REPORT

BACKGROUND:

This application was received for processing and accepted for priority date on September 4, 1986. Public notice appeared in the Port Townsend Leader of Port Townsend, Washington on October 22 and 29, 1986. No objections were received as a result of the public notice.

The applicant seeks a permit under the provisions of Chapter 90.44 Revised Code of Washington to appropriate public ground water from an infiltration trench in the amount of ten gallons per minute (gpm) for single domestic supply.

INVESTIGATIONS:

A field examination of this request was conducted by the writer on April 8, 1987. The applicant was not present during the site visit.

The applicant's property is located at the southern end of Toandos Peninsula near Coyle. Land use in the vicinity is recreational and residential. There is a mix of seasonal and full time residential developments.

The applicant takes water from an infiltration trench covered by Ground Water Certificate G 2-25598 C. However, the applicant's property is not a part of the place of use described under said certificate.

The normal water requirements for a single family residence in this environment should not exceed an average of 450 gallons per day. This amounts to 1/3 acre-foot per year when calculated on an annual basis.

CONCLUSIONS:

In accordance with Section 90.03 and 90.44 RCW, I find that there is water available for appropriation from the source in question and that the appropriation as recommended is a beneficial use and will not impair existing rights or be detrimental to the public welfare. Therefore, permit should issue, subject to existing rights and indicated provisions.

RECOMMENDATIONS:

It is recommended this application be approved and a permit be issued allowing appropriation of ten gpm from an infiltration trench for the purpose of single domestic supply. The period of use shall be as needed year round. The total annual withdrawal shall not exceed 0.5 acre-feet per year. Approval shall be subject to the following provisions.

The water source and/or water transmission facilities are not wholly located upon the land owned by the applicant. Issuance of a permit by this department for appropriation of the waters in question does not convey a right of access to, or other right to use, land which the applicant does not legally possess. Obtainment of such right is a private matter between applicant and owner of that land.

Reported by: Sam Bailey

Date: May 11, 1987

The statutory permit fee for this application is \$5.00.
