PROVISIONS

All diversion shall cease when the flow of Tarboo Creek falls below 3.0 cubic feet per second as measured at the culvert under the road about 1050 feet East and 400 feet North of the Southwest Corner of Sec. 33, T. 28 N., R. 1 W.W.M. This flow has been tentatively established from recommendations of the departments of Fisheries and Game. At such time as flows are established on this stream in accordance with Chapter 90.22 RCW, or Chapter 90.54 RCW, this permit shall be conditioned to the extent of the new setting, provided that, under no conditions shall the permittee be subjected to a more restrictive low flow requirement.

A certificate of water right will not be issued until a final investigation is made.

The Water Resources Act of 1971 specifies certain criteria regarding utilization and management of the waters of the State in the best public interest. Issuance of this permit was based on sufficient waters available, at least during portions of the year. However, it is pointed out to the permittee that his use of the water may be subject to regulation at certain times, based on the necessity to maintain water quantities sufficient for preservation of the natural environment.

*This permit shall be subject to cancellation should the permittee fail to comply with the above development schedule and/or fail to give notice to the Department of Ecology on forms provided by that Department documenting such compliance.*

Given under my hand and the seal of this office at Olympia Washington, this.....24.....day  
of March....., 19.....81.....
