet

The information or conclusions in this section were authored and/or developed by Thomas R. Buchholtz PE.

CONCLUSIONS [See WAC 173-153-130(6)(d)]

Tentative determination (validity and extent of the right)

The certificate of water right is verified and in good standing per Department records.

Relinquishment or abandonment concerns: **After performing the ACQ test under this application it has been determined that there will be an increase of 20.0 acres based on water spreading and a relinquishment of 34.0 acre-feet associated with this application.**

Hydraulic analysis

Based on detailed technical review of the applicant's submittal, it is concluded that the requested change/transfer will withdraw water from the same body of water (and management area) as that allowed under the existing water right—and per recent applicant discussion with Department staff.

The added change cannot create impairment. The Board has reviewed the applicant's technical information on potential impairment, and concludes that impairment is not an issue for the water right change/transfer (see attachment – Impairment Analysis).

It is noted and concluded from existing WA State water law, Department water right data, the applicant's technical information (impairment analysis attached), and previous discussions with Department staff, that:

1) Impairment means that other water right holders are unable to use their water rights (whole or in part), given reasonable pumping lift with the construction of qualifying diversion works.

2) For this immediate area, no record/affirmation of impairment has been noted by the Board or Department.

3) Department staff has not raised any impairment issues.

4) The Board has required the applicant to consider impairment issues for the applicant's change request, including technical consultations with the Board. There is no indication that the change action will impair other water rights. The Board has attached the formal impairment analysis prepared by a qualified professional engineer.

5) Based on the public notice of this change request, the Board has received no impairment issue comments from other existing water right holders, including those who withdraw water from sites close to the applicant's proposed well sites.

The Board concludes that the proposed action will not create impairment to other water rights per the provisions and conditions established under the existing permit/change order and the conditions provided within this ROE/ROD; impairment is not an issue for the specific action related to this water right change.

Consideration of comments and protests

There were no comments or protests received.

Impairment

There will be no impairment of existing water rights or the holder of those rights associated with this change. See Impairment Analysis G3-00884C(A), G3-00884C(B), 2802-A & G3-22021C Attachment.

Public Interest

The Board concludes that the requested change/transfer is not contrary to the public interest governing water use. To the extent review of public interest is applicable, the Board finds that the application for change is consistent with public policy objectives of the state to provide for efficient use of water resources, to encourage supply of new or expanding uses through change/transfer of existing water rights, to provide greater operational control to water managers, and to ensure no impairment exists.

Annual Consumptive Quantity (ACQ)

When the last 5 years of history has been reviewed the 325 gpm instantaneous rate has been affirmed. The annual acre-footage has been reduced to 190 acre-feet, and the acreage available to be irrigated at 2.5 acre-feet per year per acre has been increased to 76 acres.

Other

The board also considered the previous provisions associated with the water right as identified in the background section of this report when making its decision.

DECISION [See WAC 173-153-130(6)(e)]

The Grant County Water Conservancy Board hereby RECOMMENDS APPROVAL of the water right change/transfer described within this Record of Examination and Record of Decision as summarized in the Board Decision section of this report, and submits this report for conditional approval to the Director of the Washington State Department of Ecology.

The information or conclusions in this section were authored and/or developed by Thomas R. Buchholtz PE.

PROVISIONS [See WAC 173-153-130(6)(f)]

Conditions and limitations

The applicant's water right change is conditioned by all provisions of the existing 2802-A certificate. These include and are not limited to:

- **The total withdrawal under Certificates G3-00884C(B), 2802-A, G3-22021C, 221-A, 2482-A, 5492-A, 2283-A, 2769-A, 1476-A, G3-01539C and G3-01352C(C) shall not exceed 6413.9 gpm, 3387.7 acre-feet annually for the irrigation of a total of 888.7 primary acres, and 628.5 supplemental acres along with 10 gpm and 2 acre-feet annually for domestic and stock-water supply.**
- **An approved measuring device shall be installed and maintained for each of the sources identified herein in accordance with the rule "Requirements for Measuring and Reporting Water Use", Chapter 173-173 WAC. Water use data shall be recorded weekly and maintained by the property owner for a minimum of five years, and shall be promptly submitted to Ecology upon request.**
- **Department of Ecology personnel, upon presentation of proper credentials, shall have access at reasonable times, to the records of water use that are kept to meet the above conditions, and to inspect at reasonable times any measuring device used to meet the above conditions.**
- **The amount of water granted is a maximum limit that shall not be exceeded and the water user shall be entitled only to that amount of water within the specified limit that is beneficially used and required for actual crop growth on the number of acres and place of use specified.**
- **A superseding certificate of water right will not be issued until a final examination is made.**
- **The water quantities and uses recommended and/or the number of acres to be irrigated may be reduced at the time of issuance of a final water right commensurate with the capacity of the installed system and the uses and/or the number of acres actually irrigated.**
- **Nothing in this authorization shall be construed as satisfying other applicable federal, state, or local statues.**
- **All wells constructed within the State shall meet the minimum standards for construction and maintenance as provided under RCW 18.104 and Chapter 173-160 WAC.**
- **Use of water under this authorization shall be contingent upon the water right holder's utilization of up to date water conservation practices and maintenance of efficient water delivery systems consistent with established regulation.**
- **This authorization to make use of public waters of the state is subject to existing rights, including any existing rights held by the United States for the benefit of Indians under treaty or otherwise.**

Construction Schedule

The Applicant will begin the work required to fulfill the requirements of this change by January 1, 2013. Work will be completed to fulfill the requirements of this change by January 1, 2016. The water authorized under this change shall be put to full beneficial use by January 1, 2017.

The information or conclusions in this section were authored and/or developed by Thomas R. Buchholtz PE.

The undersigned Board Commissioner certifies that he/she understands the Board is responsible "to ensure that all relevant issues identified during its evaluation of the application, or which are raised by any commenting party during the Board's evaluation process, are thoroughly evaluated and discussed in the board's deliberations. These discussions must be fully documented in the report of examination." [WAC 173-153-130(5)] The undersigned therefore, certifies that he/she, having reviewed the report of examination, knows and understands the content of this report and concurs with the report's conclusions.

Record of Decision

Applicant: Isaak Land Inc. Application Number: 2802-A

This record of decision was made by a majority of the Board at an open public meeting of the Grant County Water Conservancy Board held on August 23, 2012. The undersigned board commissioners certify that they each understand the board is responsible "to ensure that all relevant issues identified during its evaluation of the application, or which are raised by any commenting party during the board's evaluation process, are thoroughly evaluated and discussed in the board's deliberations. These discussions must be fully documented in the report of examination." [WAC 173-153-130(5)] The undersigned therefore, certifies that each commissioner, having reviewed the report of examination, knows and understands the content of the report.

X Approval: The Grant County Water Conservancy Board hereby **grants** conditional approval for the water right transfer described and conditioned within the report of examination on August 23, 2012 and submits this record of decision and report of examination to the Department of Ecology for final review.

☐ **Denial:** The Grant County Water Conservancy Board hereby **denies** conditional approval for the water right transfer as described within the report of examination on August 23, 2012 and submits this record of decision to the Department of Ecology for final review.
