The project proposes to add two wells as authorized points of withdrawal and change the description of the place of use to include the area of the dairy currently occupied by cows. The two proposed wells have been determined to be in hydraulic connectivity with the two existing authorized existing wells. The existing wells have increasingly produced sand over the years, causing maintenance problems and increased cost of operation. The new wells will supplement or replace the decreasing yields from the two existing wells. Qa and Qi limitations on the permit will remain unchanged.
